1365B-December, 1945-s,

PREFACE

More than three years have passed since the publication of the first volume. The reasons for the delay are too obvious to need explanation. New materials on the subject must have appeared during this interval. I fully realise that there was scope for correction and improvement in both the volumes. But as a Security Prisoner I had no access to necessary material nor to any useful help. Readers will kindly accept this apology for errors and omissions.

As in the earlier volume my thanks are due to the journals which published much of the contents of this book, to the C. U. Press which printed this through the most painful and difficult times, to friends and professors who helped and encouraged me, particularly to Profs. H. C. Raychaudhuri, M.A., Ph.D. and B. M. Barua, M.A., D.Lit., for whose kindness I have no words.

Rajshahi Central Jail, July, 1945.

Cotal significance of city plan Medium of artistic, religious and instional

Long before Alyan migration, the non-Aryan settlers of India specialised in city building. Remains of their art arc sum in Malicujo dato and Harappa, with characteristically modern amenities like masonry drains and regular streets and baths. The Aryans were primarily an agricultural and pastoral people but whether they had come or not from the cities of Mesopotamia and Iran, they might not have been strangers to the city life. Without being good builders they could not possibly conquei the land from the original settlers who knew the use of fortified cities. Hence though Vedic and Brahmanical cultures are essentially

City building—non Aryan and Aryan rural, a natural consequence of the consolidation of the Aryan tribal system into

large states and kingdoms was the growth from the village

settlements into large cities planned on the same principles in which the different village units clustered around the royal palace or citadel The Epics present a large number of cities in the reader's horizon, dotted all over northern India from Assam to Afghanistan When Megasthenes visited India "the number is so great that it cannot be stated with precision " (Arrian, X) The Indian tract alone subdued by Alexander is reported by his companions to have contained as many as 5,000 towns, none less than Cos (Pliny, VI 17) 1

The science of town-planning is so ancient in India that its origin is lost in antiquity The treatise The science taste on vastuvidya and silpasastra, the Manavidya and filpasastra

sara, the Mayamata, the Yuktikalpataru, the Devi-Purana and works on political science like the Arthasistra and the Sukraniti all testify to its remote origin. The patronymic Visvakarma—the architect divine, apotheosised master-builders like Maya, Tvastar and Manu, the mythological genealogies attributed to them," the position of the master-builder as lingh-priest or sacrificial expert, all confirm the supposition 3 These and the position of the expounders of the science also prove that the social status of the civic architect was not low. The Mayamata avers that blue blood ran in his veins (abbijatavan).

¹ The list was probably compiled from hearsay including every township or defensive outpost raised to hold the airrounding area in check

¹ Viávakarmaprakáša Ch I

³ Some of the metal workers and carpenters of South India still retain the epithet 'acarya 'as il eir caste distinction See Havell Aryan Rule, p. 128

It is suggested that he descended in social estimation at least in the time of if e Mahabharata since Mays, the builder of Yudhistbira's council house is spoken of as a dunare being a non Aryan this possibly implies that the science having deteriorated an ong the Aryans there was a lack of competent experts among them The supposition is far fetchel The non Aryans being more advanced in the technique an expert of their race might well be summened in preference to one from the Aryan stock Se B B Datts Town I lanning in Ancent India, p 14

Treatment of the which signify its perfection These are (a) examination of soil (bhūparikst) (b) selection of site (bhūmisamgrahi), (c) determination of directions (dikparicchedi), (d) division of the grounds into squares (padavinyasa), (e) the offerings (valikarmavidhāna), (f) planning of villages and towns (gramavinyāsa, nagaravinyasa), (g) buildings and their different storeys (bbumividhana), (h) construction of gateways (gopuravidhana), (i) eonstruction of royal palaees (rājaveśmavidhāna). It will be noted that the construction of Dvalāvatī inder the direction of Kisnianswers

to these plans and procedures (Devi-P., Vis. P., ch.

58)

The towns were generally grown out of villages 7 The plan of the Indo-Aryan town fairly Origio of cities 1 From expansion of reproduces on a grander scale the plan of the village Thus Cthe terms gama and nigama are often indifferently used I The following story about the origin of the Kuru city of Kammasadamma is illuminating "He (Bodhisatta) had a vast lake constructed near the Banyan tree and transported thither many families and founded a village It grew big place supplied with 80,000 shops And starting from the farthest limits of its bianches he levelled the ground about the roots of the tree and surrounded it with a balustrade furnished with arches and gates, and the spirit of the tree was propitiated And owing to the fact of the village having been settled on the spot where the ogre was converted, the place grew into the nigama of Kammasadamma '' (Jat V 511) The difference between a gama and a nigama is thus one of degree

These different circumstances of their origin explain the diversity in character of Indian cities D verse types of There were pattanas or sea ports There ent es were nigamas or market towns situated on tride routes 1 There were viharas or university towns. temple cities forts with bastions and battlements termed durga A medley of other names are given in the silvasastras, viz, nagara rajadhani, kheta, I harvata, sivira, senamul ha slandhavara, sthaniya, dronamukha, kotma lolaka and so on The cities also varied in shape-square or rectangular circular or elliptic, lotus like or bow shaned each having technical appellations for its variety, and each

public pinces and buildings 2 Thus quite promisevously village settlements might outgrow their rural frameworl and attain to

with the peculiar planning of streets and distribution of

importance Despite their natural growth, The glanged city pro pla of pla ping at certain stages they underwent the skill of a scheming technician For example. to provide for increasing population and traffic, to improve the defences and broaden the streets, the ruler had to call for the civic engineer (sthapati) Besides there are detailed instructions laid down in the sulpasastras and concrete instances in other literature, of eities founded with a deliberate planning at the very inception. The rules for the guidance of the builder demanded the pre paration of maps indicating density of population in different parts, allocation of sites for castes and professions, distribution of residential, business and industrial areas, of parks and squares with space. When improving or extending existing towns be has to nirl e his project without violently dislocating the existing order and with a

¹ I terally niger a means a trade-rowte 1 See D tt. Town Pistening in An 1 pt Inl a C1 s VIII VI

consideration for temples, buildings and water-works of importance. As soil specialist he has to survey the ground for its fertility, solidity and mineral resources: if the city is on river or on sea he has to study the probability of diluvion or erosion. He has to survey general traffic, sewage and water-supply, strategic points of offence and defence, folks in the neighbourhood, trees and plants suitable for culture and vendal beautification and all possibilities for the sanitation and aesthetics of the city. This would meet the demands of current political concepts. The capital ought to have the advantages of the hills, plains and seas, command vegetable, animal and mineral resources and be a centre of quick commercial activity. It should he on river hank if not on sea-shore, surrounded by walls (prākāra) and ditches (parikhā) with four gates in four directious, provided with wells, tanks and pools, good roads and parks in roads, and well-constructed tayorns, temples and inns for travellers (Sukraniti, I, 425-33). This is not an idealistic utopia but clearly recalls the numerous city descriptions given in Pali and Sanskrit works. Indian architecture further lays down technical instructions as to road-making, e.g., that they should be like the back of a tortoise, i.e., high in the middle and sloping towards the sides where they are provided with drains and that they should be regularly watered and gravelled and repaired every year (I, 531- 37).13

The real was not at all out of this standard. The lay-out of Indian cities from the far off Sākala in the Punjah to the distant Campā in Anga is realistically set forth in popular stories with minute details.

¹ The necessity of watering roads and keeping them clear was fully reslised. The streets of Ayothya were regularly watered. Dropping filth on king's highroad is to be fined with 2 karjapanas and the filth immediately removed by the offender. Manu, 1X 282.

"Just as the architect of a city, when he wants to build one, would first search out a pleasant spot of ground, with which no fault can be found, even with no hills or gullies in it, free from rough ground and rocks, not open to the danger of attack. And then when he has made plain any rough places there may still be on it, he would clear it thoroughly of all stumps and stakes, and would proceed to build there a city fine, and regular, measured out into suitable quarters, with trenches and ramparts thrown out around it, with strong gateways, watch towers and battlements, with wide squares and open places and junctions (where two roads meet) with clean and even highroads, with regular lines of open shops, well-provided with parks and gardens and lakes and lotus ponds and wells, adorned with many kinds of temples to the gods, free from every And in course of time that city might become mighty and prosperous, filled with stores of food, peaceful and glorious, happy, free from distress and calamity, the meeting place of all sorts and conditions of men Bialimanas all these coming to take up their residence there, and finding the new city to be regular, faultless perfect and pleasant

Yatbā nagarav.iddhaki nagaram ināpetuk.amo pathamam tava samam anunnatam-anonntam asakkharapāsanam nirupaddavam anavaijam ramnījam hhumibbagam anuviloketva yam tattha visamam tam samam karapetvā khānukantakam visodbāpetva tattha nagaram māpeyya solihanam vibhattam bhagaso mitam ukkinna parikhapākāram dalllagopur-attala-kottakam puthu--caccara-catukkasandhi singhātakam suci samatala-rajamaggam suvibhatta-antarāpanam aram nyyana-talaka-pokkbaranī-udapana-sampannam bahuvidba-devatṭbāna-patimsanditam sabba-dosavirohitam..... atba tam nagaram aparena samayena iddham bhaveyya phitam subhikkham kbemam samiddham sivam anītikam irrupaddavam nanajana samākulam... tam nagaram vāsaya upagatā nānāvisayino janā navam suvihhattam adosam-navajjam ramanīyam tam nagaram passitvā...... (Mil. 330 f; cf. 34, 1 f.)

The city of Indraprastha laid out by Maya for the sons of Pāndu, the city of Dyārāvatī reconstructed by Visva-karmā under the orders of Srīkṛṣṇa are concrete instances of such planned cities which were no promiscuous growth. Another picture gives:

"Behold..... a city furnished with solid foundations and with many gateways and walls and with many pleasant spots where four roads meet. Pillars and trenches, bars and bolts, watch-towers and gates......

"See various types of birds in the roads under the

gateways.....

"See a marvellous city with grand walls, making the baira stand erect with wonder, pleasant with banners upraised, and with its sands all of gold,—see the hermitages divided regularly in blocks, and the different houses and their yards, with streets and blind lanes between.

"Behold the drinking shops and taverns, the slaughter house and cooks' shops and the harlots and wantons.....the garland weavers, the washermen, the astrologers, the

cloth merchants, the gold-workers, the jewellers.

"Crowds are gathered here of men and women, see the seats tiers beyond tiers............ See the wrestlers and the crowd striking their doubled arms, see the strikers and the stricken....." (Jāt. VI 276.)

The walls and ditches of the city with its helt of stately trees presented the town a solidarity and corporate entity and prevented the mushroom growth of clumsy outskirts about them. But these defensive works stood on the way of easy expansion. This might he one of the subsidiary reasons which led to the later exclusion of the untonchahles and pariahs outside the city gate. The commonest method of town extension,

as in the case of Diviravati, was to disminite the old wills, fill up the moats and erect a new boundary. As this was expensive and laborious, sometimes a ward or sub-town was built adjoining the wall of the main city-which occasionally equalled in eminence or even eclipsed the original one. The city of Puri is supposed to have once possessed such a sub-town the ruins of which are still existing. Kaveripaddinam is said to have been originally divided into the two parts of Maruvur Pakkani and Paddini Pakkam. Girihhaja and Rajagaha probably offered a similar instance.

At the time of Buddha, the six great cities of India six greatetes (that is to say, the provinces which are now the United Provinces and Bihar) enumerated in contrast to a khuddal anagara or sul hanagara were Campa, Rajagaha, Savatthi, Saketa, Kosambi and Baranssi which were in Ananda s estimation proper places to receive his Lord at the time of nibbana (Mahaparinibhana Sutta)

Campa was the capital of Anga, the country to the east incomparison of Magadha. Its sate is discovered at modern Bhagalpur. It lost its indepensable of Magadha under Bimhisara which appears to have never heen regained. According to Hemchandra's Sthaviravali and Parisistaparva, after Bimbisara sidenth Alatasatru made Campa his capital, but his son shifted to the newly huilt city of Pataliputra (Canto VI). In the Anusasanaparva it is said that the city was surrounded hy groves of Campaka trees (42). The Jatakas represent it as equipped with gates, watch towers and walls (dvarattalal apal ara, VI 32). Huen Tsang witnessed these walls and the vestiges of the mound on which they stood are still existing surrounded hy a ditch on three sides and by the Ganges in the north. It

was sacred to the Jamas too as Candrahapuri or Candrapuri It was a great emporium whence carryon started with 500 cartloads of wares (Jat. IV. 350)

Saketa was another important Kosala city and sometimes its capital (Mahavastu, I 348, Jrt III 270). Its site has been discovered in the Unao district of Oudh. Its identification with Ayojiha is doubted by Rhys Davids, for both are mentioned as existing in Buddha's time. The present city of Ayodhya is according to him at a corner of Sakota. "They were possibly adjoining, like London and Westminster." But in the Ramayana and in Kahdasa's Raghuvaman Sileta has been explicitly called the capital of ling Dasartha although that position is habitually attributed to Ayodhya. The city must have had two names which are indiscriminately used both in Pah and Sauskrit.

Ayodhya is unimportant in the Pali canonical works and is not observed in the Mahabharata Ramayana, it buts in with the full grandeur of a metropolis Situated on the banks of the Sarayu, it was a well-fortified city, protected on the other sides by a deeply excavated moat kept continually filled with water, 12 yojanas in length and 3 yojanas in breadth Dasaratha multiplied its habitations (purim avasayamasa) The city had fine wide streets full of traffic, symmetrically arranged, regularly watered and occasionally strewn with full bloomed flowers It had massive gates, was intersected with small crossways (snvibhaktantarapanam) equipped with mechanical contri vances and arms (sarvayantrayudbavatı), inhabited by all sorts of mechanics (sarvasilpi) provided with dramatic parties (bahunataka samghaisca samyul tam), fitted with parks and mango gardens and encircled by a line of big Sala trees

The fronts of its buildings were harmoniously arranged (sunivesity-ve/mantam). It was frequented by merchants from different countries and garnered with paddy and rice (I 5 9 ff). It had the auspicious shape of a bow, the string being along the river (Kāhkā Purana, 84, 237 f) ¹ Sāketa is referred to as Sagoda by Ptolemy (2.25)

Kosāmhi was capital of the Valsas or Vamsas (Jāt
IV. 28, VI 236) on the Jamunā Its
king was Udajana whose elopement and
marriage with Vasavadattā, the princess of Avanti form the
theme of a dramatic legend "It was the most important
entrepôt for both goods and passengers coming to Kosala
and Magadha from the south and west."

Baranasi, situated at the confluence of the Ganges and the Gumti (Mbh XIII 30) was the capital 6 Baranası of Kası which, at the time of Buddha, formed part of the kingdom of Kosala It was a seat of Buddhist learning and philosophy, remains of which are scattered at Sarnath But when Hiuen Tsang visited the eity, "there were twenty Deva temples, the towers and halls of which are of sculptured stone and carved wood. The foliage of trees combines to shade (the sites), while the pure streams of water encircle them " Luke Taxia it fafer attrined the fame of a university town. Although at the time when the Jatakas were composed it was a centre of learning of some standing (I 436, 447, 463, III 537). students had to travel all the way to Taxila from Benares for the higher courses of sippus and vijuas At that time it was a great centre of industries (I 98) and a big and prosperous city, 12 yojanas in extent (II 402)—pakaraparikkhepo

In the Manasara and the Mayamata this design of a village or town is called Karmuka

² Rhys Davids loc cit

dvādasayojaniko hoti, idam assā autarabāhiram pama tiyoinnasatikarattbani (I. 125).

Ananda's list is far from exhaustive; and even in

Buddha's time, in the Madhyadesa itself,
the cradle of his faith, there were other

eities which could elaim rank with the aforesaid ones. Vesāli, the capital of the Vajjis, a powerful confederation of republican tribes was situated in the Muzaffarpur district (Basarb) on the left bank of the Gandak (Ram. I. 1). It is said to be three yajanas north of the Ganges and five yojanas from Rajagaha (Com. on Sut. II. 1). The Jatakas aver that in Buddha's time it was a highly prosperous city (paramasobhaggapattam) encompassed by a triple wall each a yojana distant from the next, having three gates with natch-towers (I. 504). According to the Mahavagga, "at that time (Buddha's) Vesāli was an opulent (iddhā), prosperous (phita), populous (babujana) town, crowded with people (ākinnamanussā), abundant with food (subbikkhā). There were 7,707 storeyed buildings (pasada), 7,707 pinnacled buildings (Lūfāgāra), 7,707 pleasure grounds (ārāma), 7,707 lotus ponds (polkharani)" (VIII. 1), The prosperity was no doubt eclipsed by Pataliputra when Alatasatru annexed the land of the Vaijis to Magadha and built the new city to hold them under subjection.

In the same district of Muzasiarpur has been located the city of Mithila (Janakpur), capital of Videha, said to have been seven yojanas in extent (circumference? sattayojane mithilanagare, Jāt. III. 365, IV. 315, VI. 246). It was undoubtedly a big and opulent city, for at its four gates there were four nigamas or wards called the East Town (pācibayavamajjbaka), the Soutb Town, the West Town and the North Town each inhabited by wealthy merchants (setthi, anusetthi, VI. 330 f). In the Mahaummaga Jātaka it is said that a kiug dug three moats round it,—a water-moat, a mud-moat and

a dry-moat. The great Videhan king Janaka ruled in this city.

According to a long versical narrative, Mithila was spacious and splendid (visālam sahhatopahham), divided into well-measured blocks (vihlattam hhāgaso mitam) having many walls and gates (bahupākāratoranam), strong towers and palaces (dalhamattalakotthakam), intersected by hig roads (suvibhattam mahāpatham), laid out with shops at regular intervals (suvihlattantarapanam), thick with traffic of carts and chariots (gavassarathapilitam) beautified with parks and gardens (ārāmavanamālinim) (Jāt. VI. 46 ff). The account of the Mahahhārata is closely similar. The city was ruled over by Janaka and "adorned with the flags of various guilds." It was "a beautiful town resounding with the noise of sacrifices and festivities," "furnished with splendid gateways, abounding with palatial residences." "Protected by walls on all sides, it had many splendid buildings to hoast of. That delightful town was also filled with innumerable cars. Its streets and roads were many and well laid and many of them were lined with shops. And it was full of horses and cars and elephants and warriors. And the citizens were all in health and joy and they were always engaged in festivities" (III. 206. 6-9.).

Kapilavastu was the headquarters of the Sākyas another republican tribe, and the birth-place of Buddha. It comprised of several villages or wards, of which one was Lummini, where Buddha was born and which is identified with Rummindei where Aśoka's Pillar Edict records the commutation of bali and reduction of bhāga to 1/8 for the villagers. Kapilavastu is located in Gorakhpur district on the border of Nepal and the United Provinces from archæological disdoveries and

¹ The Arthasastra enjoins three ditches round a city (II 3) The Bevi Purana says that the number should be according to the requirements of the ground (72 28)

submitted to Alexander when he invaded it. Under the Mauryas it remained a viceregal centre, a large city and governed by good laws (Str. XV. i. 28). After them it was successively the capital of the Bactrian. Saka and Pahlava kings. Arrian describes the city as great and wealthy (V. 8) and as the most populous that lay between the Indus and the Hydaspes. Strabo tells the same thing and with Hiuen Tsang praises the fertility of its soil (XV. i. 17, 28). The latter notices its springs and water courses which account for this fertility. Pliny calls it a famous city, and states that it was situated on a level where the hills sank down into plains. Near the middle of the 1st century A.D. Appollonius of Tyana and his companion Damis are reported to have visited it and Philostratos the biographer described it as heing about the size of Nineveh, walled like a Greck city and the residence of a sovereign. The city was "divided into narrow streets with great regularity" reminding the travellers of Athens. There was also a garden, one stadium long with a tank in the midst filled with cool and refreshing streams. Outside the wall was a heautiful temple of porphyry, wherein was a shrine round which were hung pictures on copper tablets representing the feats of Alexander and Poros (Priaulx's Appollon., pp. 13 ff).

pp. 18 ff).

The valley in which the remains of Taxila lie,

is a singularly pleasant one, welltages watered by the Haro river and its
trihutaries, and protected hy a girdle of
hills; on the north and east by the snow-mountains of Hazra
and the Murree ridge, on the south and west hy the
well-known Margalla spur and other lower eminences.
"This position on the great trade-route which used to
connect Hindustan with Central and Western Asia, coupled
with the strength of its natural defences, the fertility
of the soil, and a constant supply of good water,

vogue from some other origin 1 The name may have been derived from the elephant-tusk or ivory for which Kalinga was famous (Aith I 2). The city has been identified by Cunningham with Rajamahendri, and by others with Puri It may more plausibly he placed at Dantan on the Kasai in Midnapore district At the time of Kharavela the capital was removed farther sonth where the new city of Kalinga (Mukhalingam and adjacent ruins in the Ganjam district) was huilt and a settlement of 100 masons was created free from revenue, ohviously for fuither heautification of the city (Hathigumpha In)

Mathura (a little south of modern Mathura) on the Jumpa, the capital of the Surasenas was the reputed birthplace of Krsna and the scene of his juvenile 15 Mathura adventures In Buddha's time it is harely mentioned while in the Milinda it is reported to he one of the famous places in India (331) Hence "the time of its greatest growth must have been hetween these dates "2 Pliny knows the city Arrian knows it as a great city and Ptolemy as 'the city of the gods' This is a cogent observation for under the Kusanas it hecame the seat of Jaina religion and learning and dotted with numerous sculptures and votive inscriptions The Uttarakanda of the Ramayana records that Satrughna founded it after slaying Lavana, that it stood on the Jamuna the shape of a half-moon, " that its land was fertile and productive, that its shops teemed with merchandise, that its buildings were reconstructed and parks and squares laid out and that it flourished with brisk husiness transactions carried out hy merchants from

¹ Cf bow under the influence of Buddhist legenda Taksasila (hewn rock) became Takasáira (serered head) and Ad cebatra (Adi a Parasol) became Abacchatra (parasol of 2 Rhya Davida Buddhist India

³ Cf Ayothya and the harmuka des gn Ardhacandra as not crescent

different countries (83. 9 ff). The Harivamsa confirms the same report stating that it was like a half-moon along the Jamunā, that it was rich in gardens and groves (udyānavanasampanna) aud decorated with ramparts and turrets (chayātṭālaka keyūrah) (Viṣnuparva, ch. 54). "It was sufficiently famous for the other Madhurā in Tinnevelly first mentioned in the Mahāvamso to be named after it."

Dwārakā or Dvārāvatī said in the Mahāhhārata to have heen founded by Srīkrṣṇa hy renovation of the old sea-coast eity of Kuśāsthalī is perhaps of later growth like Mathirā. Yule and Lassen have identified this with the Baraea of the Periplus and Barake of Ptolemy (I. 94) on the tip of the Kathiawad Peninsula the gulf whereof was very difficult for navigation (40). The Harivamsa describes the construction of the city in great details. When Srīkṛṣṇa communicated bis plan to the chief architect Viśwakarmā, he suggested a further exténsion for the accommodation of the citizens. Srīkṛṣṇa proceeded withhis own and realised his

Its plan. error after a few years. A new scheme was initiated and the municipal area extended to 12 yojanas × 8 yojanas. Old walls were dismantled and old ditches dumped. The surrounding area was cleared and prepared for the extension. Stikisha gave instructions that building plots were to he properly spaced, triangular and quadrangular 'islands' were to be created on the crossways and other suitable spots; the main thoroughfaises were to he measured up, the orientation of huildings ascertained. Thus ordered, the Yadavas selected the site, measured up the boundary lines, divided the plots and on an auspicious day made offerings to the presiding detties of the vāstu. Then

¹ The James thus appear as a mercantile community even in the early Christian continues.

² Rhys Davids . Buddhist India.

Krsna reiterated his instructions and laid special stress on the establishment of temples. The orders were carried out and special sites reserved for trees. The original city had its traffic mainly through lanes and bye lanes (rathyā-koti-sahaxadhya). In the enlarged city there were eight main roads—four latitudinal, four longitudinal—surrounded by a houlevard Sixteen public squares were erected at the sixteen cross-sections. The city was hedecked with reservoirs of pure water troughs and sheds for drinking water, parks, orchards and gardens. Fortifications were built and ditches excavated around it which looked as wide and deep as the river Ganges. Defensive weapons and missiles were stored in large number (Visnuparva, chs. 58, 98)

The veracity of these minute details may be doubted with regard to the city of Dwaraka, but by no means with regard to the general principles of town planning. The building of the Kuru township of Kammasadamma as described in the Jataka story and already quoted, reflects the same principles in their original and nebulous form. The silpasastras develop the same principles into a civic science and the builders of an age of progressive urhanisation gave effect to them with ingenious additions to meet the military, economic, religious, sanitary and aesthetic requirements of the times. Such radical reconstructions as described in the Harivamsa and in the theoretical works also presuppose a

Control of Mon cipal authorities large control on private owners, more extensive than any modern improvement trust can boast of No private interest

was allowed to stand on the way against what was conceived as a public necessity

The Sukrania says that private ownership abould not be allowed in towns Plots of ground were allotted to persons doring the r life time only for laying out gardens and erecting houses thereon. Ch. II. II. 491.04

As Dwārakā was built by the divine architect Viśwakaımā under the orders of king Srikrsna, 17 Indraprasths so the city of Indraprastha was constructed by the demon Maya at the requisition of king Yudhısthira. At the site eleared by the conflagration of the Khandava forest, on the banks of the Jamuna arose the stately eity defended with sea-like ditches and sky-scraping parapets and adorned with gates, towers and palatial buildings. There was a fine lay-out of large thoroughfares. There were magnificent houses, pleasant retreats, fine museums, artificial hills, numerous tanks brimming with water, beautiful lakes fragrant with lilies and lotuses, and lovely with varieties of birds, many charming parks and gardens with tanks at the centres and numberless fine ponds (Mbb. I. 217). Ptolemy notices this city as Indabara (I. 49).

Sāgala or Sākala identified by Fleet with modern Sialkot in the Lahoro division is said to bave been the capital of Madra (Jāt. IV. 230).

It was ruled over by the Madra king Salya, the brother of Pandu's wife who participated in the Bhārata war (Mhh. II. 32). It was also ruled over by king Aśwapati, father of Sāvitrī (Matsya Purāna, eh. 206). Gunningham says that it was Alexander's Sangala which is known to have offered him a stout resistance, although the position disagrees with that assigned by Alexander's bistorians. It was the eapital of the Greek king Demetrius after his expedition from Baetria and of his successors down to Dionysius. It is referred to as Euthydemia by Ptolemy (I. 46). It undoubtedly rose to the aeme of its glory under king Menander. The Milindapañho opens with a full-throated description of the Yona city which is quoted at the beginning of this Book and which substantially recalls the

picture of Dwaraka and elahorates upon those of Vesali, Indraprastha and other cities

With the city of Pataliputra we pass the quicksands of legends and folklore and tread on firmer 10 Pātal putra historical ground. The stages of its evolution are not shrouded in the midst of Epic and Puranic traditions In the earlier Pali literature, supposed to be contemporary of Buddha, it is referred to as Pataligama But it had great strategic and commercial value, situated as it was on the confluence of the Ganges and the Son (Erannoboas or Hiranyavaha) one of its largest tributaries. It was near to the land of the Vajjis whose capital Vesali was conquered by Ajātasattu Hence the Magadhan king deputed his astute ministers Sunidha and Vassakira to convert it into a fort in order to hold the Valus in check (My VI 28, Jatakas) His successor Udayın removed from Rajagaha to this new city Thenceforth Pataliputra remained the holder of imperial tradition under the successive dynasties of Saisunaga, Nanda, Maurya, Sunga, Kanha, Andhra and the Gupta After the Guptas Kanaul competed with it and finally it was completely overshadowed by the parvenu When Fa-hien visited it, it was still like "the work of genii beyond the power of human skill " But in Hiuen Tsang's time all that remained of the splendid metropolis were heaps of debris and an insignificant village consisting of about 200 or 300 miserable houses The city thus, after a shining career of roughly 900 years sank within a century to the oblivion from which it arose in the brief space of a few decades

According to Megasthenes, Palibothra was the greatest city in India, the shape of a parallelogram, 80 stadia along the river and 15 stadia in breadth, encompassed with a wooden wall (the remains of which have been unearthed and preserved), pierced with loop holes for the discharge of arrows, crowned with 570 towers and 64 gates, which was

surrounded by a ditch 600 feet wide and 45 feet deep for defence and for receiving the sewage of the city. The royal palace situated in the centre, surpassed the splendour of Susa and Echatana (Sti XV i 35 f, Arrian, 10). Ohviously it attracted from all northern India its overland and river-home trade. It is recorded from the mouth of Buddha that as far as Aryan people resort, as far as merchants trivel, Pataliputra will be the premier city, a centre for the interchange of all kinds of wares (yāvatā Ānanda, āryam āyatanam yāvatā vanippatho idam agganagram hhavissati. Pataliputtam putabledanam, Dn. XVI i 23). The 'prophecy' was evidently interpolated in a day when Pataliputra was no longer a fishing village but the univalled metropolis of Magadba.

Tosalı has been decisively located with the finding of the

name in the Asoka inscriptions on the
Dhauli rock Vestiges of a larger city
have been discovered not far from the site of the monument
and it is almost certain now that this was Asoka's capital in
the province of Orissa. It probably continued to be so till
the time of Ptolemy who called it a metropolis but wrongly
placed it to the east of the Ganges thus misleading Lassen
to locate it somewhere in the province of Dhakkā. The
city stood on the margin of a pool called Kośala-Gangā and
probably bence the compound Tośala-Kosalakas in the
Brahmānda-Purāna (ch. 51) as suggested by Wilford.

Kalhāna the chronicler of Kashmir says that the city of Srinagari in Kashmir was built by Aśoka which was most important on account of the 96 lacs of houses resplendent with wealth (Rāj. I. 104). Cunningham identifies this with the present village of Pandresthān (Purānrdliusthāna or old capital) on the right bank of the Vitastā some 3 miles ahove modern Srinagu.

sunk down to non-entity and some to oblivion with amazing rapidity leaving behind nothing but the name and dilapidated bricks to recall their glory The list is fai from comprehensive for our space and period. It is impossible to disentangle the identity and origin of the innumerable cities from their mythic cobwebs. But the foregoing account may help to give a general picture

Social significance of town planning

of cities of which there is a marked uniformity over the differences of time and

place, and of the various conditions of their development, tiz, military, demographic, industrial and commercial The city architecture also brings forth the social life of town dwellers. The richer people, the military and mercantile magnates resorted to cities in large numbers and at their behests the artists poured their skill on public buildings to give expression to the happy life, the traditions and ideals of their masters. They decorated the temples, stupus and caves with relief sculptures presenting pictorially the soul stirring episodes from the career of Rama, Buddha. Hanumat, Kisna, Siva, Visnu and other

of towns

Educative influence divine or sacred lives The epies, legends and folklores of the land were an mexhaus-

tible store of material for these artistic, religious and martial expressions. These impulses combined with the national ideal which, blazoned forth from the public buildings inculcated humanising and ennohling sentiments The mute walls and colonnades of these buildings were thus great educative agents disseminating national culture Besides heing the nurseries of corporate ideals and military and artistic endeavours Indian cities were great schools of nationalism in its most liberal and comprehensive sense It was this characteristic which gave a peculiar stamp to Indian civic life and gave Indian cities its distinctive mark of individuality which evoked the wonder and admiration of their visitors

CHAPTER II

THE MUNICIPAL CORPORATION

The village and the town No sharp cleavage Historicon Symplicity and uniformity or complexity and diversity

Extension of cooperation Charitable and religious artistices Aldermen Municipal administration —bureaucratic and democratic control Municipal functions

The corporate person Public piaces and civic amenities

As explained in the previous chapter, the town was an automatic, organic growth from the rullage. This is proved not only by the plan of the city or village given in the sulpasastras and the external features like gates, walls and public works in the description of both, methods of local government, public institutions and popular customs as seen in the para or nigama are mostly logical developments from those in the gama

There was no complete cleavage between the town and countryside But the antiquity of the Sauskrit words 'paura' and 'panapada' show that a distinction bird appeared early. In the Jatahas janapada and negama are often compounded (III 513, IV. 262, 449, V 221, VI 15, Mil 121). To the townsfolk the village churl, the man from the dchāt was a different social category although relations were not always had We come across mitrimomal transactions between the two parties sometimes successfully performed (Rājagahasettlin attano puttassa janapadasettlino dbitaram ānesi, IV 37) and on other occasions bioken down when the parties

(nagaravasıno, janapadavāsıno) fell to abusıng each other (I 257) Tıade transactions were also there —Savattlınagaravāsī kīr'eko kutumbiko ekena jānapadakutumbikena saddhim voliāram akası (II 203)

The essential difference was in the economic structure of towns and villages The villages were Economic disparity the productive units of the country given to tillage and small handicrafts. The towns were centres for distribution and exchange, of big business and industrial combines where, hesides its own wealth, the wealth of the eduntry accumulated and attracted in its turn learning and culture as well as luxumes and parasite professions like stage-acting, dancing, singing, buffoonery, gambling, tiveinkeeping and prostitution. The more sophisticated, luxurious and heterogeneous habits of the town are therefore apparent. This is clearly brought forth in the Arthasastia chapter on Janapadanivesah or foundation of villages. No guilds other than local co-operative guilds are allowed entrauce into them Nor are there to be public halls (salah) for disport and pleasure. Actors, dancers, singers, music-players, buffoons (vagjivanas) and bards (Lusilava) are not allowed to enter for profit and disturb the work of villagers who being helpless are always bent upon their field (mraśrayatyat gramanam ksetrabhnatatvat, I 1) The jealous attempt to gnard agriculture against the corrupting diversious of the town shows elearly that there was a deep-seated difference and loss of contact in town life and country life, thanks to which Megasthenes observed that "busbandmen themselves with their wives and children live in the country and entirely avoid going into town" (Diod II, 40)

But the transition was gradual, and not all the wholesome features of the gāma were lost in the process. The hest part of it was the translation of the rural associate life to a civic consciousness and to the idea of a minicipal corporation with all its legal consequences.

In its corporate life and co operative activities the nigama is a replica of the gama described above 1 Only we find the spirit of co operation Corporat on of towns streets and wards extended from the village whole to the streets and wards of the municipality "That the street is a kind of club, the very architecture, with its verandas and stone couches hear witness in This co operative effort was the mainspring of philaothropic and religious activity Street corporations (vithisablagena), municipal wards and sometimes all citizens collectively at Savatthi and at Rajagaha (ganabandhanena bahu ekato hutva, sakalangarayasino chandakam samharitya) were active in the entertainment of Buddha and the Brethren (Jat. I. 422. II 45 196 286) 'On this occasion all the inhabitants had made such a collection of all necessaries, but counsels were divided some demanded that this be given to the heretics some speaking for those who followed the Buddha then it was proposed to divide on the question and accordingly they divided, those who were for the Buddha were in the majority 3 We have noticed the gothi of the Sanchi and Bhattiprolu inscriptions meaning thereby

table institutions "At Benares free education and board were voted by the town to penniless Inds' (Jat 1 239, 451) We find a market town where a great deal of nice was distributed by ticket and special meals were given (eko nigamagamo tattha bahumi salikabhatta pikklinka hibattani atthi, Jat II 209) Service of humanity was placed in the fore front of the

municipal piogramme Charitable dispensaries and hospitals meant for the poor and the helpless are observed and described in detail by Fa-hien in several cities of the eastern countries

This and other aspects of corporate activity and the growth of the corporation as a legal body are limited at in a Jātaka verse and lucidly explained in the commentary. Although this comes with reference to the pāga a corporate body which cannot be strictly identified with a town corporation, it can be taken as farily indicative of the functions of the latter since the puga was not exactly a craft-guild and represents a synthesis of larger interests as happen to exist side by side in towns. They appear in hell in a fiery pit who raise a loan on behalf of the corporation and under false pietences misappropriate the money.

Ye keci pugāyatanissa hetu sakkhim kriitva inam jāpayanti, IV 108

Commentary —Okāse satī danam vā dassāma pujam vā pavattessāma vilaram va karissāma samkaddhītvā thapītāssa pūgasantakassa diranassa hetu, Japayantīti tam dhanam yathīrucim khīdītvā gana-jetthakānam laūcam datva asikatthāne ettakam vayakaranam gatam asukatthāne amheln ettakam dinnan ti kutasakklinm datvā tam mam jāpayanti vināsenti.

Thus the puga can raise money for climity, for public worship or to raise a monstery. The aldernien who were in charge of these funds had to give accounts of expenditure under different heads. If these people were purchased by bribe and public money misappropriated under false pretences perdition was in store for the offender. The lawgivers were aware of this abuse. "Whatever lone," says

Katyayana, "raised for public purposes is consumed or employed for one's self should be restored by him."

Ganamuddisyr ynt kineit lityarnam hhaksitam bhavet atmartham viniyuktam yn devam taireva tad bhavet (Cf. Vis. V. 167, Yaj. II. 187)

About the aldernien of members of a town corporation (negama) the Bhattiprolu Inscription (No 8) enumerates twenty one eveo giving their names '

They obviously have their counterpart in the grama urddhas of the Arthasastra But the Bhattipiolu Inscription certainly points to a fuller municipal life in the town than in the village. And this is corrol orated with additional

data by Megasthenes account about Pataliputra "Those who have charge of the city are divided into six bodies of five

cach. The first looks after everything relating to industrial arts the second to care of foreigners, the third to registration of births and deaths, the fourth to control of trade, the fifth to sale and auction and the sixth to collection of tithe. Collectively they attend to matters of "general interest, as the keeping of public buildings in proper repair, the regulation of prices, the care of markets, harbours and temples (Str XV 1 51) The picture of course appears to be one of complete official control and not of a self governing hody. But the executive machinery with departmental divisions and standing committees in charge of each and with its collective functions was presumably evolved from pre imperial days and was a general characteristic of big metropolitain cities described in the pieceding chapter

It may also be presumed that whenever the imperial control was withdrawn, the same machinery was continued under democratic direction. The later Smrtis lay down high qualification,

tiz, good lineage, knowledge of the Vedas, self-control, administrative acumen, purity of hody and mind and freedom from avarice for the executive officers of the assembly who are called samuhahitavādinah and hāryacintahah (Vi XVII 9, Yāj II 191). The power of appointing and of punishing them was exercised by the municipal body (Vi XVII, 17-20). When not under the direct authority of a strong king, the autonomous or semindependent municipality developed a police and military force of its own to defend against attacks either from within or from without, ie, from jobbeis and rogues who must be repelled by all (Vr XVII 5f, cf Nar III 4, X 5). Sometimes they became powerful enough to take the offensive, make marauding expeditions and halass kings (Vi. XIV 31f., Arth V 3).

[Archeological evidence affords a glimpse into the other functions of the municipal body Mun cipal functions Nasık, under Scythian role, the terms of a royal endowment or of a private endowment with investment in a guild hank were publicly announced (sravita) in the town-hall (nigamusahba) and then duly registered (mbaddha) (Nasik Cave In 12 v, 15 vin). J The corporations had their seals and sometimes issued coins in their name Marshall discovered a seal-die of terra cotta at Bhita near Allahabad with the legend 'Sahijitiye nigamasa' assigned to the 3rd or 4th century B C on palaeographic grounds at the foundation of a house which he thinks to have been the office of the nigama 1 Four sealings hearing the legend 'nıgama ' or 'nıgamasa ' ın Kusanı characters have also been found there and a fifth with the legend 'nıgamasya'ın northern Gupta characters Sımılar seals have been discovered at Basarh (Vaisali) helonging to the time of Gupta emperors Four coins have been discovered

The Mun cipal market | State and municipal control | Mechanisation of industries | Mechanical devices and power

The long-standing notion that India has all along been Agricultural country? primarily an agricultural country was dispelled many years ago by the scholarly thesis of R. C. Dutt. It is now well-known that India way the home of arts and crafts, that her specialised industries found an appreciative market throughout the known ranges of the globe, that she was rich in raw materials for industrial production and that many of her finished goods would compare favourably with her modern compers an aesthetic

The towns no doubt favoured the concentration and perfection of the industrial arts. But these had an almost equally important rôle to play in rural and in national economy.

Literally every bouse was a centre of some small industry And side by side with the agriculturist innumerable industrial professions cropped up in the countryside to cater

to the needs of the people and add to the total productive wealth of the nation.

Dionysius, the poet of "The Description of the Whole World," supposed to belong to the 3rd century A.D., gives a brief and heautiful glimpse into Indian industries from loogrange perspective. "They (the Indians on the other side of the Indus) are variously occupied—some by mining seek for the matrix of gold, digging the soil with well-curved pickaxes; others ply the loom to weave textures of linen; others saw the tusks of elephants and varnish them to the brightness of silver; and others along the courses of mountain torrents search for precious stones—the green beryl, or the spackling diamond, or the pale green translucent jasper, or the yellow stone or the pure topaz, or the sweet amethyst which with a milder glow imitate the hue of purple,"

India had abundant mineral resources and her people knew full well to exploit the mines. In Mining and metals. the words of Diodorus; she "has also under ground numerous veins of all sorts of metals, for it contains much gold and silver, copper and iron in no small quantity, and even tin and other metals which are employed in making articles of use and ornament, as well as the implements and accoutrements of war "(II. 36). Strabo, although he dismisses as a fable the story told by Timagenes that showers fall of drops of copper which are swept together, cites the more credible statement of Megasthenes "since the same is the ease in Iberia, that rivers earry down gold dust, and that a part of this is paid by way of tribute to the king" (XV. i. 57). Similarly on the testimony of Gorgos, the miner, he believes in the existence of gold and silver mines in mountains but is misled to state that "the Indians being uoaequaioted with mining and the smelting of ores ' do not know their own wealth.

This is distinctly referred to as early as in the Rg-Veda, V. 9. 5; VI. 3 4.

and therefore traffic with greater simplicity" (30) [(In a Jatha verse, a list of minerals includes iron (ayo), copper (loham), tin (tipu), lead (sisam), silver (rajatam) and gold (jathūpun) (cf Dn XXIII 29)) The Arthafastra list of metals gives iron (kalayasa), copper (tamra), ? (vitta), bronze (kamsya), lead (sisa), tin (trapu), meieury (viutia) and brass (arakuta) (The Jataka stories also testify that these mines, mostly under state monopoly, were worked by convict labout) (cf Arth IV 8)

The Arthasastra, in the chapter on Akarakai mantapravai tanam, evinces a great development in M persions the science of mineralogy (sulbidbatin sastra) Mines were discovered and exploited in plains and in mountain slopes (Large varieties of alloys, processes for extracting metals from ores, the chemical test of metallic substances on acid and alkaline matter are all treated in detail) That these were the acquisition of an earlier age from that of the author of the Arthasastra is evident from the simile in the Jataka verse-" like verdigris removed by acid, -ambilena paharitva tambamalam (III 344), ambiladhotam viva tambamalam (V 95)1 Drawing a more elaborate analogy, Buddha explains "When master Kassapa, that ball of non, with its lambent and gaseous concomitants is burning and glowing with heat, then it is lighter, softer, more plastic, but when, without those lambent and gaseous concomitants, it is cool and quenched, it is then heavier, more rigid, less plastic 2 (Dn XXIII 17)

After the knowledge of metals and of their properties

was acquired, the smith's trade was
divided and specialised on the basis of
different metals. In a Villinda list of crafts in a town we

¹ Cf Buddinghosa's note on "khura's patkam re powler prepared will st fike g n to prevent rivers from restry Cv V of 4

have reference to workers in gold, silver, lead, tin, copper, brass and iron separately (suyannakāra, sajjhakāra, sīsakāra, tipukāra, lohakāra, vattakāra, avakāra). By far the commonest and most important from the point of view of village ceonomy were the blacksmiths, the workers in iron and steel. They were generally grouped The Black smith in exclusive settlements of their own.1 and people came from the neighbouring villages to have razors, axes, ploughsbares and goads made) (vasi-pharasuphāla-pācanādi, Jāt. III 281 ff). (A more elahorate list of their handierafts gives razor, axe, spade, augur, hammer, instrument for cutting hamboos, iron weapon, grass-cutter. sword, iron staff, peg and three-pronged iron fork)(vasipharasu-kuddāla -nikhādana - mutt bika-velugumbbacchedanasatthi - tinalāyana - asi-lohadanda - khanuka - ayasimghātaka.

It is difficult from this distance of time to assess their workmanship at its true value. In the Workmanship Jātaka story just referred to (III. 281 ff). we are told about the exploits of a youthful produgy. He "took iron of the best kind and made one delicate, strong needle which pierced dice and floated on water: then he made a sheath for it of the same kind and pierced dice with it." Seven such sheaths were made enclosing one upon another, even the last capable of being mistaken as the needle. The strength of the needle is demonstrated by piercing an anvil with it and letting it float on water. We do not know what allowance is to be made for the Bodhisatta factor. The human element is left in the lurch by the pedagogic conclusion of the story: "How he made them is not to be told, for such work prospers through the greatness of Bodhisatta's knowledge."

V. 45).

There was also the itinerant smith who carries his furnace wherever he is called to go-kammārānam yatha uliā anto ihāyati no bahi, Jat. VI. 189.

There are other evidences of the high excellence of the blacksmith's art which stand on more solid ground For, it must be remembered that he not only supplied tools to the cultivator, the gardener, the carpenter, the wood eutter and the grass-mower, he also armed the military It was on him that the king depended for victory in war. Megastheres notices this twofold function of the smith (Diod II. 41) and the protection given to this class by the Maurya state They received subsidy from the royal exchequer and were exempted from paying taxes Causing injury to their eye or hand (which disabled them to pursue their craft) meant death for the offender. The sedulous cultivation of the art of killing and of its implements led to the unique metallurgical development as reflected in the chapter on the Superintendent of Armouries in the Arthasistra (II 18), and in the great hattle episodes of the Mahabharata

AThe goldsmith from the nature of his trade seems to have settled in the town where he could The goldsmith cater to the demands of fashion and luxury of the richer folk, and he is not found settled in exclusive villages like the blacksmith in the kammaragama) (Jat. V 424 com., Dn II 88, Mil 331; Ram. II. 83 15; Mathura In E I II 14). (His was a highly specialised art) The author of the Arthasastra contemplates a separate superiotendent over the craft, treats gold and silver separately from other metals and deals with various fineries like ornameotal work, setting jewels, thread-making, etc (II. 12 f) (The skilled smith executes au exquisite gold image to the order of a king)(Jat V 282) (He is seeo refioing gold from the bed of river Jamhu in a crucible, working it to a brilliant polish so that, laid on a yellow cloth, it diffuses its sparkling radiance around)(nekkham jambonadam dakkhakammaraputta ukkamukhe sukusalasampahattham pandukambale nikkhittim bhasati ca tapati ca virocati ca, Mn 120 , An I 181) The silversmith, blowing

off the filth from his metal, is also a common figure (Snt. 962; Dhp V. 239) Much of jewellery has survived and is amply represented in the bas-reliefs to show the shape and size of ornaments (cf. Rām I. 16; II. 9; III. 49, 51, 52, 54)

The Arthagastra specifies the fees for metal-workers.

They were required to manufacture gold and silver coins, 1 māsa is the fee for the manufacture of a silver dharana, 1/8 pointen for manufacture of a silver dharana, according to the skill of the worker. Fees shall be 5 p.c. or 1/20 for manufacture of articles from copper, brass, vaihntaha and ārakūta. 1 and 2 hahans are fees for manufacturing an article of a pala in weight of lead and iron respectively (IV I. Munich MS.) 27

The hills and forests of India were rich in animal resources sufficient to draw the attention of Mcgasthenes, and to provide materials for a complete freatise by Achan. In the forests held under its monopoly, the state had a lucrative income from these products (In the primeval forests which were no man's property, the hunter and fowler plied their trade selling flesh for entrog to the townsfolk or the hide, claws, teeth and fat when he happened to bag a hion) (Jat I 387; III 152). According to the Arthasastra, the skin (carma), hour (asthi), bile (pitta), gut (snayu), tooth (danta), horn (srnga), hoof (khura) and tail (puccha) are useful commodities derived

Ol silver This means 1/16 of value, 1 dharana being 16 majas in weight

The Sukraniti sessions the gold-mith 1/30, 1/60 or 1/120, according as the workmanh p is excellent, mediacre or inferior 1/240 in the case of a bracelet (keleka) and 1/40 for mere melting. The grades of the subremuth are $\frac{1}{2} + \frac{1}{2}$ seconding to quality of work and 1/10 in the case of a bracelet. The feets $\frac{1}{2}$ for copper, z no and issued metal, $\frac{1}{2}$, 1, 2, or 8 times an ease of iron (IV vv 693 59). Thus Sukra's law is more equitable giving more weight to workmanship and less to the value of the metal worked upon

196 SOCIAL AND RURAL LEONOMA OF MORTHLEN INDIA

from the lizard, the seraka (?), the leopaid (dwipi), the porpoise (sumsumara), the hon, the tiger, the elephant, the buffalo, the yak (eamaia), the rhimoceros (? sumiiakharliga) and the gayal (gavaya) as well as from other animals, hirds and reptiles (II 17, 29)

The skin disposed of by the hunter went to the tanner and cobbler and fed then industry The Industries wool and the feather, after the necessary processes of carding and cleaning, were used by the skilled weaver for the production of warm clothing But the more important trade flourishing upon animal produce was that of the avery-carver He could carve out any shape out of ivory as the potter out of clay or the goldsmith out of gold (Dn II 88) (The material yielded into diverse forms and shapes as for example hangles and trinkets (valayadini, Jat I 320 f. Il 197), and "a living elephant's tusk was worth a great deal more than a dead one's' (Jat I 320 f. cf Arth II 2) In the Atthasalını these artısans are sketched as "tightly swathed in one garment, their heads covered with another, their limbs besprinkled with ivoly dust, making various forms out of ivory," so that a king riding his elephant in state " heing pleased with their skill, might say, 'how clevel are these masters who can do such things" and even wish he might be one of them (135))

Fishing was probably confined to the rivers and likes and the depths in the sea seem not to have been explored by the northerners to a very appreciable extent (A casual simile in the Jatakas of course refers to the throwing if a net in the sea (samuddamithabake jalam khipantin viya, III 345), but in the Jatakas a river is often indiscriminately spoken of as a samudda (I. 227 ff, IV 167 f, VI 158) In the Santipaiva, going into the depth of the neean is among the taritas (samudram va vidantyanye, 167 33) The treasures (ratana) heneath

the ocean are enumerated as mukta (pearl), mani (crystal), veluriya (heryl), samkha (shell), sila (quartz), parala (coral), rajata (silver), jatarupa (gold), lohitanka (juby) aud masara galla (cat's eye) (An IV 199) Pearl-fishery was a flourishing industry in Ceylon and in the Tamil countries Writing about it, Pliny says that like hees swarms of oysters were led by clever and fitting ones. If they are netted, others are easily cought "They are then put into earthen pots where they are buried deep in salt. By this process the flesh is all eaten away, and the hard concretions, which are the pearls, drop down to the bottom " (IX 55) The tortoise shell which figures in the Penplus (17) as an important export from India may he a southern product and so also the headed pearls of Sita's head tiaia which are claimed to have been raised from the sea (harisamhhavali, Ram V 40 8),

(Perfumery was a highly specialised art (Jat \I 335) The commonest perfume was sandal Perfumery nood was rubbed into a paste, or oil was extracted out of it which was used along with aloe (akalu) as toilet)(II 181, III 160, 512, V 156, 302, VI 144) There were several varieties among which gosirsa, 1ed sandal and that produced in Dardara are enumerated in the Kalpasutra (100, cf Arth II 11) Flower-scents were extracted and used to perfume crude sesamum oil (Mbh VII 279 14 f., 299 14) Many other varieties of aromatics were cultivated and gathered which figure prominently in the Periplus and classical writers among the exports of India to the Roman world Chemical compounds of different scents were also known (sabbasamhāraka, Jat VI 336) and the art embraced the knowledge of enbalming and preserving dead bodies (Ram VII 88 2-4) Despite the attempt to stigmatise his profession in certain quarters as appropriate to mixed castes (Mbh. XIII 23 48)

(the perfumer s (gandhika) art had a good demand among the rich and fashionable people and consequently commanded respectability)(Jat VI 336, Ram II 83 12ff Mathura In , Karle Cave In)

The habits of luxury equally encouraged the textile Text le ndustries industries Megasthenes observes that the main attention of the fashionable was in dress and the medallions and rehef seniptures in Barhut, Sanchi Sainath and Amaiavati amply hear out his observation The Jain's Actrangashtta mentions several varieties of cotton and fur etnff (II 5 1 4 f) (The Withwaggi enumerates among textile goods khomam (linen), lappasilam (cotton), koseyyam (silk), kambalam) (woollen garments), sanam (hemp) and bhangam (bempen cloth) (I 30 A further elaboration is made upon these, 112, sanam, sanasuitam and saniyo, ic, hemp, hempen thread and hempen cloth, I homam and I homasuttam, ie, flax and linen thread kappasikadussam and lappasikasuttam, ie, cotton cloth and cotton thread (Dn XXIII 29) (That spinning and wearing were separate industries is evident from the Milinda)(331) and the Ramayana (II 83 12 ff) lists of crafts and professions (An III 295) The texture of these was sometimes so fine that the down on the gould was coarse in comparison (civarani dhilemi dalhani yattha lukhani alabulomasani Mn 77)

(Sill was of cour c the commonest lunnry Cripets were made of the finest filme cloth (virapotha latthaianam, Jit VI 280) or with soft virigated squirted sing (mudneitfalvilandala, Jat VI) of bluid ets and woollen stuff there were many varieties, cg, died or embroidered blunkets (citran lambalau) (Rum II 70 19) and those spotted with lac die (IV 28 24) In a long list of lunary goods to which the Brahmans are addicted, have been enumerated the gonako (rendered by Rhine Davids as goat's hair coverlets with very long fleece),

cittaka (patchwork counterpanes of many colours), patikā (white blankets), patalika (wonlien coverlets embroidered with flowers), tulika (quilts stuffed with cotton wool), vikatikā (coverlets embroidered with figures of lions, tigers. ete), uddalomi (rugs with fur an both sides), el antalomi (lugs with fur on one side), hatthissam (coverlets embroidered with gems), hosenyam (silk coverlets), luttal am (carpets long enough for sixteen dancers), hatthattharam (elephant housings), assattharam (horse rugs), rathattharam (carriage rugs), annappaicnim, l'adalimiga pavarapaccatthaia nam (panther or antelope skins), sauttaracchadam ubhato lohitakūpadhānam (conches covered with canopies or with cumson cushions at both ends) (Dn I 1 15, cf XVII ii 5. My 7, 10 13) Bhakets were made also of human han (kesakambalam)," of horse's tail (valakambalam)3 and of feather of owl (ulumapakkham) (Dn VIII 14, XXV 8. Mn 12, An I 181, 286) Blankets, fibrous garments and cotton fabrics with thoir specialities and sources of supply figure in the Arthrestra as well known industrial products (II 11) Megasthenes observed that Indians put on robes worked with gold and precious stones, and flowered garments of the finest muslin (Str XV 1 53 56) Among other articles of luxury were "high and large

couches,' e g, the asandı (moveable settces, high and six feet long)' and the pallanko' (divans with animal figures carved an the supports) (Dn I 15, An I 181, My V 10 3, Jat I 108), couches of Nory, wood, gold or silver (Sn III 146), mirrors, eye-

ointments, garlands, rouge, cosmetics, bracelets, necklaces, walking sticks, reed eases for drugs, rapiers, sunshades, embroidered slippers, turbans, diadems, whisks of yak's tail and long-fringed white robes (Dn. I. i. 55; Au. I. 181). "They wear shoes made of white leather, and these are elaborately trimmed, while the soles are variegated....." (Arrian. 16).

Lac was widely cultivated and a flourishing industry thrived upon it. It was used mainly as a dye and for anointing their feet by women (Therag. 459). Apiary or bee-culture was well-known (Arth. II. 15; Rām. V. 61-63). The classical writers also give prominence to a host of edible spices, herhs, medicines, stones, dyes, resinous gums, etc., as peculiar Indian products which had a monopoly of Arahian and Roman markets (cf. Mv. VI. 1 ff.).

was achieved is shown by the splitting off of the art of arrow-making from the smithy. A fletcher (usukāra) straightening or hending his arrow is a very common reference (Dhp. 33, 80; Mbh. XII. 178. 12). He heats an arrow in a pan of coal, wets it with sour rice-gruel and closing one eye, looks with the other while he makes the arrow straight) (usukāro angārakapalle usuņ tāpetvā kaūjikena temetvā ekam akkhim nimīlitvā eken'olokento ujum kāroti, Jāt. VI. 66). (From the Milinda

hows (dhanukāra) and of bow-strings (jiyakāra) apart from any ornamental work thereupon.)

The same was the case with carpentry. While the art or the raddhaki covered all woodcraft in general, the lacchaka (planer) and the bhamzkāra (turner) specialised in modes of woodwork (Mv. I. 56, 396; Dhp. 80).

list of crafts practising in a town it would appear that the art of arrow-making, while being separate from that of the smith (cundā) was separate even from the manufacture of

(The Pali literature throws much light on the craft of the vaddhak: The Jatakas have an illubose building minating passage about a settlement off

Benares) "They would go up the river in a vessel, and enter the forest, where they would shape beams and plans for house-building, and put together the framework of one-storey or two storey houses, numbering all the pieces from the main post onwards, these then they brought down to the river hank, and put them all aboard, then rowing downstream again, they would build houses to order as it was required of them, after which when they received their wage, they went back again for more materials for the building, and in this way they made their hyelbood" (II, 18).

Te nāvāya uparīsotam gantva araūne gehasambhāradarūni kottetvā tatth'eva ekabhūmīka-dvibhūmīkadi-bhede gehe sapietva thambhato patthīya sabhadārūsu saūnām katvā nadītiram netva nāvam aropetvā anusotena nagaram agantva ye yadīsām gehāni akamkhanti tesam tadīsāni katva kahāpane gahetva puna tatth'eva gantva gehasambhare āhaianti. Evam tesam jīvikam kappentānam

(The passage gives valuable clues to the condition of the industry Wood was plenty and it was used on a large scale for house-building! The carpenters who are in this

¹ There is little doubt that during the period of our study timber was largely used for constructions in the Gangetie prosunces Gat III 167, 317 IV 153 159 MV III 8) It was neel to bud the palaxes and fourtheatons of Palaptorta, although the Atthésatia disapproves of such use as fire finds a happy abode in wood Conditions, may have been different faither west for the Milindapanho composed by a western writer, says that in the eastern districts (parathbuness) houses were built of combias tible maternal lie that chi so I wood and were dangerous in case of fire (pp 48, 47 221), and eating thereby that the nestern countrie used offer and ton combustible maternal. In this respect the distinction between tows and villages should be noted. The village bots were boilt chiefly with waithe (kafil a), withes (vall), grass (tima) and clay (mattha) Mo 28, Mil 43, Mb 1 M1 261 7) but the application of brich, stone and comontal and with wood is testified to (Cv V 11 6, 14 8, 16 2, 17 2, VI 3 37, 10, 17 1) Arran draws the distinct on that crise on orver banks or sea-coasts "being meant to last for a time." mainly consisted of woodworks, while close or "companding coment to last for a time."

202 SOCIAL AND RURAI ECONOMY OF NORTHERN INDIA

case a firm of huilding contractors resided in proximity to the sources of their raw materials 1 e, to forests. At the same time they must be within easy reach of the town where they have to receive and execute orders and the river afforded the most convenient facility for transport. Accordingly the settlement was made on a liver bink, midway between a town and a forest. They brought wood from the forest worked the pieces at home, and carrying them down stream fitted them in the place required.

Besides houses the curpenters took contracts for hedstead (mancam) chair (pitham) etc i e furnitures in general (Jat IV 159)) A Brahmanı carpenter H a craft graned his highhood by bringing wood from the forest and making carts (IV 207) (Chanot making and hip building came within the purview of his trade and called for considerable skill in wood crift. He is seen plying his trade with hatchet adze, chisel, and mallet (visipharasumkhadanamuggaic) and the measuring line (kalasutta) (Jat II 405 IV) 344) which he draws out at length or winds up short (On XXII 2) or which he puts round a log of wood with black dust to guide his saw (tacchako kalasuttam anulometva rukkham tacchati, Mil 413) He bends a log of wood (daruu namayanti tacchaki, Dhp 145) and discarding soft parts of the wood takes the hard parts (pheggum apaharitva saram adiyati, Mil, 413) as obviously in the case of ebony of which the outside is soft and inside hard

(The carpenter was not the only agency engaged in house huilding. The huilding of a kings palace was the venue of as many as eighteen manual aits (J. t. VI 427). Among them the foremost place was that of the architect, who is skilled in divining

stuations were built of brick and mud. The rem n scence of the former practice survives now in Burma which is at ll rich in forests and timber

good sites (vatthuvijjācariyn, II 297, IV 324) and who is sometimes "enducd with great intelligence and well-versed in the knowledge of laying finundations) a suta by caste, well-acquainted with the Puranas,"—

(The stone-cutter was his accomplice (pāsānakottaka), an expert in quarrying and shaping stone (pāsāne uppātetvā kotteti) and capable of hollowing a cavity in a crystal (Jat I 478 f)). Innumerable archeological finds testify to the growth of his craft. He made flights of steps leading up into a house and laid foundations for the woodwork if which the upper part was huilt. He carved pillars and bas rehefs. He faced a tank with stone-hining and equipped it with steps and balantade (Ci. V 17.2, Rudradāman s Junagadh Rock In.). And he did finer work such as making a crystal howl of a stone coffer, excellent specimens of which have been discovered in the Sakiya tope, and chiseling exquisite works of sculpture on topes and temples.

To the work of the architect, carpenter and stone-cutter, the painter (cittakara) gave the finishing touch. The clay

and woodwork of houses was covered with fine cunam plaster on which the painter printed frescoes) (Cv VI 17. 1, Sum 42, 84, Vin II. 151, IV. 47, 61, 298, Mil 331) But the painter's like the sculptor's art was not the handmaid in architecture because of the facts that the chisel and the brush hid a free berth in frescoes and mural decorations and that accordingly they are treated in the Silpisästras in subsidiary sections of the Sthapatyaveda Painting flourished as a finished and independent art. A passing reference in the Mirchakathka, Act I, gives a glimp's of the painter at wolk. "I who used

to sit in the inner courtyard and was fed on highly favoured with a hundred pans around me, like a sweets painter surrounded with paint-pans, from each of which l touched a bit and pushed back working in his mind with the outer operations, the Atthasalini speaks in greater detail, "In painting, the printer's masterpiece (carana) 1 is more artistic than the rest of the pictures An artistic design occurs to the painter of masterpieces—that such and such pictures should be drawn in such and such a way Through this artistic design there arise operations of the mind (or artistic operation) accomplishing such things as sketching the outline, putting on the paint, touching up and embellishing Theu in the picture known as the masterpiece is effected a certain central artistic figure Then the remaining portion of the picture is completed by the work of planning in mind as, ' above this figure let this be, underneath, this; on both sides, this.' Thus all classes of arts in this world specific or generic are achieved by the mind. And owing to its enpacity thus to produce a variety or diversity of effects in action, the unind, which achieves all these arts is itself artistic like the arts themselves. Nay, it is even more artistic than the art itself, because the latter cannot execute every design perfectly For that reason the Blessed One has said 'Bhikkhus, have you seen a masterpiece of painting?' 'Yea Lord' 'Bhikkhus, that masterpiece of art is designed by the mind Indeed, Bhikkbus, the mind is even more artistic than that masterpiece."2

(The dyer and washerman (rajaka) was probably the same person but different from the dye-manu-The facturer) (rangakāra) (Mil 331, Dn. 11. 14; or dyer Mn 56, Ram II. 83 15, Manu, IV. 216).

itinerant artist

He knew how to remove the dirt of a cloth without destroy-1 Vicesapacittati,—com En III 151 A show piece selected for exhibition by an

ing the dyc (Mhh. XIII. 91. 2) He gave the dyc of blue, yel low, ied or saffron (mañjettha) to a piece of cloth after cleansing it properly (Mn 7, An III. 230) Regarding his terms of business, the Arthasastra lays down that he shall he fined 12 panas for selling, mortgaging and letting out for hire others' clothes. Clothes merely to be cleaned are to he returned within 1 to 4 nights, clothes which are to be given thin colouring (tanuragam) 5 nights; those which are to be made blue 6 nights, those which are to be made as red as flower, lac or saffron or those which require much skill and earc 7 nights (puspa-lāksā-mañjisthā-raktam guinparikaima-yatnopacāryam iatyam vāsah sapta-ratrikam) Otherwise charges will be forfeited (IV 1 Munich MS)

Lamong other specialised crafts were those of the florist or garland-maker/(mālākāna, Dn. II 11, Other in lustries Mn, 50, Jat. 111, 405, Mil 331), of the (manufacture) of sugar and sugar-candy) (Str. XV 1. 37), of the oil-presser (tailika, tilapisaka, Manu 1V 84 f; Mbh XII 174 25, XIII 90, Nasık Cave In 15. vii), of the salt-maker (lonakāra, Mn. 56, 128, Jat. III 489), of the curry-maker and provision-vendor (odanika, III, 49; ālankā sūda, Mil 331, bhojanadatr, Arth IV 8) (making a luscious display of his stuff) (nānāggarasanam dihbabhojanaoam bliājanam puretvā odanikāpanam pasārctva, Jāt I 397), and of the tailor (tunnavaya, Jat VI 366, Mil 331) who used a thimble or finger-protector (patiggaho) when sewing)(Cv V. 11. 5) (Among the poorer crafts were those of the woodcutter (katthaharakā, Mil 331, Str. XV. 1 50) and the grasscutter (tınahāraka, Mıl. p. 331) who works with sickle (asitam), ties the huudles with a rope (tinabandbanarajjum) to a pole (kājan) and sells them in the city)(Jāt, III 129) Thera Kappatakura who in his young days supported himself going about clad in rags, pao in hand, seeklog for rice grains (kura), when grown up maintained

himself by selling grass which he reaped in the forest (Paramatthadipani oo Pss 199 ff)

Strabo speaks disparagingly not only about the mining activities of the Indians, but also about Adaptability their industrial propensities to general craftsmen "They do not pursue accurate koowledge

in any line, except that of medicioe, in the case of some arts, it is even accounted vicious to carry their study far, the art of war, for instance" Presumably his authority derived the information from the priestly denunciation of all manual pursuits For elsewhere he lumself quotes Nearchus speaking of the remarkable adaptability of native They saw sponges used by the Macedonians for the first time and immediately manufactured imitations of them with fine thread and wool dying them with the same colour They quickly picked up other Greek articles such as serapers and oil flashs used by athletes. For writing letters they used species of fine closely woven tissue A study of the plastic arts amply bear out that the Indians had their own designs and ideals, but these did not stand in their way of quickly mastering foreigo ideas that commended

Among urban crafts the Milinda and the Ramayana lists include jewellers (manikārā), rope The city bazar makers (rajjukara), comb-makers (koccha kara); arms-makers (sastropapymah), makers of fancy-fans from percock ferthers (māyurakāh), those hving on krakacas (krakacıkah), borers of pearls, etc (vedhakāh), rocal ah (?)) and nector-makers (sudhākarah) (cf Ram III. 90). Browery and distillery, pottery, wicker-work and leather-work complete the general picture of industrial economy The towo bazar presenting an imposing array of flower shop (pupph panam), perfumery (gandhapanam), fruit

¹ These industrice are treated in more detail in Bk. V. Ch. III and Bk. VI. Ch IX

shop (philapanam), pharmacy of antidotes (agadāpanam), medical stores (osadhāpanam), stores of ambrosia (amatāpanam), jewellery (ratanāpanam) and stores of all other sundry merebridise (sabbapanam) (Mil 332) was the general sight in all cities and not in the Indus Valley alinie. In the Maurya state it was necessary to employ civil officers to superintend the occupations of artisans like wood-entters, earpenters, blacksmiths and miners. Of the six

State and Municipal hodics of the municipal hoard of Patali-

putra, the very first "look after everything relating to the industrial arts" (Str. XV 1 50) Competition, unfain dealings, deceifful practices against customers, smuggling and cornering, evasion of state revenues and municipal titles, all these evils of a thriving industrial life demanded interference of the state as far as it could extend its hand. The Arthasastra, the great exponent of this school, makes a clean sweep of laissez-faire practices and seeks to inaugurate a rigorous state control to which even Friedrich List offers no parallel

How for Industry was mechanised as a difficult problem for study There is little evidence of the M chanisatio : 2 use of power like those of air, water or electricity, if the stories of flying vehicles and miraculous nms in the Epics are dismissed as legendary. It cannot be ascertained what sort of engine (vantra) was fitted in the boat which Vidura huilt to help the Pandavas escape from the lac house (Mbh 1. 143 5) (Nor can the mythical element be sifted out from the feats of a Bodhisatta mechame who huilds a house with "eighty great doors and sixtyfour small doors which all by the pressure of one peg closed, and by the pressure of one peg npened", and with "some hundreds of lamp-cells aisn fitted with machinery, so that when one was opened all opened—and when one was shut all were shut) (Jat VI 432) But there is little doubt about a considerable progress in mechanical devices, applied 208

to various industries, as for example, evinced in the chapter on Armoury Superintendent in the Arthasastra (II—18). The commeotaries on the art of mechanical engineering (mnhā-yantrapravartana) in Mann (XI—64) are informative in this respect. They go severally as "constructing dams across rivers to order to stop the water." (Medh., Gov. and Kull.), "mnking ninchines for killing great animals such as boars." (Nar.) or "mnking great machines such as sugar-mills." (Nandana)

From these explanatory notes and copious other evidences it appears that mechanical contrivauces were called for by the great irrigation projects

undertaken to combat flood and drought, by armaments and techniques of warfare and by machines like the sugareane-presser) (Jät. I. 389, II 240), the oil-presser (Mih XII 174 25; Maou IV 84 f), the water-pump or hydraulic engine (odryantra, Nasik Cave In 15 vii) and the loom with its sluttle and wheel and spokes (Cv. V. 28 2; Mihi. I 3 111) The devices of a double water-strainer and fitter (Com on 'dandaparissāvanam' and 'ottharakam', Cv. V. 13 3) and of a door with poles turning about on a socket (V. 14. 3, VI 3.7) were common things. The fictions of Nala bridging the sea between the Cape and Ceylon and of Maya raising a picturesque town on the site of a forest cannot be altogether divested of reality. The great monolities of the Maurya cpoch estimated at about 50 tons each and their transport and crection at such

This craft and the super at all nee of manes and factories are brighted low. It seems that meel assistant and leasy industria were of precated by the orthodox and least thousand Ascata is not to necest less that from an oil presser and an oil presser as as a load as too slaughter hours alliann IV, 81(1). 212 SOCIAL AND LUCAL ECOSOMS OF NORTHERN INDIA

18 f), and the is am ng the chief articles of merchandise coming to the plains along the trade routes from the Hima lavas (Arth VII 12) 1

As for elephants, the Arthasastra says that those of Kahnga, Anga, Karusa" and Prācya are The certa t. best, of Dasarna and western countries of middle quality of Sura tra' and Pancajana of low quality (I 2) In the Kuru war men of Anga are found The settlements near about these forests must have Ivory

specialised in elephantry (Mbh VIII 22 18) and the battle episodes have many references to the effect that Pragivetisa of Bengal (or Assam?) was rich in elephant (VI 100 13, VII 26) of a quality unequalled in the Kuru and Pandaya armies So, as the be a stallion came from the west, the best elephant was supplied from the east, from the fore is of Orissa, Bhagalpur and Bengal while those of the great Dandaka forest, i c , in the south east of the Vindhyas, of further west and of Gujarat were comparatively inferior supplied wory and specialised in wors norks According to the Pemplus "the region of Do arena yields the ivery known as Dosarenie" (62) It may not be wild to conjecture the origin of the name Dantapura, the capital of Kalinga to the same flourishing industry. Ivory workers are seen mirround a

prosperous trade in Benares (Jāt. I. 320 f.; II. 197), in Ayodhyā (Rām, II. 83. 12 ff.), in Vedisā (Bhilsa—Sauchi Iu.) and in the Tamil countries (Pcr. 56) obviously with materials imported from the above-mentioned sources.

The sources for horses listed above appear also as sources of animal skins. The varieties given in the Arthasastra (II. 11) are mostly assigned by the commentator to the Himalayan borders and skins are among the wares purveying in the plains from the Himalayan noute (VII. 12). Arjuna obtained skins during his promenade in north Harivarşa (Mhh. II. 28. 16). The northern Kirātas brought this as tribute to the Kurn king among other Himalayan products (II. 52. 10 f.). Deerskins and skins of Ranku deer were presented to Yudinşthira by the king of Kamboja (II. 49. 19) and by the Bālhīkas (II. 51. 26), i.e., from the Punjah.

About the distribution of food-crops information is meagre. In the Periplus, Abiria (Ābbīra in Gujarat) is a fertile country yielding wheat and rice, sesame oil and clarified butter (41). This is confirmed by the further reference to these as the major articles of export from Barygaza, the scaport nearest to the Ābbīras (14, 31, 32). But there is abundant evidence that wheat and rice and many other cereals were grown over almost any part of the country.

References to sugarcane come mostly from the Madhyadesa through which flows the river Ikaumati or Oxymagis, i.e., the United Provinces or the Ganges doab which, according to the report of 1931 produced 51.7 p.c. of the total cane crop of India.

¹ This craft is now practically confined to Myssie Travancore, Delhi and Murshidabid follow in order.

² See BL. 1. Ch VIII

214

In the classical works, India has been noted as the chief producer of aromatic or medicinal herhs, roots and resinous gums. Promigums nent among this group are nard which "holds the first place among unguents" (Pliny, XII. 26); costus, an aromatic 1004; myrrh, another medicinal and aromatic gum; cardamum, a medicinal herb; spikenard, a fragrant herb made into oil or ointment; macir, the red bark of a large root used for medicine (Pliny, XII. 16); pepper, ginger and malabathrnni used as condiments.

According to Ptolemy, the best malabathrum or eassia leaf is produced in Kirrhadia (2, 16), a Malabathenen town near the eastern coast of Bengal.1 It was brought down to the port of Tamralipti for export (Perr. 68). An interesting study is given how the Besatae, a Tibeto-Burman tribe of the Himalayas, transacted in silent trade in their malabathrum with the people of This (China) (65). It was grown also in the interior of the Tamil countries reaching the ports of Tyndis, Muziris and Nelcynda for export outside (56).

Spikenard is generally discovered in the same regions, i.e., in the north-west and the north-east Spikenard as well as in Malabar (56).2 In order of its source its varieties are termed Caspapyrene (i.e., of Kasyapapura), Paropanisene (of Paropanisadaı or the Hindukush) and Kaholitic (of Kabul) (48). According to Straho, the land of Gedrosia (southern Beluchistan) produced aromatic plants, particularly spikenard and myrrh which Alexander's army used for tent roofs and heds (XV. ii. 3). On the other hand the tamous Gangetic spikenard

¹ Lassen places it between Chittagong and the mouth of the Arakan ziver, -Ind Ant, III, pp 235-37 Malabathrum (teppat) is now obtained in Sylict, Assam,

Malabar is now the chief source of eddile apioca

³ Stein identifies this with Kashmir, Cunningbam with Multan.

came from the Himalayas to the ports of Tamralipti and of the far south (56, 63).

Costus, lycium, nard and bdellium were exported from
the port of Barbarieum at the mouth of
the Indus (39). This, Sind or regions
farther north, may be the "upper country"
from where costus and bdellium were earried through Ozene
to Barygaza (48). Nard grew abundantly in the country
of Gedrosia (Arr. Anab. VI. 22).

The distribution of medicinal and aromatic plants cannot be properly studied from the classical authors alone who wrote with knowledge of the scaports serving as outlets of these wares and with partial ignorance of the interior. The indigenous hierature which are more reliable on this point scarcely go into details and when they do, it is difficult to identify Indian names with foreign There are notices on seents in general terms. The Jaina Kalpasutra refers to seents of Turushka or Turkestan (100). In the Kurn war the fighters from Andhra are said to be used to rub powdered seents on their body (Mbh. VIII, 12, 16). About sandal there is more detailed

(A101. V11. 12. 10). About sandat there is more detailed information. The Arthasistra observes several varieties all sends of which, according to the commentary, are specialities of Kāmarūpa or Assam barring only a few, viz., the Asokagrāmika which belongs to Ceylon, the Daryasabheya which is of a city and subjacent hill in Western India producing the lotus-seented (padmagandhi) species and the Kāleyaka which is the product of Svarnabhūmi' (II. 11). Philastiatos of Lemnos, biographer of Appollonius of Tyana (cir. 172 A.D.), writes that on the banks of the Hyphasis (Beas) "grew the trees from which unguent was procured with which hide and bridegroom were anointed, that Venus might be propitious to their nuptials." Another primary source was the

The radiacendama and Friendama are completely different agrees and are now grown in many places. It is not improbable that everal accreted words went under the general name of condama the meaning of which was narrowed down culminating in course of time in the

For the discussion whether Santalum Album was an indigenous plant or an erotic one naturalised in Ind a from the Timor Islands see C E C I ischer Where I d the Sandalwood Tree Evolve? Jour Bom Nat His See Vol N.L No 8

Of plants made into dyes there were many. Those like lac and kusumbha flower were common articles over India. So probably was indigo (Pliny, XXXIII. 4), which was exported outside from Barbargenm (Pen. 39).

Varieties of spirituous liquor are mentioned, e.g., the soma juice, the vāruni, etc. But the best perhaps was the grape wine from the vines of Kapisā (Afgbanistan) (Pānini, IV. 2. 99; Arth. II. 25).

Among metals, gold is the most common occurrence.

Oold Herodotus writes, "There is abundance of gold there, partly dug, partly brought down by the rivers, and partly seized by the manner I have described" (III. 106). The first is the gold obtained from mines. The second is alluvial gold or gold dust carried down by certain rivers presumably from their bed or from their rocky source. The third category, the ant-gold celebrated by all classical writers from Herodotus to Pliny and noticed in the Mahābhārata was in fact nothing but mine gold. About this Strabo gives the following account:

"Among the Dardai, a great tribe of Indians, who inbabit the mountains on the castern borders, there is an elevated plateau about 3,000 stadia in circuit. Beneath the surface there are mines of gold, and here accordingly are found the ants which dig for that metal. They are not inferior in size to wild foxes. They run with amazing speed, and live by the produce of the chase. The time when they dig is winter. They throw up heaps of earth as moles do at the mouth of the mines. The gold dust has to be subjected to a little boiling. The people of the neighbourhood, coming secretly

²⁸⁻¹³⁶⁵B

218 FOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

with beasts of burden carry this off. If they come openly the ants would attack them and pursue them if they fiel, and would destroy both them and their cattle. So, to effect the robbery without being observed, they lay down in several different places pieces of the flesh of wild beasts, and when the ants are by this devise dispersed, they carry off the gold dust. This they sell to any trader they meet with while it is still in the state of ore, for the art of fusing metals is unknown to them " (XV. 1. 44). Arrian quotes Nearchos having seen many skins of these

animals in the Macedonian Camp (15; cf. Pliny, VI, XI 31). These mythic ants, equipped with horns, "not inferior in size to wild foxes," gifted with "amazing speed " and living upon chase, capable of destroying men and their cattle have not been satisfactorily identified. The most plausible theory advanced so far is that the whole is a confused and mythic version of the mining operation of the Tibetans who dug in winter, whose ferocious blackand-tan coloured mastiffs guarded dwellings and mines as even now and whose pickaxes were grafted by hearsay as horns on the animals.1 Whatever the identity of these ants it cannot be doubted that there were gold mines in Dardistan or the Tibetan highlands or Tibrian and Ilims farther west in the Himalayan tracts

taised from underneath the earth by ants (pipilkam nāma uddhrtam yat pipilkaih) The Kirātas of the north-western Himalayas brought along with other articles of tribute gold of great splendom procured from the mountains (Mbh. II. 52 10 f) Because of the reputation of this gold along the upper courses of the Indus among the westerners, the Indus has been supposed to be one of the four rivers of Paradise in the Book of Genesis, viz., the Pishon, "which compasseth the whole land of Havilah where there is gold, and the gold of that land is good."

There were other sources of the metal. The author of the Periplus heard that there were gold Other a wrees mines near Tamralipti of Tamluk and that there was a gold com called caltis (63). Schoff suggests that this might have been the gold of the Chotanagpur plateau, 75-150 miles west to the mouth of the Ganges.2 Rivers like the Son (from svarna or suvarna) known as Erannoboas or Hiranyavahā, a carried alluvial gold in considerable quantities The so-called Miccoba fribes of Bengal brought gold as tribute to Yudhisthira (Mbb. II. 30 27). Further east was the island (or land) of Suvarnabhumi and Suvarnadwipa identified with Burma or preferably with Sumatra, ' owing its name to its gold mines (suvarna-rūpakadwipam suvernakaramandıtam, Rām. IV, 40, 30).8 Pliny states that extensive gold mines were operated on the

¹ Havilah ia identified with Manasa sarovara

³ The Son is referred to an Hirshyavaha in Bana's Harsacsritam

⁴ The alternative Surarnadwips is a strong support for Sumatra (c) Larabhumi and Yavadwips for Jarab which I as always been noted for its abundance of gold In reputse partiance the name however went for the East Indian islands including Burens and Malay See R C Majumdar Suvarnadwing

⁵ Pluy is more acceptic. Beyond the mouth of the Indus are Ciryss and Argyre (identified by Info with Burms and Arakan) zieb, as I believe in metals for I cannot readly believe, what is asserted by some writers that their soil is imprepared with cold and silver. (VI)

other side of Mount Capitalia (Abu) (VI).1 The heavy tubute paid in 360 talents of gold dust annually by the Indian satrapy of the Persian Empire, i.e., the country west of the Indus (Herodotus, III. 97) may have been obtained from the northern mountains or from some local centre. But gold was far more plentiful in the south than in the north (Aith VII, 12) Pluny mentions gold on the Malabar coast obviously coming from the mines of Mysore 2 And "from Megasthenes we learn that Tarrobane is more productive of gold than India itself " (V1, 22).

To some of these sources silver is attributed along with gold As "gold is very alumdant among the Durdae' so is "silver among the Setae " (Sata or Sataka near the Daradas) (Phny, VI). In Pluy's work silver mine is spotted along with gold near Abu According to Ptolemy Ceylon had mines of gold, silver and other metals (1, 1) The Bengal tribes brought silver as well as gold to the Pandavas. In Greek Arakan went as the silver country ' Sugriva's search party in the east came across the land of silver mines (bluminea rajatakaram, Ram IV. 10. 23)s and farther east the island of Rūpakadwīpa, thus strongly refuting the scepticism of Pliny whether there were gold or silver mines in far eastern

On this authority, Cunningham places Pluny's Oraturoe south of this region. on the Gulf of Cambay and identifies it with Sochir or Ophir of the Bible from where the Tyrish navy carried away gold and Precious stones in the days of Solomon For other identifications of Sophir or Ophir, see supra, pp. 175 !

The quartz reefs of Kelar are now the source of 98 p c of India's total gold supply

³ The only silver mines now knewn in India

Probably a transliteration of an ancient Burmese name for Arakan "There are no silver mines in Arakan and considering the geological structure of the country, it is almost certain there never were any Royal Geological Society of Ireland, Mar 19 1883 V Ball I residential Address to the

⁵ The northern Shan States of Upper Borms now apply much of India's silver requirement

On the whole silver seems to have been a much rarer metal than gold. In Indian and foreign literature, particularly in Pali works, reference to it is far less commou than to the latter. The sources of other metals of lesser value are referred to even less frequently for obvious reasons. They were not worth bringing as precious tributes to propitiate conquering monarchs nor would they interest foreigners concerned with trade transactions or whose primary source of knowledge was trade relation. In using our authorities these underlying motives which detract from their completeness should always be borne in mind.

The Periplus notices copper among the exports from

Copper Barygaza (36). The source is not known.

The metal is not extensively worked at present. But formerly it was smelted in large quantities in South Iudia, Rajputana and at various parts of the outer Himalayas where a Killas-like rock persists along the whole lange and is known to be copper-bearing in Kulu, Garhwal, Nepal, Sikkim and Bhutan. Schoff supposes that this might also be European copper of the Parthan Empire re-shipped to the West.

There were rocks yielding salt. "There are mountains also formed of native salt as, for instance Ormenus in India where it is cut out like blocks from a quarry and is continually reproduced, whence a greater revenue acrues to the sovereign of the country than they derive from gold and pearls" (Pluny, XXXI. 7). "In the territory of the Soperthes there is a mountain

Mrs Rbys Davids · J. R A. 8 , 1901

Watt Commercial Products of India, p. 401. Remains of old excavation and cabusted mines are found in several places near about Darpeling and Jainti, in Bargunda, Manbhum and the Sauthal Parganas, in Singbhum where the deposits are said to have been exploited by the Seraha or lay Jains about or before the Christian ers, in Tambhan of the Indire state, in Harpat Nag of Kashmir, in Nellore of Madras, in the Narsul district of Partials and in Rarpatans, Sikkim, etc

hvelihood to the Pāndya chief ²² (Nagpur Stone In. of the Mālava rulers, 1104-5 A D.).\frac{1}{12} "The southern ocean full of rolling waves, the shores of which were shining with the multitude of rays of numerous pearls dropped from shells struck and broken by the trunks of excited elephants resembling whales. ... "Kendur Pl. of Kirtivarman II, Saka Sam 672).\frac{2}{2} All the varieties of pearl mentioned in the Arthasāstia are specialities of Pāndya and Kerala countries and of Ceylon (II 11; VII. 12) In the Periplus, Ceylon on the one shore (61) and Colchi (Kolkai) of the Pandya kingdom and Argara (Urayūr) of the Chola figure as centres of pearl-fishing \(^0\) Ptolemy mentions pearl fishery in the Kolkhie Gulf (1. 10), i.e., in the Gulf of Manar in south Tunnevelly. Pliny quotes Megasthenes to the effect that Taprobane produced pearls

In the north of greater size than India (VI. 22). The north also gave pearls though of inferior quality and smaller size. The northern centre was the Bengal coast from where the milectha tribes paid to Bhima tributes of gens, pearls (manmauktika) and valuable corals (vidrumaaca mahadhanun, Mbh. II. 30. 27). That pearls were fished near about the poit of Tāmralipti and gathered there for export is also affirmed in the Periplus (63). Pliny ascribes the trade also to Perimula (VI. 54) placed in the western coast somewhere near Bombay or in Simylla.

Apart from pearls, sea-fishing was the main occupation

sea fishing of the Ccylonese. "All their energy is
devoted to catching fish and the monsters
of the deep; for the sea encircling the island is reported to

¹ E I II 13 2 F I IX 28

³ In the south pearl fishing seems to have been a state monopoly. The Periplus says that Colchi was worked by condemned criminals and regaring Argari, "at this the authors where it is not brought the pearls gathered on the coast thereabouts. The Nagpur Inscription is also a pointer. See suppa. In 1.

breed an incredible number of fish....." (A dian, 16, 2, 22). Ceylon and the Tamil countries made use of tortoise-shell (Peri. 61, 56) as well as other shells (samklm, Arth. VII. 2) which they supplied to the north and abroad to the West.

In textile industry, the north was leading against the south (Arth. VII. 12). The choicest stuff Textile fabric : were of Benares and Bengal. The fine Bennres muslin of Kāsi (kāsikasucivattha, kāsikāni vatthāoi) is a common reference (Jāt IV. 352, V. 377, VI. 47, 144: Mil. 1). A familiar simile is the Benares muslin of delicate finish on both sides, blue for vellow, or red or white) in colour, blue (or vellow, etc.) in appearance, and reflecting blue (or vellow, etc.) (vattham Baranasevvakam ubhatobhagayimattham nilam nilayannam nilapidassanam nīlanibhāsam, Dn. XIV, iii. 29; XXIII, iii. 1; Mn. 77, An. V. 61 f.). It is pleasant to handle (sukbasamphassam), of great worth (mahaggham), of good colour (vannayantam) and a treasure to be laid up in a scenfed easket (An. I. 248). Kāsi is in the list of places which produce the best quality of cotton fabrics (Arth. II: 11. Sn. V. 45). According to the commentator of the Mahaparinibbaoa Sutta, the texture was so fine that it absorbed no oil and hence was used to cover the body of the deceased Buddha. There were extensive eotton fields in neighbourhood from which the yarn was spun (Jat. III. 286). The silk-fabric of Benares still carries this reputation.

The Beogal spinners and weavers produced muslins of

or Bengal
the finest sort called Gangetie which were
brought down to Tāmralipti for export
(Peri. 63), the traditious of which were maintained by the
famous muslins of Daeca, Santipur and Farashdanga down

Northern traders voyaging from Barygaza brought tortoise shell also from Socoirs.

to the advent of British traders. In the Arthasastra list, Vanga (Eastern Bengal) was the source of cotton fabrics and blankets. Pundra (Northern Bengal) and Suvarnakudya 1 supplied blankets and fibrous garments (patromāh); the latter were obtained also in Magadha (II. 11). Among the presents received by Bhīma from the mlecchas on the coast of Bengal were fine eloths and blankets (cāruvastiāni, kamhalum, Mbh. II. 30. 27) Sericulture was known somewhere near about, for the eastern party sent from Kiskindhya came across the land of worms yielding silk thread

(hlıūmıñea kosakārānām, Rām, IV, 40, 23) 2 The north was another source, chiefly of woollen clothes.3 As a source of blankets, the Arthasastra The north Wool mentions Nepal (II 11; Manu, III. 234 f) and the Himalayan regions in general (VII, 12). The king of Kamboja sent to Yudhisthira as tribute blankets of finest texture along with deer skins (Mbh. II. 49. 19) melading those of sheep's wool, fur of mice and other animals living in holes and of the hair of eats all inlaid with threads of gold -

² Is at Assam? Attempts have been made to identify this with China

The Punjab, Rashmir and Tibeto Humalayan ranges still carry it e tradition

This is n t China proper but Tibeto-Mongolo d races, or people raguely acknowledging Chinese sureraints in the north west

In north Harivarşa Arjum obtained finest clothes and silks (28, 16). The cloth produced in the Sivi country, of which the choicest suit of king Pajjota of Avanti was made (Mv. VIII. 29), was a known luxnry favoured in the palace.

The Arthasastra list is completed with Madhura (of the south),3 Aparanta (Konkana),8 Kalinga, Other sone es Vatsa (city of Kauśambi)' and Mahiśa (Mahismati) for the best stuff of cotton fabrics. Of these Aparanta and Mahismati are corroborated in the Periplus which deals with the same countries while speaking of Barygaza, Ozene and Abiria. From Barygaza were shipped westward, mallow cloth, yarn, silk cloth and cotton cloth, the broad type called monache and that called sagmatogene 5 (6, 14, 31, 32, 49). Ujjaini was one of the centres of production of these textiles transported to Barygaza (48). In Abiria, a very fertile country, cotton was extensively cultivated and cloth made therefrom of coarser sort (41). But a sheep-rearing, pastoral people as they were (41), the Abhīras produced blankets of better stuff of which they brought various kinds as present to king Yudhisthira. Cotton cloth and silk yarn were exported also from Barbarieum (39), probably the produce brought down from the north.

¹ From the testimony of Fa ben and Hisen Tesng who makes the [Su ho-te) the scene of the classic story of king Usinars giving his flesh to save his fagitive pigeon, it would appear to be in Oundbar or Swat valley (Beal's Records, p. 200). But Irom the Subpura in Shorket Inscription Vogel places it in Shorket in Jhang district below the junction of the Jishum and the Chemin It may be the Shore of Strabe (Dee Doud, Solie Custus) and Swapurs of Panini said to belong to the northern country. Cunningham places it in Lower Beas in Juliandbar district. A branch of the Sibes migrated to Mewar where they had their capital Jetuttars (Vessantara Jatt.; Jattarany, Albermi: India, I.p. 2021.)

² Streyystam dunayugam Boddhagi osa gives two explanations of which the same, more plausible, is "a cloth woven from yarn which skillul women of the Sixi country pin."

³ Commentary.

⁴ Minaksı ?

š ?

Madhurā of the Arthaśāstra is also confirmed. The silk cloth of the Tamil poits of Nylcynda, Tyndis and Muzins were roland produce (56). Muslin, mallow cloth and much ordinary eloth were earried from Tagara to Barygaza (51) The Cholas and the Pandyas brought to the Pandavas fine cloth inlaid with gold (Mbh II. 52. 33 ff.).

The countries and their specialised commodities so far as they may be ascertained from the above may be arranged thus in tabular order -

The list is no doubt incomplete, defective and lacking valid confirmation in many cases. There were innumerable thriving industries outside this small range which cannot be localised for lack of materials The compilation, tentatively made from vague and scrappy literary notices may not be correct in every detail But the facts of localisation and specialisation stand out; and for certain industries at least, e g, the muslin of Bengal, the pearls of Pandya and Ceylon, the sandal of Mysore and Assam, the gold of Tibet, Garbwal, Malabar and Covion and the fleet-footed horse of Suid and the Punjab, evidences are almost unimpeachable logues of the Arthasastra and the Sabhapaiva alone, from which many items have been omitted in this chapter, give the modern economist ample food for thought over the magnitude of lost arts and industries exhausted inines and forests, exterminated flora and fauna and defertilised agricultural land

CHAPTER V

ORGANISATION OF INDUSTRIES

Guild organisation Grent and pag t Origin of combination Stages Vedic,

Organisational structure (a) Localisation of in lustries Theory, practice—in town in village (b) Leadership the panul has the jetthol a (c) Heredity of occupition Exceptions the anteract—rules (d) Guild have evolution regulation of investments and dividends, of contracts, sanction against delinquency judicial power

Finances The balance sheet Public works

Relation with civil power Paternal care Arbitration of di putes the bhanla ganka Oustdianship? The guild militia a thorn

The organised crafts

Functions and powers Plag Coins Seal Control of Municipal power Receiver of deposits and executor of en lowments Mobility Cultural life Independent development limintegration

Tools and mechanical power arc not the sole means for the production of wealth. It requires organisation, combination and laws regulating business. The progress of Indian arts and crafts depended in no small degree on the organisational genius of the people. The industrial combines in ancient India have generally been terined 'guilds' as they bear a close resemblance to those prototypes of mediaeval Europe.

Sankrit works use many words with references to local bodies, the distinction between which is not precisely defined. Generally, however, the terms sieni and päga go for industrial and commercial guilds. Kaiyata and Tatvabodhini explain sieni in Panini (II i 59) as an assembly of persons following a common craft or trading in a common commodity (ekena silpena panyena vä je jīvanti tesam samuhah srenī). The com-

¹ And sometimes gama, nigama, gana samgha, samuka, samili, etc

mentators on Manu (VIII. 41) and Nārada (I. 7) explain at nearly in the same sense, but in the Arthasastra, srenī is either a guild of workmen (II.4) or a military clan (VII. 16) or communities like those of Kāmbojas, Suriistras and Ksatriyas who subsist hy agriculture, trade and military service. So the pūga is a craft or trade

guild according to the commentators of Narada (X. 2) and Yājānvalkya (II. 31). But both Vīramitrodaya and Mitāksarā distinguish it from the śrutī as an association of persons of different castes and occupations while śrenī is a more limited assembly of people of same eraft or occupation though possibly of different castes.

As Vrhaspati points out, anarchy and insecurity in husiness were the earliest impulse to combina-Urge to union tion (XVII. 5 f.). The danger came not only from the conditions of the market but also from the severity of the civil law in regard to certain crafts.1 In fact guild life is the characteristic of an advanced stage of economic progress when "the individual mechanics, artisans or traders have sufficient business instincts developed in them, and bave achieved sufficient success in their several businesses to appreciate the necessity of organising themselves into a community for the purpose of promoting their individual and collective interests "2 The idea of organ-181ng on co-operative basis was inherent in the division of castes and allocation of functions. The Vaisyas were called ganasya in distinction from the Brāhmanas and Kṣatriyas as co-operation was necessary for acquiring wealth (Br. Up. 1 4.12 and Sankara's Com). Within the Vaisya or commoner caste the emergence of traders as a distinct body

¹ Eg, the laws of the Arthaásatra on gold and adveramiths G/ Manu—" But the large shall cause a goldannth who behaves duboncetly, the most noccous of all thoras, to be cut to pieces with razors—" IX 202 In Vavna guids of metal workers and of smiths of gold and alver are pre-eminent.

² R. K Mukherji Local Self government in Incient India

from agriculture and cattle-rearing signifies a further stage in this progress.

The plea of Geldner and of Roth for the existence of guilds in Vedic literature has been keenly Development. disputed. But the words fresthin and śraisthua used in Vedic texts would appear from their contexts to mean 'beadman of a guild' and 'his position of primacy.' For more positive evidence of institutional growth we have to look to a much later age. Buddhists placed the warrior-easte before the priest-caste and gave unrestricted freedom to the third estate, it is not youderful that guild-life is characteristic of a Buddhistic environment." 2 Early Pale Interature is full of references to guilds and heads of guilds are of the highest social positiou. They are great householders always represented in the social set of kings and princes. References in the Epics and in subsequent records, epigraphic and literary, are equally informative. In the Santiparva it is fully realised that the gana when united, acquires great wealth by the strength and prowess of its constituents (artha/caivā/dhigamvante samghātabalapaurusaih, 107. 15).

In the origin and consolidation of guilds four important factors had their part. It has already been seen that certain industries were specialised at certain places. Within the same district or town again each industry tended to be localised at a particular area of its own. The Arthasastra ordains that merchants trading with scents, garlands, grains, and liquids (gandha-mālya-dhānya-rasapanyāh) are to settle in the eastern quarter of a town. Traders in cooked rice, hquor and flesh (pakkānnasurāmāmsapanyāh) and prostitutes

¹ For references see Macdouell and Keith, Vedic Index.

³⁰⁻¹²⁶⁵B

(rupanyah) to the south Artisans manufacturing worsted threads cotton threads, bamboo mats, skins, armours, werpons and gloves and the Sudras to the west (urmsutra venucarmavarmasastravanana karavah) Smiths and work ers in precious stones (lohimanil ariinh) find place with the tutelary deity and Brahmanas in the oorth (II 4) The Agripurina males a totally different allocation except for the prostitutes and for the religious people. The goldsmiths are to be in the south west corner of the town the pro fessional dancers and musicians and the barlots to the south the stage managers the carriagemen and fishermen in the south west Those who deal in cars and chariots, weapons aud cutlery in the west liquoi merchants, officers and employees in the north west religious people in the north fruit vendors in the north east This is in the outermost eirele. In the inner blocks are, the military, the civilians and the clite of the town The Mayamata gives a more complicated plan To the south-a little to the sides should be the weavers to the north wheelunghts or earters (cakrinam) The outermost sites are divided into severil blocks reserved for (a) fish meat dry fool and vegetables (b) staple food, (c) hasins and pottery, (d) brass and bronze, (e) eloth shops, (f) rice and paddy, (g) tailoring salt and oils (h) perfumeries and flowers all serially arranged inter vening residential sites Along the roads within the houlevard are assigned stalls of jewels and precious stones, gold, elothes drugs and condiments like manistha pepper, pipal, ginger, honey, glice, oil medicines etc. In ports or in trade marts stills are not to be inter residential but more compact, set up in con inuous rows or either sides of the highway, to secure economic efficiency (Ch. 10, Il. 154 83) In a different order of planning artisans and manual workers are placed in the outermost zone of the city, to the east or north-potters burbers and other craftsmen to the north west-fishermen to the west-butchers, to the northorlinen, to the south-east or north-west—architects; further off—washermen, one hiosa (2 miles) off from the east—sweepers (Chs. 9, 29).

Plans differed in theory and in practice. But there is no doubt that industries and occupations In practice tended to be segregated from one another partly under the same circumstances which lead to the localisation of modern industries. In the towns of the Madhyadesa we como across the ivory-workers' street (dantakaravithim in Benarcs, Jat I. 320 f . II 197), the lotus street (uppalavithim in Savattli, II. 321), the washermen's street (rankavīthim, IV 82), the street of the Vessas (vessanam vithiya, VI 485), the weavers' quarter (tantavitatatthannm, I 356, pesakāravithi, DhpA I 424) and a in the eaterers' quarters (odonikagharavīthiyam, III 49) As in the town people with the same industrial pursuit flocked in a specified street or quarter, in the countryside, they congregated in the same village settlement and formed a more developed organisation A carpenter's villago with 500 or 1,000 families is often seen in the frontier of the state of Kasi or in the outskirts of the city of Benares (kasıratthe paccantagame habû vaddhakî vasanti, I. 247. kulasahassanivaso mahavaddhakigamo, IV. 159, II 18, 405, IV 207) There was a weavers' village near Benaies under a headman (Dhammapala's Com on Therig. Pss. 157 ff.) and a smith's village of 1,000 houses (sahassakutiko kammaragamo, III 281) is also referred to Brâhmanas formed sımılar villages for their scholastic and religious activities (VI. 514, Mn 41, 150) 1 The craftsmen purveyed their goods to the people of neighbouring towns and villages or executed orders from them jointly or severally (Vr XVII 11)

¹ For villages of fixtermen hunters, thieves, cinfidas penas, nata aras elescenfra, Bh. V. Ch. III, Bh. VI, Ch. III

After localisation the next factor was leadership. The the pethaka. localised industry, the gāma or the seni was frequently organised under a leader called pethaka. We hear of jethakas of carpenters, smiths, weavers, garlandmakers (III. 405) as well as of other inferior crafts and of mariners, thieves, caravan-guards, etc. Fick surmises that his office was hereditary and honorary, hased on skill rather than on age. He is prominent in royal court (III. 281, V. 282) and rich and of great substance (III. 281). He seems to have combined the functions of the village headman, the village syndic and the president of the local guild.

The third factor was heredity of occupation. From the frequent use of the suffixes kula and putta after a eraft name, it would appear that a family stuck to the same eraft the father banding down to his son his capital, eredit and accumulated experience. Later, during the period of the later law-books (Manu, etc.), with the development of trade transactions "the significance and inner compactness deepened, and heing similar to the castes on account of the traditional organisation and the hereditariness of membership, they gradually got....., as certain rules and customs with reference to marriage and interducing were developed, the appearance of reat caste, till they finally became the modern trading classes."

But occupation was not always rigidly determined by heredity or caste. This is proved by the copious literary references particularly in the Pali canon to the master and the pupil, the acariya and the anterasi in an establishment where the latter undergoes a course of apprenticeship under the former in an art which he chooses to pursue in future.

¹ Fick Die Sociale Gliederung, p 179

His rôle is not always that of a learner,—for sometimes he excels his master in skill (Jāt. V. 290 ff.). It is very often that of an assistant or a servant akin to the worst conditions of wage labour.

From Narada's rule it seems that the period of apprenticeship was very similar to the condition Terms of appren of bondage. A youngman desirous of ticeship learning a trade was free to do so. He lived with a master, worked for him and was fed and taught hy him (also Vr. XVI. 6). Like a slave by his master he should be treated as a son,2 He might not he made to do any other work than the one he was learning. The master might compel the apprentice's return if he ran away. In case the apprentice learns the eraft more quickly than stipulated in the contract, the time left over shall be his master's and all the profit derived from the apprentice during that period shall accrue to his master (also Yaj. 11. 187). It follows that he was bound down for a given length of time and that the advantage from his work was wholly his master's. If agreed upon in advance he might be rewarded with a fee on attaining proficiency, but he should continue to work for his master till the stated time was np (V. 1d-21).

The last and the strongest factor binding the constituencies as a close homogeneous unit was the operation of the guild laws. The evolution of these laws may be traced back roughly to the first six centuries before the Christian crain the form of conventions taking shape. The tendency is indicated in two rules of Gautama. "Laws of districts,

In fact Narada treats them in the asine chapter along with hired servants and slaves.

[?] Cl Mv 1 32 1, where Buddha says that the accenya ought to consider the anteroxia as a son, the anteroxide should consider the accenya as a father. He exhorts the likitius to line the first ten years in dependence on the accenya of course the rule relates to colorate an sacred leve and not no a rist.

castes and families, when not opposed to acred texts, are an authority", and "ploughmen, merchants, herdsmen, money lenders and artistins (are also authority) for their respective classes (XI 20 f, Vās I 17, XIX 7) While Gantamn is an advocate of local usage and law of caste, Manu reckons guild laws as on par with those of castes and localities. A king should settle the laws only after a careful examination of the laws of castes, districts, guilds (sreoī) and families (VIII 41, Yaj I 350 f, Narada, X 2) Vrhaspati goes farther to enjoin that the king must approve of whatever the guilds do to other people in accordance with their rules whether that is cruel or kind (XVII 18)

These rules were meaot to regulate distribution of profits and liabilities, investments and dividends Apport onment of among the members According to the Arthasistra, guilds of workmeo (samgha bhitah) and those who carry on co operative work (sambhūya samutthatarah) shall divide their earnings (vetanam) either equally or as agreed upon among themselves (III. 14) The rnles of Narada and Vibaspati on sambhuya samutthanam or joint traosaction of business are more elaborate and relate to trade guilds as well as to craft guilds. The partners must share all legitimate expenses of business such as those incurred by (a) purchase and sale of meichandise, (b) provision for necessary travelling, (c) wages of labourers, (d) realisation of dues, (e) freight, (f) care of treasures (Nar III 4 and Vivadaratnakara's com) The loss, expeoses and profit of the business are to be shared by each partner according to the share contributed by him to the joint stock A partoer is responsible for any loss due to his want of care or any action without the assent or against the instructions of his co partoers (Nar $\,$ III $\,$ 5 , $\,$ Vr $\,$ XIV 9) Similarly he is cutitled to a special remuneration for special profit gained through his rodividual action (Nar III

6; Vr. XIV. 10). The master craftsman is entitled to a double share of the profits. So also the head of an engineering firm building a bouse or a temple or digging a tank (Vr. XIV. 29).

The guilds took contract for work. The Arthasastra lays down its rules or terms between the Rules of contract transacting parties (III. 11). Rules of contract bear also on the internal affairs of a guild. Vrhaspati says that a contract executed by one is binding on all (XIV. 5). The rule of the Arthasastra is that a healthy person who deserts his company (of contract artisans) after work has been begun shall be fined 15 panas; for none shall of his own accord leave his company. One found to have stealthily neglected his share of work shall be shown merey for the first time and given proportional work anew with promise of proportional share in earnings. For neglecting again and going elsewhere he shall be thrown out of the company (pravasanam). For a glaring offence (mahāparādha) he shall be treated as condemned (dusvayad-acaret, III, 14). The Dharmasastras do not show the same leniency. According to Nārada and Vrhaspati he who disobeys the laws or injures the joint stock is to be banished. A member who fails to implement an agreement entered into by his association is to be banished and his property confiscated. According to

the work (II. 265).

The threat of expulsion for inducipline and dishonesty was the sanction of the guild laws. Accordingly the association bad complete judicial authority over its members. Vrbaspati says that the partners are to be judges and witnesses in deciding their own disputes (XIV. 6). These disputes do not

Yājāavalkya dishonesty is punished by expulsion from the guild and forfeiture of share in the profits. A disabled partner may, however, appoint a substitute to do his part of

necessarily relate to affairs of business, they might be strictly personal. Later law books emphasise the jurisdiction of local, popular courts like the *kula*, *stent*, gana and pāga—graded in ascending order of superiority (Nar. Intr. 7, Vr. I. 28-30, Yaj. II. 30). This juridical power is recognised in the Buddhist literature. A man may be tried by his guild (pūgamajhagato, Mn. 41, 114). Its interference is invoked to settle differences between the members and their wives (Vin. IV. 226). In the Suttavibhanga, it is foibidden to ord in the wife of a member inless his guild had sanctioned it. This rigid control over the affairs of a well-knit corporation was exercised by an executive body of two to five persons presumably with a presiding head which also superised the affairs of smaller associations (Vr. XVII. 10).

The finances of the guild consisted of individual earnings and contributions, fines and confiscations I i la eari inga n i expenditures on delinquent members, king's subsidy (V1 XVII 24) and profits from executions of orders (Yu II 190). Good profits accrued from the investment of the deposits which the guilds received from the king and the public as hanks! They might in their turn earmark a part of their capital to be set aside as safe deposit The Artbaśāstra prescribes on this point that those who can be expected to relieve misery, who can give instructions to artisans, who can be trusted with deposits, who can plan artistic work after their own design, and who can be relied upon by guilds of artisins may receive the deposits of guilds The guilds shall receive their deposits back in time of distress

The Smrti rules find positive illustrations from life. Four Benares weavers plied their trade jointly and used to divide their earnings in five shares, keeping four for their own and disposing of the fifth for charity.

Bārāṇasiyam pesakātā ekato hutvū tena kammena laddhakam paūca kotthūse katvā cattato kotthūse paribhuñimsu paūcamam gahetvū ekato va dānam dadiopsu.

Jat. IV. 475.

Benevolent public works and religious contributions received equal attention. Among the votive offerings at Sanchi one is attributed to the guild of ivery-cirvers. A cave inscription in Junuar records the grit of a seven-celled cave and of a cistern by the sreni of corn-dealers 1 A Gwahor Inscription (876 A.D.) records a temple-grant by a town where guilds of oil-millers (tailikasreni) and of gardeners (mālikasreni) levy a toll among themselves and assign it to the temple.2

The guilds while enjoying an autonomous life stood in close relation to the civil authority. The legal masters enjoin a paternal and fostering care to be extended to industrial combinations. Not only must the king respect the guild laws

binations. Not only must the king respect the guild laws but must also see that members thereof followed their own laws (Yāj. I. 361; Yis. III. 2; Nār. X. 2). To enforce observance of these laws and compacts among members

Bühler and Burges treh Sur, W Ind., IV 19 F. I. 1, 1, 20.

^{31-1 %5}B

similarly speak of one of bamboo-workers (vasakara) another of braziers (kasakara) and a third of corn-dealers (dbamñika) 1 The collective gift of the ivory-workers at Vedisā (Sanchi Ins. C. 189) probahly indicates that these artisans formed a srem. Later inscriptions and inscriptions from the south add copiously to the list

The antonomy and entity of the guild was as much legal as real It had its distinguishing colours Powers and functions (Mbh. III 2 6 6) In the preparations made by the royal family and citizens of Mathura to witness the wrestling bout hetween Kish and Kamaa, pavilions were erected for different companies and emporations with flags representing the implements and emblems of the several erafts (-vakarma-dravyayuktābhih patakabhih Harivamsa. 86 5) If the nigama of the coins of Taxila and of the Bhita seals refers to town corporations and not to industrial guilds. the Basarh seals of the time of the Gupta emperors show a great advancement in guld activity referring to and giving the names of bankers (sresthin), traders (sarthayaha) and merchants (kulika), their members and their leaders (prathama-kulika) The civic affairs of the mgama were dominated by powerful trade and craft guilds 2

The guild served not only as a bank receiving deposits at interest but also as a trustee and executor General traits of endowments. An endowment in a strength & weakness guild bank is reported to he permanent so long as the guild retains its unity even if it moves to a different place a This shows its mobility and organisational perfection and the public confidence reposed in it. The 1,000 families of carpenters in a gama who shifted wholesale overnight in hoats and settled in an island in mid-sea is a typical illustration of this mobility (Jat

Bibler and Burges Of cet IV 10 1, 27 2 Sce enpra, p 185

^{3 1} leet Cupta Inscriptions No 16

IV. 159) Another example is a guild of skilled (prathitasilpah) silk-weavers who migrated from Lata or southern Gujarat into the city of Dasapura and constructed "a noble and unequalled temple of the bright-rayed sun." After this the members began pursuing different occupations, e a., music, story-telling (kathavidah), ichgious discourses (dharmaprasanga); some remained weavers, others changed into astrologers (notisa) or warriors (samaiapragalbhāh) or recluse (vitta-visayasanga) Still the corporate organisation was in tact and the temple which had fallen into disiepair was restored by the same guild after a period of thirty-six years from its construction.1 The larger civic conscience and communit spirit thus stood against the disruptive ten lengtes of contradictory tastes and occupations. This also shows the extent of intellectual life and culture nursed in a mere craft guild and the amount of independent development and free lam of choice permitted within its scope But this is not the srent of the Jatakas and of the Smrtis We mis, the term plying their shuttle together, the rules regulating collective contracts for a job, the allocation of shares and dues from a joint-slock The institution imbibes cultural propensities and develops conflicting tastes in a glowing urban atmosphere. It has lost its fundamental character of manual labour and the basic unity grown upon it Tue circles srent was an association of capitalist workers serving under the strictest regimentation who could ill afford to pursue the so-called cultures and refinements as means of livelihood. The story of the Mandasor Inscription sets forth the first stage of disintegration of a well-knit craft guild with common economic interests. The process is hidden under the plaster of a higher but loose synthesis maintained only by tradition and personal association

Cullakasetthi Jātaka.

A young man of good family hut reduced circumstances.....picked up the mouse which he sold for a kākani at a shop for their cat. With the kākani he got molasses and took drinking water in a waterpot. Coming on flowergatherers returning from the forest, he gave each a tiny quantity of the molasses and ladled the water out to them. Each of them gave him a handful of flowers, with the proceeds of which, next day, he came back again to the flower grounds provided with more molasses and a pot of water. That day the flower-gatherers, before they went, gave him flowering plants with half the flowers left on them; and thus in a little while he obtained eight kahānnas.

Later, one rainy and windy day, the wind blew down a quantity of rotten branches and boughs and leaves in the king's pleasaunce, and the gardener did not see how to clear them away. Then up came the youngman with an offer to remove the lot, if the wood and leaves might he his. The gardener closed with the offer on the spot. Then this young apprentice repaired to the children's playground and in a little while got them by bribes of molasses to collect every stick and leaf in the place into a heap at the entrance to the pleasaunce. Just then the king's potter was on the look out for fuel to fire bowls for the palace, and coming on this heap, took the lot off his hands. That day the young apprentice by selling the wood obtained sixteen kahapanas as well as five bowls and other vessels. Having now twentyfour hahāpanas in all, a plan occurred to him. He went to the vieinity of the eity-gate with a jar full of water and supplied 500 mowers with water to drink. Said they, "you have done us a good turn, friend. What can we do for you?" "Oh I'll tell you when I want your aid," said he; and as he went about, he struck up an intimacy with a land-trader (?) and a sea-trader (?). Said the former to him, "To-morrow there will come to town a horse-dealer with 500 horses to sell." On hearing this piece of news, he said to the mowers, "I want each of you to-day to give me a bundle of grass and not to sell your own grass till mine is sold," "Certainly," said they, and delivered the 500 bundles of grass at his house. Unable to get grass for his hor-es elsewhere, the dealer purchased our friend's grass for a thousand pieces. Only a few days later his sea-trading friend brought him news of the arrival of a large ship in port; and another plan strock him. He hired for eight Lahapanas a well-appointed carriage which plied for here by the hour, and went in great style down to the port. Having bought the ship on credit and deposited his signetring as security, be find a pavilion pitched hard by and said

to his people as he took his seat inside, "when merchants are being shown in, let them be passed on by three successive ushers into my presence." Hearing that a ship had arrived in port, about a hundred merchants came down to the cargo, only to be told that they could not have it as a great merchant had already made a paymeot on account. So away they all went to the young man; and the footmen duly announced them by three successive ushers as had been arranged beforehand. Each man of the hundred severally gave him a thousand pieces to huy a share in the ship and then a further thousand each to buy him out altogether. So it was with 200,000 pieces that this little apprentice returned to Benares.

CHAPTER I

DEVELOPMENT AND ORGANISATION OF TRADE

Trude a natural sequel to industry The different trades Market place
The small trader or hawker Big traders carasan Correspondents Wholessle
and result trade.

Corporate organisation Partnership and guilds

Trade methods Speculation Transaction on credit Advertisement and publicity Depression The successful vendor

The setth: his fabulous weslth Stores His relation with king with fellow merchants and citizens Hereditary office? Assignee of tolls His unofficial rank Administrative lunction Benevo cut work

Trade is a natural sequel to industry. In the wake of a sippa must follow voltāra. For an industry industry look for a market for its disposal Such

markets and such transactions are necessary concomitants of any industrial effort and occur in the earliest stages of conomic life. With the specialisation of industries and their localisation in particular places whether in a whole country or in a village or in a small street of a town, this commercial intercourse multiplies in proportion. The horse-producing Sindhu and the cloth-manufacturing Kasi are brought into the same intimate economic relationship as were formerly the animal-breeder and weaver plying their trade side by side in the same village. Exchange of goods bound down the whole land of India, particularly the north, in a close economic unity to which even Rome, Egypt, Arabia, Persia, China, Indonesia and farther East were brought into brisk commercial intercourse.

Electrics and shops stockist and the middleman. The vendor stocked various goods from producers in his shop for sale We know of grain merchants (dhañinka)

who kept double-mouthed sample-bags (ubbatimukliā mutoh) to keep samples in of various sorts of grain (Dn. XXII. 5). (Merchants traded in diverse article like fruits, herhs, sugarcane, honey, ointment, planks of wood, toothbrush and smaking-pipe (Jāt. IV. 495). Among traders, practising in a town are dealers in cloth (dussika), in perfumes (gandhika), groceites (pannika), fruits (planka), and roots (mūhka) (Mil 331, 262) I Tulādhāia, the trader lived by seiltog juices (rasa), scents (gandhia), barks and timbers, herhs, fruits and roots! (Mih. XII. 261 2). (The shops were set up in rows on the two sides of the main thoroughfares or around the market place (singhātaka, for shops of the same wares to group together forming a special hazar of their own)

(Shops were not always stationary. They might be moving. In the Jatakas the hawker is a The hawker common sight. A merchant goes about from village to village hawking goods on a doukey's back (vānuo gadrabhabharakena vohāram karonto vicarati, II. 109 ff.). A petty hawker shouts with his wagon in the middle of the village (gamamajihe) with "buy my cucumber, buy my cucumber " (I. 205). A gracer's daughter (pannikadhītā) hawks minbes in a basket "buy my jujubes, huy my jujubes" (hadarāni ganhatha badarāni ganhathā'tı, III. 21). Sometimes these people evince a higher sort of business intelligence. Two potters apportion two streets in the same town between themselves to eliminate competition and peddle their pots from door to door (I. 111).)

¹ The product and the desicr are not always clearly distinguished -E g, the gandhika may mean one who prepares seems as well as one who stocks and sells them So an adont a is both a caterer and a distributor of foodstuffs

Besides these small traders there were hig merchants who collected buge cart-loads of wares Big trader caravans from their centres of production and sent them to distant countries where they might be sold at a higher price. The Jatakas are full of references to caravans or long lines of two-wheeled bullock earts such as is represented at Bharbut in the scene of the purchase and gift of the Jetavana. Their strength is given at the conventional figure of 500 wagons under a leader (satthavaba, I. 98, 368, 377, 404; III. 200, 403; V. 164, 471). "The carts struggled along slowly, through the forests, along the tracts from village to village kept open by the peasants. The pace never exceeded two miles an hour. Smaller streams were crossed by gullies leading down to fords, the longer ones by cart ferries." Regarding one of these an interesting piece of information is given. A great caravan of one thousand carts (mahāsakatosattbo sakatasahassam) nas going from the East country to the West country. Wherever it went it consumed swiftly straw, wood, water and verdure (tinokatthodakam haritakavannam). Now in that caravan were two caravan-leaders each commanding onebalf of the carts.2 Thinking that wherever we go we consume everything-they divided the caravan into two equal portions and equipped with food and provender started separatety)(Dn. XIII. 23; cf. Jat. I. 98).

(The trade magnates had "correspondents" in big and opulent cities with whom they disposed of their goods wholesale I A correspondent and frierd of Anathapindika at the border sent 500 cart-loads of local wates to harter in the shop of the Savatth merchant. The people were hospitably received, lodged and provided with money for their needs,—and given goods

I Rhya Davids Buddhist India, p 98

So the unit of 500 under the charge of one saltharaha remains in tact.

in exchange A return despatch from Anathapindika was summarily refused with insults by the border correspondent for which however he was paid back in his own coin during the next offer from him (Jat. I. 377))

The wholesale dealers distributed the wares to retail dealers on a commission or share of the profit. The rules of the Arthaéastra on retail sale seem to be based on the assumption that the latter did not purchase the goods. The sale steem to be lattered and self-them.

in better terms to derive a middleman's profit. They were rather agents or salesmen of wholesale dealers, possibly representing several at a time. The Arthreastra lays down

Retail dealers selling the merchandise of others at prices prevailing at particular localities and times shall hand over to the wholesale dealers as much of the sale proceeds and profit as is realised by them. Rules of scaled deposit shall upply here. If owing to distance in time or place there occurs any fall in the value of the merchandise, the retail dealers shall pay the value and profit at that rate which obtained when they received the merchandise.

Vaiyyavityakara yathadesakalam vikiinanani punyun yathajatamulyamudayam on dahyih Sesamupanidhina iyakhyitam Desakalatipatone vi parihinam sampradana lalikena arghena maulyam udayani on dahyih

"This rule does not hold good for servants selling their masters wares. Such merchants as belong to trade guilds or are trustworthy and are not condemned by the king need not restore even the value of that merchandise which is lost or destroyed owing to its inherent defects or to some unfore seen accidents. But of such merchandise as is distanced by time or place, they shall restore as much value and profit as remains after making allowance for wear and tear of the merchandise.

"Səmvyavalırıl**kesu va praty**ayıl esvarəjavəcyesu libreso paupatəbby im məstəm **vinastəm va m**ulyamapı mə dadyuli Deśakālāntaritānām tu paņyānām kṣayavyayaśuddhamūlyamudayam ca dadyuḥ. Paṇyasamavāyānam ca pratyaṃśaṃ. III. 12.

Elsewhere it is given that the trader should calculate the daily earnings of middlemen and fix that amount on which they are authorised to live; for whatever income falls between sellers and purchasers (i.e., brokerage) is different from profit.

Yannisrştam upajīveyuh tadeşām divasasanjātam samklıyāya vanik sthāpayet. Kretr-vikretro-rantarapatitam ādāvātanyam hhayati. IV. 2.

This is obviously the agent's commission which is to be fixed by the trader to a rate likely to give an enterprising middleman quite a decent income.

(Corporate organisation as developed in industries did not progress as far in commerce. With

Corporate erganisation: partnership. regard to industries (guild organisation was the order of the day, with commerce

was the order of the day, with commerce it was an exception, it being generally pursued individually and independently. Partnership was of course not uncommon. Vidura quotes an adage to king Dhrtarāṣṭra that concerns of wealth should not be pursued alone (Mbh. V. 33. 50). (Two merchants from Sāratthi trade with their wares in 500 cart-loads from the East country to the West country and come back to Sāvatthi with a lucrative profit.)

Sāvatthivāsino hi kuṭavāṇijo ca paṇḍitavāṇijo ca dve janā pattikā hutvā paūcasakaṭasatāni bhaṇḍassa pūretva pubbantato aparantam vicaramānā vohāram katvā hahulābham labhitvā Sāvatthim paccāgamimsu.

(They then set down to divide the returns (Jāt. II. 167). Similarly two merchants from Benares dispose their wares in the country districts in partnership (dve janā ekato vaṇijjam karontā laddhalābhā). They fall to quarrel over the share of the proceeds, one claiming share of a half on the strength of equal investment in stock-in-trade,

258 SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

another two-third on the score of superior acumen. The former wins (I. 404).

(But of the seni, gāma and pāga there is hardly any reference) in the Karle Cave is recorded a gift by the gāma of traders (vaniya-gāmasa) from Dhenukākaṭā, but (nothing is known about its nature or constitution.)

Guld Trade guilds seem to he conceived in the rules of Gautama (XI. 20 f) and in the prognosis of the Arthaéastra that traders unite to raise prices like modern corners and make a profit of cent per cent (VIII 4). (But as has been already seen individual tradesmen entered into similar compacts for mutual interest from their inherent business instinct, and these show at hest an appreciation of the community of commercial interests. Instances of co-operation are not rare. Parties of mariners voyaging by the same vessel under a petihaka may have chartered it in concert) (Jat. II. 128; IV. 138 ff; V. 75; VI. 34). Parties in a caravan were brought together for purposes of safety through long forest journeys and accepted the leadership of the satthavaha for guidance as to halts, watering, precautions against brigands and beasts, routes, fording, etc.1 "Subordination was not however always ensured (Jat. I 108, 368; II. 295; III. 200), and the institution does not warrant the inference of any further syndicalism among traders)" As regards commercial organisation, Mrs. Rhys Davids' statement stands substantially correct : that there is "no instance as yet produced from early Buddhist documents pointing to any corporate organisation of the nature of a guild or Hansa League."2 Later literature gives undisputed evidences of such leagues. For example, in the Sukraniti "a sāmayihapatra or business deed is one which individuals frame after combining their

¹ For example the merchants in a party of 1,000 under the two leaders in Dn NMIII 23. Sec supra, p 255.

² Cambridge History, p 211.

shares of capital (syadhanāméa) for some busiocss concern (vyavahāra) (II. 11. 627 f.). The reason for the somewhat later development of commercial combines was probably that trade was still a wandering profession while industrial organisations depended largely upon settled relations and ties of neighbourhood.

(Trade in the Jātakas is very often speculative. A young man pieks up and sells a dead mouse and by successful dealings works up the capital to hecome rich. The last transaction is in a ship's cargo which he holds and disposes at 200,000 pieces (I. 120-122). The outlay being 1,000 the profit is 20,000 p.c. 100, 200 and 40C p.c. are the profits at which caravau masters barter their wares (I. 98 ff., 109; IV. 2). A hoy hegins with a humble stock-in-trade, voyages to Suvannabhumi with some other merchants in a ship and makes enough moncy to recover his paternal kingdom) (VI. 34).

(Indications to the development of commerce may he had from the prevalence of several trade practices) Business deeds or documents recording a description of the property purchased and the price paid for it were known among merchants (Vr. VIII. 7; cf. Suk. III. 378 f.). Big deals were made on credit. The speculating young man bought the cargo of a ship on credit giving his signet ring as security. Sale by public anction after notification is witnessed by Straho (XV. i. 50-52) and in the Arthasastra (II. 21). Merchants advertised their goods by singing their praise themselves (vāṇijā viya vācasanthntiya. Com: yathā vāṇijo attano hhandassa vaṇṇam eva bhanati, V. 425) or tbrough an agent, c.g., the hostess of a travelling tailor (tuonavāya)

¹ Vincent Smith has corrected the reading to sale after having the royal scal (Anoka).

who on his behalf gives publicity to his profession in the village (ammi-vithealthing mini-moeth ti, si sakalaganic roces) so that in one day 1,000 pieces were earned (VI 366). Political erises had their repercussions on butiness transactions. After Rima's exile the business of Ayodhya suffered under general depression and shops remained closed for several days (Rain II 18 36 f., 71-11).

The application, indeciment eleverness and "connexion of the successful shopkeeper (papanika) are the successful shop interestingly discussed (Au I 116 f

cf Vin II 7, Vin I 2.55) He is shrewd (cakkhumi), knowing his goods (paintynin juridi) this article bought for so inneh and old for so much, will bring in so much money, such and such profit (idam pantyam evan kitam evan vikling incident ettakan mulam bhavissati cital o naryo ti). He is clever (vidhuro), skilful in buving and selling goods (kusalo hott pantyam ketim ca vikketim ca). He inspires confidence (nissay i simpanno), inasmuch as wealthy people seeing his stability give him eredit. Pos e sed of these three characteristic, a shopl eeper in no time attains greatness and increase of wealth (this angeli samannigato pipaniko in cirass eva malanatatian ya vepullitam va napunati blogesis)

Despite the absence of the guild system, that there was a certain or american in urban husiness is apparent from the role of the settlin. The words srestlin and raistlyga, used in the Vedic literature would appear from their contents, to mean 'headman' and 'his position of primacy '(Later, in Pah literature the settlin conveys the idea of one of the upper hourgeoist, a great merebant or commercial in ignate

who sends his caravan from pubbanta to aparanta or ships his cargo across the high seas. In a more technical sense the setthi was the head of this trading class, a wealthy and popular magnate who, like the rural bhojaka and the industrial jetthaka, stood in close relation to the king.) (His wealth is computed at the conventional figure of 80 ciores) (Jat. I 345, 444, 466, II 331; III. 56, 129, 300, IV 1, 255; V 382). He stocked hige quantities of grain in his granaries (I. 467) obviously to dispose in scarcity on advantageous terms. With his big capital he employed small craftsmen and benefited by their labour (setthin missaya vasantassa tunnakarassa tunnakara

The compound Rajagahasetthi is a pointer to the fact that the richest merchant of a town or village, the setthi par excellence, discharged certain specific functions and had a unique position with respect to others. In the inscriptions of the Sanchi tope the setthi of a village is in several instances mentioned without his proper name, while the gahapati appears with his name and sometimes village as well. His was a position of authority over the fellow traders. During his dedication of the Jetavana, Anathapindha, the chief setthi of Savatthi was attended by 500 settlies.

Through this leader the king maintained his contact with the mercantile community. In this capacity of a go-between the setthi filled one of the highest offices of state (setthith ma, Jat I 120 ff.; III 448, V 382, setthita, Mahavamso, p 69) The gahapati, one of the seven jewels (ratanam) of a king is explained by Buddhaghosa as setthit-gahapati.

¹ The settles, who appears with his name and place in the Korle Cave In , is an ordinary merchant, not the chief settles

This official is often seen waiting upon the king (rajupatthanam gato, III 19, rajupatthanam katvā, IV 63). His relation is sometimes informal and personal. A king desirous of renouncing the world is supplieated by his parents, wife, children, the commander-in-chief, the setthi, and the people. The setthi offers him his accumulated fortune and requests him to stay) (V 185).

The rich business lord probably led the en operative efforts of merchants in his town and was Position with citi very popular with his community sumably this popularity and influence with his community and with the people at large was the reason for his selection into king a service. The settle of Rijagaha does good service both to the king and to the merchants community (ayam kho setthigahapati bahiipakaro lañño c eva negamassa ca, Mv VIII 16) A setthi in office is honoured both by the king and by citizens and eountryfolk ahke (rampunto nagarajanapadapunto, V 382) When the princes and queens fell victim to a king's furore the citizens uttered not a word, but when the setthis were seized for execution, the whole city was troubled and the people went with their relatives and begged for mercy

(VI 135)

The setth; therefore was not a civil official in the sense the schapali of the amatya was (As an intermediary, he was half an official and half a popular figure) (As an official he was selected by the king on the basis of his wealth and influence (Jat I 120-22)) (But as the son generally succeeded to his father's trade (II 64, 236, setth musetthinam kulanam putta, Mv I 9 1) and inherited his wealth and influence, the office of the setth nominally selective, tended to be hereditary) (The sixth descendant of a settlus found continuing in the post of his forefathers (Jat V 384) There is little to distinguish between social rank

and civil office in this respect.1 The two were co-existent and a setthi fallen in social position was little likely to continue in the king's grace; nor would the king make an alternative solection when the son of the retired official was fit to take the mantle)

The specific functions of the set!hi as a civil official is nowhere clearly defined. A king by his decree makes a gift of the East market town to a mercbant (pācinavavamaijhaka

gāmam rājabhogena bhuñjā'ti) and makes the other thousand increhants his subordinate (seesnetthino elass'eva upaṭṭhākā hontu, VI. 344). There is hardly any authority to render seṭṭhi as 'treasurer's for which the Pali word is bhaudā-gārika. He may have assisted the king in framing his financial policy and advised him on the methods and rates of assessment on big business. He carried the king's orders to his fellow merchants and presumably was responsible for their execution. As emoluments for his services, the tolls, taxes and customs dues of a particular business area might be assigned to him. Sometimes he was assisted by a second (anusetthi, Jāt. V. 384; Mv. I. 9. 1) from his own class. He had little to do with the king's treasury.

With the growing industrial and commercial life of the town, the settlii rose into power and prominence and came to play a new rôle.

As leader of the most important urban class and as a civil official of the bighest rank he was the hot favourite to be contrusted with municipal administration,—to be promoted to the viṣaya-council or even to the position of Lord Mayor. The Basarh seals and the Damodarpur and Paharhpur Inscriptions throw sidelights into the civic functions of

264 SOCIAL AND RURAL FCONOUS OF NORTHERN INDIA

the setth. This is nothing strange for the head of a class who, like the upper bourgeoise of the national democratic age in Europe, were at the forefront of every liberal movement and set the example of instituted charity. The hoarded cores of Anuthpindika, emptied for the alleviation of the miseries of the poor and for the propriation of the Sangha, the great cartya cave at Karle and similar costly gifts at Kanhera, Mathian and Sanchi give a glimpse into the means and ways by which they attained to their phenomenal power and popularity.

CHAPTER II

PRICE AND MARKET

Free bargain - baggling Price quotations Contomary rates and indeterminate price Proceduring The court valuer Price regulation Statute fixed prices Cornering and inflation of price Proportion between big and small trade

L" And because they first bargain and afterwards come to terms (the priest and the king over the soma juice in terms of cow-payment) their force, about any and everything that is for sale here, people first bargain and afterwards come to terms" (Sat. Br III in. 3. 1-4.)

This practice of a "free bargain" unregulated by law and custom was widely prevalent up to the beginning of the 6th century B.C.

Prices were determined mostly by haggling,

sometimes clumbing up from a single Lahapana to 100 or 1, '00 (Jāt III 126 f) "The act of exchange between producer or dealer, and consumer was, both before and during the Jātaka age, a 'free' b irgain, a transaction unregulated by any system of statute-fixed prices. Supply, limited by slow transport and individualistic production, but left free and stimulated, under the latter system, to efforts after excellence on the one hand and to tricks of adulteration on the other,....... sought to equate with a demand which was no doubt largely compact of customary usage and relatively unaffected by the swifter fluctuations termed fashion." '13

The statement may be best examined in the light of some available price quotations which may be arranged into the following schedule:

A few customary rates are quite apparent, e.g., 100 hahacustomary rates and
indeterminate price

accor costly jewellery, 1,000 for a hall,
for a course of learning or for a visit to the

chief courtesan, 67 coppers a day for a skilful archer is

quite fair but the figures of 274 or 1,000 are pretty high to excite the jealousy of other officers. Similarly 8 coppers for each valuation is contemptuously refused as a 'barber's gift' by a price expert. But except for a few items like these it is hazardous to theorise on the basis of the Pali canonical data. (Figures are often hyperbolic and wrecklessly exaggerate Fancy prices are quoted for articles of loyal consumption irrespective of their real valuation.) (The price for a horse or mare may range from I hahāpana to 100,000.) A pair of shoes presented to Buddha may worth double the cost of building a vihāra and while sandalperfume may sell at the rate of 100,000, a pair of watercarriers may plan their merry-making with garland, perfume and spirits with a purse of 1/16 of a kahāpana. (Prices varied not only in localities and with the ingress and egress of the commodity. It depended to a great extent on the fancy of the customer and on the need and bargaining capacity of the parties.)

(But better business principles than unrestricted hargaining were just beginning to dawn. For certain commodities and in certain quarters the advantages of a fixed price were growingly realised. When two merchauts were hound for the same destination with their caravan, it was for the foolish merchant to gloat over 'fixing his own price' and anticipate his competitor. The wise Bodhisatta chose to go after him tbinking "haggling over prices is killing work; whereas I following later shall sell my wares at the price already fixed ') (aggbatthapanam nāma manussānam jīvitā voropanasadisam, aham pacchato gantvā etehi thapitagghen'eva bhandam vikkinissāmi, Jāt. I. 98).

(The beginning of price fixation is in the institution of the court-valuer (agghakāraka, agghā-panika, Com. Therag. 20, 393 ff.; Jāt. I. 124). He settled the price of goods ordered for the palace.

He stoodlhetween the dilemma of offending the king with too high a rate and of driving away the tenders by excessive cheapening In making an estimate he had to consider the fancy and liberality of his master His decision was liable to revision by the king (II 31) and he himself was not immune from hribes and baits (I 124 126) In spite of these drawbacks the system conduced to set up certain standard rates) The office of the court valuer was also gradually transformed into that of a price expert or into a ministry of hoard of piece control for the whole market The municipal hodies of the Mauryas regulated prices (Str AV 1 50) In the Arthrasistra it is ordained that the price expert shall, on consideration of outlay, quantity manufactured, amount of toll, interest ou outlay, hire and other expenses, fix the puce of merchandise with due regard to its having been manufactured long ago or imported from a distant country

Desakalantaritan'in tu pinyanam piaksepam panyanis pitim sulkam viddhimavakrayam vyayananyamsca samkhyaya sthapayet argham argbavit, IV 2

Statute-fixed prices appear first in Manu and in the Arthastra According to the Artha Statutory price and Irice control sastra a profit of 5 per cent over and above the fixed price of local commodities and of 10 per cent on foreign produce will be fixed Merchants who talse the price or realise profit even to the extent of I pana more than the above in the sale or purchase of commodities shall be fined 5 panas in case of realising 100 to 200 panas (tatah paramargham vaidhayatam kraye vakraye va bhavayatam panasate panca prin iddisate dandali, IV 2) In Manu, the king is to settle prices publicly with the merchants every fifth or fourteenth day, fixing "the rates for the purchase and ale of all marketable goods ' after consideration of their expenses of production (VIII 401 f)

With growing commercialisation new economic factors arose to set the legal price at nought. Cornering and units-Against the big business and monopoly concerns the royal statute was of little avail. It is confessed in the Arthasastra that "traders unite in causing rise and fall in the value of articles, and live hy making profits cent per cent in panas or kumbhas? (vaidchakāstu samhhūya paņyānām utkarsopakarsam kurvānāli paņe paņa atam kumhlie kumblia atam it jūjīvanti, VIII. 4). To meet this evil, "merchants who conspire cither to prevent the sale of merchandise or to sell or purchase commodities at higher prices shall be fined 1,000 panas" (vaidehakānām vā sambhūva panyam avaruddhatām anarghena vikrīņatām krīņatām vā sahasram dandah. IV. 2). Yājñavalkya also imposes the highest amercement "for traders combining to maintain price to the prejudice of labour and artisans, although knowing the rise or fall of prices" or "to obstruct the sale of a commodity by demanding a wrong price, or for selling it" (II. 249 f.). Visnu ordains the same punishments for a company of merchants who prevent the sale of a commodity by selling it under its price, and for those of a company who sell an article for more than its worth (V. 125 f.). "The sale or purchase should be conducted at the price which is fixed by the king, the surplus made therefrom is understood to be the legal profit of traders."]

That these well-meaning efforts of the state were lost upon the designing merchants is further proved by the fact that the state itself fell in line with the same tactics. As owner and controller of vast state manufactures, the king was to corner the goods and raise prices by artificial means to-increase the profit. "That merchandise which is widely distributed shall be centralised and the price enhanced. When the enhanced rate becomes popular, another rate shall be declared."

Yacca panyam pracūram syāt tadekīkrtyārglum āropayet Prāpte'rghe vā'rgh mtaram kārayet, II, 16 The state is also to take freely the advantage of the rise in prices of its merchandise due to bidding among buyers (krayasamgharse, II 6)

CTbus the state in the conception of the Arthasastra plays well the part of the scheming cartel. The transition from free bargain to cornering and price inflation accompanied that a price once fixed holds good, fair or unfair, that a transaction cannot be revoked (Rv IV 29.9), tweighed more heavily on the customer than on the seller. The saving grace of the system was that it bears no comparison with the modern American parallel in the sphero of its influence. Almost the whole of rural areas and a large part of urban business were outside the smister hold of monopolists. Small trade still controlled a big share

In a free market dominated to a great extent by the familiard of hiving and biased data as presented, it is impossible to estimate the cost of living of any class of people with regard to a particular time and place with any approximation to accuracy. We have no price figures for the basic commodities of consumption, none for the staples like wheat, barley or rice. Prices were always and everywhere fluctuating and to make the confusion worse

of the country's husiness and they in turn were freely exploited by the customers as well as by the high

husinessmen

¹ A very early evidence of how lodder grass is cornered by a speculator is in Jataks, I 121

² Cf the transact on of the Jetavann Later legists qualify this rule Vr XVIII 5, Nar IX 21

confounded the coins, viz., the pana or the kārṣāpaṇa, the māṣa or the māṣaka varied in their exchange value from place to place. Only the names of metallic tokens are found to be universal; their ratios are not uniform, their metallic contents differ and hence their purchasing power even for the same actual price. We may only just compare without dogmatising the status of a water-carrier who plans his festive mirth with 1 māṣaka or a grass-cutter who sells his hundle for the same price with the weaver of Kāśī whose fabric sells with the kiog at a faccy price if not exactly at the round number 100,000 kahāpaṇas.

CHAPTER III

THE METRIC SYSTEMS DISORDER IN MARKET

Fin dity of weights and measures Standard weights Linear measures Square measures. Fluctuation between places and times

Dishonest dealin a False scales cons and measures State as an exemplar.

Adulteratin The assister buyer From chaos to order

For commodities sold by weight and measurement, price was a still more indeterminate factor. For like coins, weights and measures varied in their standards and ratios from place to place.

References are very common in Pali and Sanskrit literature and inscriptions to standard weights like pala, drona, adhaka, prastha, khan, etc., in the measurement of foodcrops and other eatables. A few tables are available giving their metric relations

TABLE I 4 mågadhakspattha =1 kosalapattha 4 kud mba =1 prasitha

4	kosslapattha	=1 āļhaks	4 prastha	=1 ādbaka
4	ā]haks	≖I dons	4 ādheka	≃1 dropa
4	ರೆಂಭಿತ	≕l mīnikā	16 drops	=1 vin
4	mānikā	≃1 kh€m		
			20 drops	=I kambha
			10 kumbba	≈1 vaha

⁻Paramatthajotikā on Sut , p 123

⁻Sirettappakan of on Su I 150

CARLE II

10 guñja	⇒l māsa	10 māşa er 5 guñja	=1 suvarņamāja
10 mlşa	=1 karsa	16 ацчагратраза	=1 auvarna or Larys
10 karsa	=1 padārdha	4 Larşa	-1 pala
10 padardha	=1 prastha	88 gamasangapa	=1 dharapa
5 prastha	=I adbaka	20 tapdula	=1 vajradharana
20 armana	=1 kharika		
		-Aril	haśaatra, II 19
8 ratı	=1 māşā		
10 mişa	=1 agrarga		

Buddhaghosa's table corresponds very fairly with that of the Arthasāstra. In the Mabābhārata, the prastha is a small measure of barley made up of 4 kulavas (XIV. 89 32). The small prastha if Magadha may well be equated with the kudumba or kulava and the khari with the vari. The table of the Sukranīti differs conspicuously, 1 adhaka being equal to 5 prasthas instead of 4, and 1 khāri equal to 160 ādhakas instead of 64. But then the Sukranīti is a much later work and it itself admits that "these measures differ with countries."

The second table of the Arthasastra, collated with the Smrtis (Manu, VIII 134-37; Vis IV. 7-10), stands as

```
5 goū,a kṛsṇala, rati or gauraṣarṣapa=1 māsa

16 māṣa =1 kaṣṇa<sup>1</sup>

4 kaṣṣa =1 pala

Now 1 guāṇa seed or rati weigha about 1 75 grams
```

-Sakranita, II 775 78

. 1 pals =1 75 × 320 grains or 550 grains

According to the Arthaéastra 68 gaurazargapa: mitead of 80 make the weight of a dharana, se, one karşa The margun may be explained by the fact that according to the Arthaéastra, se, in the place of its composition, the weight of the white mustard seed was slightly below this of a gunty a see?

276 SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

The ratio between the pala and any of the standards in Table I is nowhere given except for a somewhat confusing statement in the Arthaéastra that

200 palas=1 drons of royal dues (ayamanam) And 187½ palas=1 drons of royal sales (vyavahankam)

If the vyavahārika drona is the standard drona of Table I, then the ayamāna drona in which the royal incomes are measured is appreciated by 6 4 per cent. Conversely if the ayamana is the real drona then the measure used for disposal of king's merchandise is depreciated by 6 25 per cent. Thus

1 drona sysman2 = 200 palas = 560 × 200 gra = 15 ibs 1 drona vysvahatika = 1874 palas = 560 × 187 5 gra = 15 ibs

If the Arthasastra clue is accepted, 1 drona equates roughly either with 8 srs or with 71 srs The shot is not very wide of the mark since during Rama's prosperous reign cows are said to be yielding I drong of milk each (dronadugha, Mhh XII, 29 58) and 8 sis is an extraordinarily high but hy no means impossible yield for a good cow I adhaka on this assumption is about 2 srs and I prastha. I a seer The proportion between the adhaka and the prastha does not discord with that in a Mathura inscription of Huviska's time where an endowment is made to provide the destitute with a daily allowance of 3 adhakas of groat (saktu), 1 prastha of salt, 1 prastha of saku (?) and 3 ahataka and 5 mallaka of green vegetables (haritakalapaka) The proportion between salt and groat works out at somewhat less than 1 12, allowing a portion of salt for the vegetables 2

Buch manipulation with metric units to raise the margin of king a profit is freely acknowledged in the Arthséastra

² Cf the Mundeswars Inscription of Udsyssena in Shahabad d sir et of the early 7th century where is recorded a grant of 2 prasthas of nice and 1 pale of o I to the god Mandaleswars. On our computation, assuming 200 pale=1 drone 2 prastha=25 pale and the ratio between oil and nice is 1 25 which is quite satisfactory. But the oil may also have been meant for illumination.

The surmise may therefore be hazarded that the following weight standards, more or less uniformly, prevailed in the Ganges valley in the centuries near about the Christian era

TARLE I

4 kudumba or kulava or magadha	prastha (=1/8 sr)=1 prastha (-1/2 sr)
4 prastha	=1 adbaka (=2 srs)
4 adheka	=1 drona (=8 srs)
16 drops	=1 kbarı or varı (=128 ars)

The smaller units, on the basis of the Sastra data may be compiled into

TARLE II

5 gunia, kranala, ratuor gaurasareapa (=1 "5 gra)=1 masa (8 75 gra)				
16 masa	***	=1 karşa (140 gra)		
4 karsa	•	=1 pala (560 gra)		
12 5 pala	***	=1 prasths (1 lb)		

None of these agree with their corresponding names in the Sukraniti. But Sukra saves us by saving that not only these measures differ with countries but even their ratios vary for particular commodities For example, in the case of an elephant's value 5 rati=1 masa quite in agreement with our Table II Several other weights are cursorily referred to in the Pali works and in the inscriptions, e g , the ammana (Jat V 297, Mv IV 1 19, Mil 102),1 acchera (Jat V. 385),2 pasata (Mv VIII 11),8 nālīka (Sn. I 81), ghataka and mallaka in the Mathura Inscription With the present state of our knowledge these names remain clusive to us.

¹ Armana of Sanskrit

^{3 =2} pala according to Sanskrit lexicographers.

Dishonest dealings ran rampant in the market and false scales, false weights and false measures were the most contenient methods. The glorious days

convenient methods. The glorious days

False scales, coins
are worth yearning for when merchants
and measures did not sell articles with false weights and

did not sell articles with false weights and measures (kutamānaih, Mbh I 61 22), a practice characteristic of the damned Kah age (III 187 53; XII. 228 70) Tulāhāta and mānahāta are in the list of disapproved gifts (Mil 279; cf Vis LIV 15) Gotama abstains from cheating with tulā, kamsa and māna i e, with scales, coins and measures (Dn I i 10; An II 209, V 205 f; Sn V 474) In a more cooprehensive list, the Sukranīti enumerates,—"Deceit by means of false weights and measures, false and counterfeit coins, unscientific medicinal extracts and other preparations, passing off of base metals for genuine and high class things and food adulteration, all these channels of dishonest transactions are to be checked "(I 590-92)

According to the Aithasastra the state itself is to derive some profit by using different weights and measures from those current in the market, i.e., higher

O atrol of unfair ones for royal purchases and levies and lower ones for sales of royal merchandise.

But the same work, while setting up a bad example in the state, enters into long philippies against the subjects and prescribes a fine of 200 pāna for those who cause to a merchant or purchaser the loss of even \$\frac{1}{8}\$ of a pana by substituting with tricks of hand (bastadosenācaratalı), false weights and measures or other kinds of inferior aiticles (tulāmānāntaram argbavarnāntaram vā dbārakasya māpakasya vā) \$\mathbb{Z}\$ be class of merchants who lead in these underhand methods are the goldsmiths adopting false balances (tulāvisama), removal (apasārana), dropping (visrāvana), folding (petaka) and confounding fpunka) with several ingenious tricks described in detril under each bead (II. 14). Another

practice was to pass had articles as good ones "The sale or mortgage of articles such as timber, 110n, jewels, robes, skins, earthenware, threads, fibrous garments (valka), woollen clothes (romamayam) as superior though they are really inferior (latamityajatam) shall be punished with a fine eight times the value of the article" (thid . Yai, II 245f.). sale of mortgage of inferior as superior commodities (sarabhandam ityasuabhandam), articles of some other locality as produce of a particular locality (tapatam ityatapatam), adulterated things (radbayuktam), decertful mixtures (upadhiyuktam), desterously substituted articles to those just sold (samutparivartitim) shall be punished with a fine of 54 pana and shall make good the loss ' "Those who conspire to lower the quality of works of artisans, or to obstruct their sale or purchase shall be fined 1,000 pana (kırusilpınam karmagunapakarsam ajıvam vikrayam krayopidhanam va sambhuya simutthapayatam sahasram dandah) " " Adulteration of grains, oils, alkalis, salts, scents, and medicinal articles with similar articles of no quality (dh'inya-sneha-ksara-lavana-gandha-bhaisaya-dravyanam samavarnapadhane) is fined with 12 panas "

Adulteration was very common in business dealings Laphivalkya repeats (II 244) the injunction of the ArtbaAdulteration sastra and Vibaspati lays down "A merchant who conceals the blomish of an article which he is selling, or mives had and good articles together, or sells (old articles) after repairing them, shall be compelled to give the double quantity (to the purchaser) and paya fine equal (in amount) to the value of the article "(XXII 7. 13). Manu censures adulteration of grain (XI

50) In the Jatakas it is a current malpractice (I 220) and

³ The worst offence in business transactions is to combine into a conspiracy to drive away from the misket a competitor by unfair disparagement of his produce or ty block up his sales and purchases. Com

Thus not only the huyer and the seller but sometimes also the middleman or the price expert has his share of the spoils in a market dominated by inscrupilous pursuit of wealth

There could not he any clearer proof of straying into unfair husiness than the heavy fines imposed by statesmen and law-givers and the damnation of Kali or threat of perdition held out hefore the public by those who stood for ethical values even in the puisuits of gain. It is hecause of this widespread anarchy that Manu has to confess that pursuits of trafficking and usury are by themselves a mixture of truth and falsehood (satyunta, IV 6). Traces of order were however emerging here and there. Every market had its standard weights and measures as evident from the current lists of names, though they fluctuated from place to place and time to time introducing an element of chaos in

a Superintendent of Commerce (panyādhyakṣa) to supervise weights and measures and prevent deception with false weights and scales (II. 14). Of the Mauya Empire Inttle is known about the function of "the great officers of state" who "have charge of the market"; but about the fourth body of the municipality of Pāṭaliputra it is definitely said that it superintended thade and commerce, its members having

charge of weights and measures (Str. XV. 1, 50).

inter-janapada commerce. The Arthasastra conceives of

Road making and maintenance Transit River routes Dangers of overland trade Folice,-civil and in remark Difficulties of caravan ourney The motive

force of gain

The semi-anarchical business conditions did not stand in the way of inter-state commerce. The self-sufficiency and isolation of gamas and janapadas were broken by active trade and long linglinarys of commerce intersecting between them. The specialisation and localisation of particular industries in particular janapadas were sufficient aige for exchange of their products stimulated by a free market in which profit to the time of 400 per cent was not an unexpected but. Long lines of caravan plied along the cross-country roads linking into a common market the horse of Sind, the wool of the Himplayas, the mushin of the East and the pearl of the South

The main overland routes resolve into five systems, linking the middle Ganges valley (a) with the upper Godavan valley and the southwestern coast, (b) with the lower Ganges valley and the eistern coast, (c) with the Sindhu and the Indus delta, (d) with the Indus delta, (d) with the Indus delta, (e) linking the southwestern coast with Gandhura Each of these systems have extensions to distant foreign countries to the east and to the west, the first and second by ser, the third and fourth by land, the fifth by land on one side and by sea on the other

CThe central route of the first system is what was followed by the pupils of Bāyari accurately des-(1) North-south : cribed in the Suttanipata,-i.c., from Pratisthina-Stavasti. Patitthana of Alaka to Mahissati, Ujieni, Gonaddha, Vedisā, Vanasabhaya, Kosāmbi, Sāketa, Sāvatthi, Setavya and Kapilavatthu. Southward from Kapilavatthu and within the middle Ganges valley this route was extended to Kusinārā, Mandira, Pāva the city of wealth, Vesāli of Magadha and to the beantiful Rock Temple (Pasanika Cetya), the destination of the party (Vv. 1011-13). It went farther south to Pitaligama (later Pataliputta). Nalauda Rajagaha and probably Gaya. During his last ministering tour from Rājagaha to Kusinārā, Buddha erossed the Ganges at Pātaligāma and made eleven haltings besides that at Vesāli, at gamas und nagaras (Dn. 11. suttanta XVI. 81 ff). Parts of this high-road are noticed elsewhere, c.q., that (addhanamagga) from Kusinārā to Pāvā (Jāt. VI. 19: Dn. XVI. iv. 26) and that between Sāketa and Sāvatthi (Mv. I. 66.1) traversed by king Pasenadi of Kosala in relays of seven carriages (Mn. 23; Sn. IV. 373). Probably the

yana (II. 80) eovered part of this trunk road.

The main route had its branches and off-shoots. The nisāda country located in the north of Avanti at the foot of the Vindhyas had its connecting roads with Kosala and Vidarbha (Mbh. III. 61. 21-23) and with Cedi' (61. 131) along which caravans are found plying. The first must have converged with the great Ujjayini-Ayodhyā road and the other two were possibly linked with this through Ujjayini. But the foremost ancillary routes of the Pratisthāna-Srāvasti

great road-construction between Ayodhyā (Sāketa) and 'the Ganges en route the Dandaka forest described in the Rāmā-

Located by Pargiter on the bank of the Jumps, south-east from the Chambal towards Karwi. Its capital Suktimati is identified somewhere near Banda.

system were those connecting its northern and southern portions to the great western seaport of Bhārukaccha. According to the Periplus much cotton cloth was brought down to Barygaza from the metropolis of Ahiria called Minnagara or the city of the Sakas (i.e., Ujjayini) (47) From Ozene "are brought down all things needed for the welfare of the country about Barygaza and many things for our trade agate and carnelian, Indian muslin, and mallow cloth, and much ordinary cloth " (48) In the south Bharukaccha was connected by means of eart tracks with the Godavari load leading to Pratisthana and Tagara "There are brought down to Barygaza from these places by wagons and through great tracks without roads (because of the hills) from Paethana carnelian in great quantity, and from Tagara much common cloth, all kinds of muslin and mallow cloth and other merchandise brought there locally from the regions along the sea-coast (Eastern coast)" (51). These western extensions of the main road became husy with traffic after Bhārukaccha echipsed Roruka as the chief outlet of Indian goods for the western world. The terminus of the eastern route was the seaport of

(1) Southwest south Cast I Birgulaceha Kausambi Tamralipti. It met the Pratishana-Stävasti road at Kausambi 110 Gayā and Bārānasi. Traders seen on journey from Benares to Unjein must have taken thus course (Jāt. II. 248). There was much traffic by boat also along the Ganges through the riparian cities of Campā, Pataliputra and Bārānasi (Jāt. II 112; IV 5-17, 159; VI. 32-35). The muslins of Vanga, Pundra and Kāši reached Ujjayını along these land and river routes to be exported abroad from Bhārukaccha. The Tamralipti road and the lower Ganges must have had feeding routes opening up the interior of Bengal There is very little concrete evidence of the overland trade to the east of Campā and Tāmralipti D

The east-west route ran between Pāṭaliputra and the
mouth of the Indus after the city had
acquired impensal eminence. It had

a nuclens between Magadha and Sovīra from earlier times (VVA. 336, 370) possibly reaching Rotuka the old scaport situated somewhere on the gulf of Cutch. This is the connecting road from pubbanta to aparanta through which merchants are frequently seen plying in the Jātakas. Between Kosāmbi and Bārānasi it converged with the Kosāmbi-Tāmralipti road. Beyond that its exact course is not known. From the Delta it continued through Iran to the west. Horses from Sind and from Iran (Kosmas—quoted in McCrindle) were imported along this road to the Gangetic cities.

The rnyal road from Pātaliputra to the north-west frontier is specifically mentioned by MegastheCampa Polykalavati nes (Str. XV. i. 11). The main hody
of this road existed long hefore the rise
of the Maurya Empire, in the palmy days of Videha linking
Mithilā with Gandhāra and Kashmir (Jāt. III. 365). Passing
through the city of Arithapura and possibly the Pañcāla
city of Kampilya (VI. 419, 463), it crossed the Madra
city of Sākala (Mnl. 161.) and met Taxila and Puşkalāvatī in Gandhāra. To the south-east it extended from
Mithilā to the Anga city of Campā (VI. 32) thus linking

Further details and haltings of this Campā-Mıthilā-Kampilya-Sākala route may be gleaned from the course taken by the messengers from Kośala to Kekaya in the Rāmāyaṇa. Starting from Ayodhyā along river Mālinī flowing between the country of Aparatāla in the west and the janapada of Pralamba in the north, they forded the

up the farthest east to the north-western borders of India.

¹ Cunningham locates this in Alor of Sind

The additioning gas between Mathera and Vershia was probably a part of this system (An II 57); the location of the letter is not known

290 SOCIAL AND RURAL PRONOUS OF MORTHERN INDIA

Ganges at Hastmāpur, traversed the Pañcāla country and proceeded westward through the heart of Kurnjāmgala. They next crossed the river Sāradanda, entered the city of Kulingā, left behind the twin villages named Tajuvihhavam, crossed the river Ikṣumatī, passed through the region of Bālhıka along rivers Vipāsa, Sālmalī, etc., to the city of Gurvraja,—capital of Kehaya (H 68. 12fl.).¹ This is the same road stretching between Pātaliputra and Kājamgala at the foot of the Humalayas which a settlhi with 500 wagons is seen crossing (Mil. 16 I.) (Horse-Caelers from Uttarāpatha travelled by this road to Benares) (Jāt. II. 31, 237). (The Himalayan products of skin, wool, edible spices, precious stones and gold bound for the plains, took this road by its northern branches.)

The fifth and the last road system of the north

tő) Southwest-north west: Bhrguksccha Puskalavati connected Bhrgukaccha with Gandhāra.
The earliest reference to this is in the
Periplus where it is found extended up

to Puskalāvatī (47) whence it had further connexions with Kasyapapura or Kashmir, Paropanisus or the Hindukush, Kabul and Soythia, hringing the spikenard of these places for export through Barygaza (48). The exact course of this Bhārukaccha-Puskalāvatī road is not known.

The east-northwest and the west-northwest road systems

met at Puşkalāvatī and thence they converged to proceed through the Pamirs to Bactria. Raw silk, silk yarn and

to Bactria. Raw silk, silk yarn and silk cloth thus found their way from China through Bactria to Barygaza and to Damirica by way of Ganges (64). From Bactria the road coursed through Central Asia to the west.

"People have been cooveyed from the Oxus through the Caspian into the Cyrus and Indian merchandise can be brought by land to Phasis in Pontus in five days

^{).} Bharats takes a shorter route through the countryside, and wild regions press in ably because he was in a horry.

nt most "(Pliny, VI 17) Aristoboulos also avers "that large quantities of Indian merchandise are conveyed by the Oxis to the Hyreanian (Caspian) Ser and are transferred from thence into Albania by the Cyrus and through the adjoining countries to the Euvine" (Str XI vii 3) This north western route leading from Gandhara to the Middle East was much preferred to the western route from Indus through Persia to the Levant In the first quarter of the second century BC the Greek invasion from Bactria through the Kabul valley to the Junior and a century later the Saka invasion from Seistan into the country of the lower Indus took these routes in the north-west and entrenched into a position commanding the great central Indian routes from Ulianian

The north western route beyond Pushalvati, because of these constant war and tribal movements of the inents, was not very hospitable to international trade. The catavan traffic of these regions was not regular but incidental, subject to depredation of savage tribes. It was much reduced by Parthian wars in the first century A D'giving a tremendous impetus to ceaborne trade from Barygran. The road to China was equally unsafe until the subjugation of Turkestan by that empire. "The land of This is not easy of access, few men can come from there and seldom." (Peri 64). With the rise of the empire of Kanisla,

The Parthuans I ad done what they could to control and organ so it and to le y indute on the Roman merchants but it ey had not controlled it to it e sastward. 292 SOCIAL AND RURAL ECONOMA OF FORTHERN INDIA

trade with Mesopotamia and China became more secure

The trunk roads were taken care of and ferries maintained (Mv III 20 f) by the successive Road making and janapadas through which they passed or maintenance where they occurred Bridges are nowhere mentioned There were shady trees on both sides of the roads, wells for dunking water to which Emperor Aśoka gave much attention (R E II, P E VII), 1 relays of horses of carriages for travellers at intervening stations and rest houses (avasath ignia) or choultives set up by the charitable millionaires or by village or mumcipal bodies In the Maurya Empire they were marked with signboards noting turnings and distances at intervals of 'ten stades' (5ti XV 1 5.) The Ramayana gives a graphic picture of a hold road-making project. Soil specialists, surveyors and carpenters were requisitioned, road-guards posted at places under construction Forests were cleared, trees planted in sparsely vegetated places by the highway, ditches filled. hills levelled, tanks excavated and picturesque cities built on_both sides of the road (80).

A fair part of the inland trade was carried along the rivers of the Ganges and the Jumna and the large number of tributaries descending into them from the Himalayas and the Vindliyas Boats plied for hime. Sometimes they ran

express Where a water-course could be availed of, the land route was generally dispensed with It was preferred

Ming Ti (who ruled from 58 to 75) introduced Buddhisso into China by the invitation of two find an Scamena hásyapa Málanga and Bhársus who arrived in 67 AD (Takaksus Introduct on of It ing p will Before such an invitation there must have been considerable activity on the part of the missionaries then as now the forerunners of commerce ? mankind has been blessed with many such blessings by the previous

kings as by me "

to sail down from Beoares to Tamralipti despite the caravaoroute (Jat. IV. 15-17). Probably the water-routes were comparatively safer, easier, sometimes quicker and hence less expensive. The roads penetrated through hills and forests which were favourite resorts of heasts, robbers) (Jat. III. 403) and Yakkhas (III. 200). A caravan straggled in a forest by heasts and robbers is a choice analogy (vyālataskara-samkīrne sārthahīnā yathā vane, Mbh. IX. 3. 13). A carayan of seafaring merchants on their way to sea, while resting in a monotain cave is attacked and exterminated by an infuriated elephant (XII, 169, 1). In the unsettled civil conditions of the times there was no check to these depredations. The Maurya police for a time must

have improved the conditions a little and Police: evel and here and there wise statesmanship, alert of the importance of import and export trade came into grips with the problem.1 But the measures touched only the friege when effective communications were lacking and whole tribes had to depend on a maraudiog life. The situation gave rise to the typical institution of the age. Bands of caravan-guards cropped up on the same lines as robher gaogs under the command of a ietthaka settling at the entrances of forests and hiring themselves out

to passing caravans for safe escort.

Bodbisatta paūcapurisasataparivāro ataviārakklikesu jetthako hutva atavimukhe ekasmim game vasam kappesi. So bhatim gahetvā manusse atavim atikkameti, Jāt, II. 335.

A wealthy Brāhmana travelling from the East to the West (i.e., by the road between the Ganges valley and the Indus delta) with 500 wagons hired a coovey who lived at

¹ Eg, in the Arthaéastra the office of the corgraphic whose function includes the escorting of caravans and tracking of robbers,—a tax being levied for the policing on those who benefited by it.

the entrance of the forest at 1,000 pieces. They were defeated and the Brāhmana taken away by a man-eating monster. The men rose and gave a chase to preserve the sanctity of their contract and recovered their paymaster at the peril of their life (V. 471). Another earavan-lender who bired guards for the same amount (atavipālanam sahassam datvā) through a forest was in the same way faithfully defended by the warders against an ogre (V. 22).

A caravau journey was beset with other and more numerous difficulties. These are lucidly set forth in the Jataka stories.

A caravan merchant when about a night's journey from his destination, after supper relieved the Difficulties of cara earavan of the surplus wood and water. van journey The pilot sat in the front eart. "But so long had he heen without sleep that le was tired out and fell asleep, with the result that he did not mark that the oxen had turned round and were retracing their steps. All night the oxen kept on their way, but at dawn the pilot woke up, and, observing the disposition of the stars overbead shouted out, 'Turn the earts round! turn the earts round!' And as they turned the earts sound and were forming them into line, the day broke. 'Why, this is where we camped yesterday, cried the people of the earavan. 'All our wood and water is gone, and we are lost.' So saving, they unyoked their earts and made a laager and spread the awning overhead; then each man flung himself. down in despair beneath his own cart " (I. 108).

The aparanta and the Gandhāra routes bad to traverse the arid lands of Sind and Western Rajputana. In crossing the desert the earavans are said to travel only in the night and to be guided by a 'land-pilot' (thala-nyyāmaka), who just like mariners, kept the night route by astronomical observations (I. 107). The traders knew no obstructions. They nego-

tiated hills, forests and deserts, defied all predators human, animal and ethereal—not from any spirit of blind adventure but from the love of gain. No wonder they bartered their goods for three or four times their value. The unprotected civil condition reacted on the market. It fits well with free bargain and speculative business.

(While inland trade moved mainly along roads and rivers, foreign trade was carried across the seas.

Development of mare time trade

Evidences of bold sca-voyages come from the earliest literary references of the Rgveda. The early Smiti works while laying these under severe strictures for Brahmanas, only show the futile attempt to arrest a practice which had come to stay. Baudhayana pre-cribes loss of caste to transgressors (samndrasamyanam, H. 1 2. 2) and Manu excludes them from entertainment at the śrāddhas (III. 158). But the former admits: "Now the customs peculiar to the North are, to deal in wool, to drink rum, to sell animals that have teeth in the upper and in the lower jaws, to follow the trade of arms, to go to sea " (I. 1. 2. 4), a clear evidence of the commercial activities of the people of Sind and the Punjab across the Indian ocean. Expert

¹ For references see 8 h. Mukherji Indian Shipping pp 53 55

voyagers (samudrayānakuśalāh) are recognised in Manu's code as respectable enough to he authorised to fix the rate of interest on money lent on bottomry (VIII. 157) 1 apparently no stigma attaching to them. In the Rāmāyana a boat in mid-sea loaded with heavy cargo is an apt metaphor (IV. 16. 24; V. 25. 14). Sugrīva gives instructioos to his emissaries, sent in search of Sītā to include islands, mountains and sea-ports in the quest (samudramavagādhānsca parvatām pattanāni ca, IV. 40. 25). In a verse of the Digha merchants are known to "have crossed the ocean drear, making a solid path across the pools " (ye taranti annavam saram setum katvāna vasijia pallalām, XVI. i. 34). In the Anguttara voyages lasting for six months are well-known facts (presumably with haltings) made in ships which could be drawn up on shore in winter (An. IV, 127). The Jataka verse is sufficiently familiar with " a ship full-rigged for distant seas " to use it as a metaphor (III, 478).

To meet the demands of sailors, ship-building had to be cultivated as a separate industry. Qualities Ship building of wood were investigated, technicalities of construction were perfected and the art was studied as a separate branch of science. The Yuktikalpataru, a Sanskrit work on certain industrial products of India, makes an elaborate elassification of ships of different size and shape giving technical names to each and their parts and quotes from a lost earlier work of Bhoia on the various qualities of wood used. In the Ramayana, Guha's boats are fitted with massive bells and banners, well-piloted and well-knit (yaktavāhāh susamhatāh, II. 89 17) quite fit to meet the billows and the blasts. During Alexander's invasion, the Xathroi ran huge dockyards and supplied to the invader galleys of 30 oars and transport vessels (Arr. Anab VI. 15).

¹ Nitáyana and Nandana give a different rendering of the verse. -39-1°05R-

The Mauryas kept the industry a state monopoly and expert builders were maintained as state servants not allowed to take private orders (Str XV 1 46)

The vessels were sufficiently big and strong to earry a heavy cargo Guha's flotilla carried besides men, chariots. horses, bulls and carts although elephants Toppage had to be swam across The fleet supplied to Alexander by the ship builders on the Hydaspes whose strength is computed differently by the Greek writers between 800 and 2,000, accommodated 8,000 troops, several thousand horses and vast quantities of supplies. The ship which took prince Vijaya to Ccylon had 800 passengers according to the Mahavamso (Turnour s, 51) The freseo presentation at Apanta of his landing shews horses and elephants carried in these boals. In the Jatakas the tonninge is given at 500 (II 128) and 1 000 (IV 159) passengers, or 7 caravans with beasts (VI 30 ff) In the Samkha Jataka a rescue vessel at sea measures 8 usabha × 4 usabha × 20 yatthika 1 According to Pliny the tonnage is 3,000 amphorae (cub ft of nater) or 75 tons

There were hig ship owners who kept their vessels at ports and took merchants with their wares to their destination charging a freight for the transit (yath) sadbano naviko pattane sutthu katasumko mahāsamuddam pavistita, Mil 359) that there is no settled rate for the seas (VIII 406) showing that here also free hargain reigned supreme and that regulation was futile. Sometimes there were joint owners resembling a shipping agency, and Manu lays a law that they are collectively responsible for the damage caused by their fault to passengers' goods (VIII 408 f). In the Arthasastra as well, which provides for the hiring

out of state vessels to merchants and to fishers of pearls and conch shells, there is a similar law that hire charges are to be remitted and losses made good if the slip foundered from their own defect (II 28). According to Mexasthenes the Maurya admiralty let out its ships on hire to professional merchants (Str XV i 46) bringing a lucrative income to the treasury above the regular port dues and customs duties.

There were expert professional pilots who lent themselves for hire to shippers or to merchants. In the great seanort towns were organised guilds or crews Crews and pilots under a shipper (nivvamakajetthaka) who took charge of vessels at the requisition of sea going traders and plied their calling from father to son (Jat IV 137) It is not known whether the ancient pilots were acquainted with the mariner's compass. The Pali word macchavantra' has been supposed to be for that instrument and a round device at the prow of a ship in The compass and the crow a Borobudur senipture has been identified to it For ascertaining directions the mariners observed the stars at night. They took directiongiving crows (disakaka) on board, and like the ancient Phoenicians and Babylonians, let them off when they lost sight of land. The coast was found in the direction taken by the hird (Jat III 267) That this practice was devised from very early times is apparent from the passage of the Rg veda, I - "Varuna, who knows the path of the birds flying through the air he, abiding in the ocean knows also the course of the ships " This is referred to as a very ancient practice in a well drawn parable

"Long long ago, sea furing traders were wont when they were setting sail on an ocean voyage, to take with them a

¹ It is wrong to call it a law of marine susurance stage reparation does not cover damage due to accident

land-sighting hird. And when the ship got out of sight of the shire they would let the land-sighting hird free (tiradassim sakenam). Such a bird would fly to the East, and to the South and to the West and to the North, to the Zemith and to the intermediate points of the compass (anudisam). And if anywhere on the horizon it caught sight of land, thither would it fly But if no land, all round about, were visible, it would come back even to the ship." (Dn. XI. 85; An. III. 367)

Pliny testifies to the prevalence of the custom in the South "In making sea-voyages the Taprohane mariners make no observation of the stars and indeed the Greater Bear is not visible to them, but they take hirds out to sea with them which they let loose from time to time and follow the direction of their flight as they make for land." (VI 22).

Ships set sail from the pattana or pattanagama, generally a sea-port but sometimes also a river port having direct access to sea. The Malabar and the The pattanas Koromandel coasts were dotted with such aca-ports catalogued with their busy traffic in the Periplus (51ff) In the north, the most flourishing sea-port was Bharukaccha "in the kindom of Bharu" (Jat. IV. 137) on the estuary of the Narmada. A little south of it was Surparaka "formed by the ocean in the south" at Kaśvapa's command to accommodate Paraśurāma after he had exterminated the Ksatriyas (Mbh XII 49 67). A third north-western sea-port figures large in the Periplus uamed Barbaricum at the mouth of the Indus. More ancient than these was Roruka, later known as Roruva, the capital of Sovira (Jat III. 470; Dn. II. 235; Div p. 544). Its exact location is not known but must have been somewhere on the Gulf of Cutch.1 The Jatakas mention another

¹ Cananagham, however, identifies this with Alor in Sind

western port named Karambiya (V 75) about which no further information is available. What Bhārukaccha was in the West, Tāmralipti was in the East. It commanded the mouth of the Ganges and from there the eastern seaborne trade of the rich janapadas on the valleys of the Ganges and the Jumna. There must have been other prosperous sea-ports on the delta of the Ganges and the Mahanadi serving as the outlets for the specialised industries of Bengal and Orissa. But the overseas trade beyond Tamralipti both to the East and to the South is a sealed book to us

About the beginning of the Christian era Indian shipping was sufficiently expanded to reach all the known ranges of the commercial world. The Periplus is an eloquent testimony to the far-reaching western trade¹. Thina and its silk hegins to be prominent in Indian literature from this time and the Milindapañho, a contemporary work, avers that the ship-owner getting rich with freights paid in a sca-port, embarks in the high seas and sails to Bengal, Malay, China, Gujarat, Kathiawad, Alexandria, Koromandel coast and the East Indies or to any other place where the ships congregate

The earliest trade communication in the west was with Mesopotamia Keneddy makes out the case for Babyloman

I is the age of the Periplus, the merchants of the country round Dargaza traded to Arabia for gums and necesse, to the coast of Africa for gold, and to Malabar and Ceylon for peep rand cumamon and thus c mpleted the naw gation of the centre lad an ocean \(\text{\cong homeone of it e Ancente, \text{\cong homeone of it e Ancente, \text{\cong homeone of the enter}}\)

commerce from Bharukaccha and Surparaka at the latest hefore the 7th century B. C.1 Connecting Mesopotamia the sea-voyage references in the Rg-veda with the appearance of the word sindhu for muslin in a Babyloman list of clothes, Sayce establishes this trade with the Indus valley as early as 3,000 B C.2 Later oo, this trade diverted mainly to the Dravidians since the Indian names naturalised in the west were Tamil-not Sanskrit or Pali. The Mesopotamian trade is directly referred to in a Jataka story where traders from Iodia dispose of a crow and other wares after strenuous higgling (III 126 f.) Elscwhere the name of Bayeru or Bahylon is conventionally thrown in into tales of shipwreck without any particulars. Evidently the sea-route to the Euphrates was still too strenuous to afford regular communication.

Indo-Mesopotamian commerce had three routes,-a searoute along the coasts of Sind, Gedrosia and Iran, another

Euphrates route .

a mixed water and land-route from Gandbara and Bactria along the Oxus aud across the Caspian and the Black seas and a third overland route from Sind through Iran. Iran was thus the highway of Indo-Bahyloman trade-the sea-route passing through its territorial waters, the land-route through its soil. It figures in India's commercial horizon from much earlier times than the 7th century B. C. X route across the high seas between India and its coasts is supposed to have existed in the days of Buddha from the Chinese legend embodied in the Dipavamsa relating the founding of a colony from Ceylon on the Persian Gulf. Through the eastern campaigns of Cyrus (558-30 B C.) the Medo-Persian kingdom was brought into more or less direct contact with India. Prohably the Indus valley had a favourable halance

2 Dibbert Tectures

of trade in the 5th century B. C. with Persia and other countries so as to enable it to pay Dirius every year 360 Euboic talents of gold dust working out to 9 tons and 5 cm's.

In the days of the Periplus constal voyage from Broach to the Euphrites was a rigular affair of merchants. To the ports of the Persian Gulf, riz, Apologus and Ommana "large vessels are regularly sent from Barygiza loaded with copper and sandalwood and tumbers of tenknood and logs of blacknood and ebony." From these ports "there are exported to Barygaza and also to Arabia, many pearls, but inferior to those of India, purple, clothing after the fashion of the place, wine, a great quantity of dates, gold and slaves." The trade which at present centres at Babrein has almost the same last of imports and exports.

As the approach to the Euphrates by through Persian waters, so the way to the Nile and the Mediterranean led through the Arabian Agathirendes (177 B C) quoted by Greak writers, describes Sabren (Yemen) as holding the monopoly of the Indian trade. From the great marts of Muza (Mokha), Cana (Bir Ah) and Moscha (2 mi east of Tika) on the southern coast, Arabiship owners and sea-farers traded with the Somain coast and with Barygraz "sending their own ships there" in competition with the Egyptian Greaks (Peir 21, 27). They brought from Damirica and Barygraz cloth, wheat and sesame oil and if the senson was life they wintered at the harbour of Moscha exchanging those Indian goods for frankmeense "which hee in heaps all over the Sakhahite

^{4 &}quot;This is said still to be the case, the Balrein reads leng of a yellower tint than those of the Numer fisheres int hold of their lustre better, particular y in trop call duster, and therefore slways and demand in 17 day. "Schoff

country" (32). An important halting place between India and Arabia was Dioscorida nr Socotra, the island of all races and the centre of international trade not far from the time of Abraham. Egyptians, Arabians, Secotra Africans and Indians from the gulfs of Cutch and Cambay met here to exchange their eargo and settle colonics so that at the time of the Periplus the inhabitants were a "mixture of Arabs and Indians and Greeks" The voyagers from Damiriea and Barygaza "bring in rice and wheat and Indian cloth, and a few female slaves; and they take for their exchange eargoes a great quantity of tortoise-shell" (30, 31).

Beyond Socotra and Arabia, the Mediterranean route passed along the Somali and Berber Berbera coasts. In the Periplus Malao (the Berber country) is described as a great intermediary mart between India and Egypt. ".....From the district of Ariaca across the sea, there are imported Indian from and steel, and Indian cotton cloth; the broad cloth called monable and that called sagmatogene, and girdles, and coats of skin and mallowcoloured cloth; and a few mushes and coloured lac " (6). Other imports were Indiau copal and maeir (8). "And ships are also customarily fitted out from the places across this sea, from Ariaca and Barygaza, bringing to these far-side market-towns the products of their own places; wheat, rice, clarified butter, sesame oil, cotton cloth and girdles, and honey from the reed called salkhari. Some make the voyage especially to these market towns, and others exchange their cargoes while sailing along the coast." (14).

¹ Dioscorida is a corruption from the Sanskrit 'Duipa Suklifidi ara' - 'the island abole of blies. For further associations of the Island with India and survivals of Today influences see Schoff, pp 133 ff

Kankamon Pliny says it is a dye, Dioscouldes an exudation used as incense. 3 An aron atte and medicinal bark

"The unportant thing to be noted here is that these agricultural products were regularly Arab monopoly at Red Ses shipped, in Indian vessels, from the Gulf of Cambay, that these vessels exchanged their cargoes at Cape Guardafin and proceeded along the coast, some southward, but most westward; and that according to 25, Ocelis, at the entrance to the Red Sea was their terminus, the Arabs forbidding them to trade beyond Between India and Cape Guardafui they apparently emoved the bulk of the tride, shared to some extent by Arabian shipping and quite recently by Greck ships from Egypt . >on the Somali coast they shared the trade in an incidental way, and they received their return cargoes at Ocelis and shared none of the Red Ser trade, which in former times the Arabs of Temen had monopolised, but in the days of the Ptolemies the Egyptians had largely taken over 112

After Zanzibar the next objective was Egypt Strabo quotes the story of Posidomos how a Egypt eertain Indian alooe in a ship, pieked up by the coast guard of the Arabian Gulf, related that he had started from the coast of India but lost his course and reached Egypt alone, all the companions having perished with hunger Thereafter he headed a trading mission sent by the Egyptian prince Euergetes II to India " with a good supply of presents, and brought back with him in exchange aromatics and precious stones, some of which the Indians collect from amnigst the pebbles of the river. others they dig out of the earth, where they have been formed by the moisture, as civitals are formed with us " On the return journey of a second vnyage he was again carried away by the winds above Ethiopia and thrown in unknown regions (II iii 4)

306 SOCIAL AND LUPAL PRONOUS OF NORTHERN INDIA

It appears that a voyage between India and Egypt was
a risky affaii and very rarely undertaken
In Straho's diy Rome had explored the
world of Arabian and Indian commerce

world of Arabian and Indian commerce "The entrance of a Roman army into Arabia Felix under the command of my friend and companion Aelius Gallus and the traffic of the Alexandrian merchants whose vessels pass up the Nile and the Arabian Gulf to India have rendered us much better acquainted with these countries than our predecessors were I found that about 120 ships sail from Myos Hormos to India, although in the time of the Ptolemies scarcely any one would venture on this voyage and the commerce with the Indies ' The route of the Alexandrian commerce in his day is ilso given "It (merchandise) is brought down from Arabia and India to Myos Hormos, it is then conveyed on camels to Coptus of the Thebais, on a capal of the Nile and to Alexandria" ıv 24) Combining the testimony of Strabo and the Periplus the

Indo Egyptian route appears to he from Indo-Egypt an routes Alexandria along the Nile up to Coptus, thence hy camel to Myos Hormos, the cluster of Islands now Jifatin From Myos Hormos or Berenice the ships sailed down the Red Sca to Mouza and thence to the watering place of Okelis at the Straits They made a coastal voyage as far as Cana leaving behind Eudaimon or Aden From Cana some ships sailed to Barbaricum or to Barygaza, sometimes halting at the island of Dioscorida or Socotra, others sailed direct for the ports of Limyrike (Malabar From Aromata or Cape Guardafui another route led straight to Malabar Pliny describes bow the Indian route was shortened by successive discoveries through the love of gain, so that "at the present day voyages are mide to India every year ' (VI 23) The last and the most important of the series was the discovery of the mouseon ascribed to Hippalus (Peri 57)

But he did a still greater thing, viz, freeing the Roman Empire from Arabian monopoly of the \rab Roman rivalry Eastern trade by tracing it to its source The commercial hand between India and Arabia which had lasted at least for 2,000 years and probably much longer was beginning to break under the impact of Rome With the conquest of Egypt and the establishment of the Axumite Kingdom, the Ptolemies systematically pursued the policy of cultivating direct communication with India and freeing Egypt from commercial dependence on Yemon There are significant facts bearing testimony to this change. The survival of Arabian control is noticed in the Roman know ledge of connamon bark as a product of Somulaland, au Arabian tributary But cinuamon leaf which was brought later into commerce was known (malabathrum, 56, 65) as an Indian and Tibetan product The 'small vessels' from Mouza to the Nabataean port (19) may be contrasted with the large vessels (10) that traded from Mosylhum to Egypt Yeinen was still wooed with gifts and embassies by Rome (23) but the policy of apprisement was soon abandoned was no part of the Airb policy, whether Homerite, Minneau or Nabataean to let Rome cultivate direct relations with India, and as the Empire expanded stronger measures were necessary Fifty years later than the Periplus, Traign had captured Petra, and Abyssinia was being subsidised to attack Yemen "1

Phny in whose time Indian Irade was at its highest incitions severil Indian imports very often stated with the price at which they were sold at Rome. These may be collected in the following list

'Thus completing her glory as being the great producer of the most costly gems ' (XXXVII 10) and being "of all countries the most prolific of tien" (XXXVII 13)

The list is not exhaustive In the Periplus the exports from Barbaricum-most of which found their way to Rome are costus, bdellium, lycium, nard, turquoise, lapis lazuli, seric skins, cotton cloth, silk yain and indigo (39) From Barygaza were sent across spikenard from the Ganges, costus, bdellium, wory, agate and carnelian, pebbles, lycium, cotton cloth of all kinds-the monakhe and the sagmatogene,

silk cloth, mallow cloth-a coarse fabric, yarn, long pepper "and such other things as are brought here from the various market towns" (19). Besides this there was the rich export trade of the Tamil ports (51 ff). Amongthe imports of Barbarieum were "a great deal of thin elothing, and a little spurious," figured linens (polymitá) of Egypt and Babylon, topaz of the Red In parts. Sea island from Egypt, the red eoral of the western Mediterranean-one of the principal assets o the Roman Empire in its eastern trade, storax, frankincease from Arabia, vessels of glass, silver and gold plate and a little wine. Into Barygaza were brought wine. Italian preferred, also Laodicean and Arabian; copper, tin and lead-largely for Saka coinage; coral and topaz; this clothing and inferior sorts of all kinds; bright-coloured girdles a cubit wide; 1 storax; sweet clover-used for making chaplets, perfumes and medicine; flint glass; realgar (sandarake); antimony; gold and silver coin, "on which there is a profit when exchanged for the money of the country "; " and continent, but not very costly and not much. And for the king there were brought into those places very costly vessels of silver, singing boys, beautiful maidens for the harem, fine wines, thin clothing of the finest weaves and the choicest ointments. Thus Indian imports consisted chiefly of tin, lead, glass, umber, steel. coral, coarse clothing, topaz and storax and frankincense

from Arabia while her exports were fron, skins, wheal, rice, hutter, oil; sugar, silk and muslin, wool and furs, wood, tortoise shell, pearls, large variety of drugs, dyes; aromatics;

Probably for the Bhils who worked the cornelism mines then as now Schoff.

¹ Red sulphide of arsenic, used for medicine.

The profit on the exchange was due to the a specioticy of the Roman coinage to that of India, which latter was still crude, of base metal ibronze or lead), for which even the bullion (copper, tin and lead) was imported. Schoff,

edible spices and precious stanes. The halance of trade was completely in India's favour. In vain Pliny raised his voice against the heavy exploitation of his country's wealth "At the very lowest computation, India, the Seres and the Arabian pennisula drained from our empire yearly 100 million sestences," so dearly we pay for nur luxury and our women (XII 18)

To make a brief resume of the history of the Indo-Roman trade Prior to Emperor Augustus The trade curve the western trade was carried on mainly by way of Egypt through the ports of Berepica and Myos Hormos to Alexandria The bulk of this trade took the The trade was at its highest between Augustus and Nero in the first century AD -stimulated by the discovery of the monsoons Spices and perfumes, pearls and precious stones, silks and muslins were the favourite Indian wares in Roman market The chief of these exports were spices and precious stones as appears not only from Pliny but also from the discovery of Roman coins from the sources of supply of these commodities 1 Between Nero and Caracalla (217 A D) there was a lapse of luxuries there was a limited trade in necessaries such as cotton fabrics and the trade was mainly with the north where Roman coins of this period have been found 2. This decline coincides with a reaction in Rome to plebian habits against the luxury and dissipation of the higher classes,-the case for which Pliny advicated so strongly

The fact of the southern and eastern trade does not appear with so much glamour and detail.

The objectives of southern trade were the Tamil countries and Ceylon carried from Bhurukaccha and Sürpuaka in the west and from Tamarahpta

I I furvalent to £ 70 000

See Sewell Portan Corre I om I in JR A S , 1301 pp 501ff

and the ports of Bengal and Kalinga in the east. The exploration of the island of Ceylon and its conquest is ascribed to prince Vijaya from Bengal on the very day when Buddha attained niriana. In the Jatakas Ceylon is known as the naga island, i.e., the island inhabited by people called the nagas or dragons. It lay on the route from Bharnkaccha to the East Ind.es (III, 188). Mariners from Benares, plying down the Ganges, sail and touch at this island (thid). The Tamil countries were reached both by land and by sea) On the way from the northwest coast to the East Indies was Manimekhalā 2 the divine name of Tanul, famous in the north for its efficient shipping. In stories of shipwreck of northern voyagers, the divinity comes to rescue with magic ships of titanic size (8 usabha X 4 usabha × 20 yatthika) with three masts and bedeeked all over with sampline, gold and silver (IV 15ff, VI. 25). I'be tradition at least shows that the southerners were more expert sea-farers and their ships were more seaworthy and of larger size. The Periplus also testifies that the Colas and the Pandyas sent their wares to the Ganges in large ships called Colandia. Their ports were visited in turn by ships "from the north"-evidently from the Ganges and Bengal. From Tamil literary evidence (Paddinappalai, 1- 0) it appears that from the North were exported to the Cola market of Kaveripaddinam, horses,-sent from Sind and the Punjab, gotd and precious stones from the northern mountains, and coral from the eastern seas.

The main outlet of northern merchandise for the South

Bornal and Indonesia.

and the East was Tāmralipti (Tamluk).

Some of its wares were even shipped to
the West. "Through this place are brought mala-

I The story of the Ceyknese chromates is half mythic and half historical and the date is absolutely norchiable. All that we may conjecture is that it is a pre-Maniya enjected.

³ See Krishnaswami Aryangar . Manimekha'a in its Historical Setting

bathrum (from the eastern Humliyas), Gangetic spikenard (the true spikenard from the Himaliyas) and pearls, and mushins of the finest sorts, which are called Gangetic" (Peri 63) It was the nearest seaport for approaching Pegu, Malay, Sumatra, Java, Camhodia and even Cluna and Japan by sea In the Jatakas, Savannabhum-1 generic name for the East Indian islands, is the regular field of mercantile adventure. Unlike the traders of the Gulf of Cambay who dealt with the Western world, the manners of Andhra, Kalinga and Bengal did not rest with sending their cargo to the markets of Indonesia They made bold enough to embark across the seas and colonise on masse. Traces of their adventure survive in the remnants of Indian civilisation widely ecuttered over Burma, Milaya, Sumatia, Java and Cambodia-the farthest outpost of ancient Indiao culture The hytory of the e momentous incritime exploits-full of life and vigour, and eloquent of strong socioeconomic forces let loose in the mother country, is entirely a lost story-lost like the great sand buried cities of Khotan 3

In the third century before Christ, the Maurya Empire stands among an international family with Syria, Egypt, Cyrene, Macedonia and Epitus, cultivating diplomatic relations and sending misionaries to picach the gospel of Dhamma (R Es II, XIII) Centuries of international trade had huilt up the highway for this political and religious intercourse. The influx of foreigners in the metropolis was so great at the time of Megasthenes that the municipal board had to set apart a committee to take care of them. The generals in the company of the Mecedoman conqueror were struck by the dim of the great dockyards of the Punjab this industry and maintain a strong admirally employing its fleet both for naval and commercial purposes.

The Satavahanas who were in possession of the western ports of Bharukaccha and Sorpāraga and The Bätavahanas who equipped them with quadrangular rest houses (catusalavasadhapratisrayapradena, Nasik C I 10 1v) must have pursued a vigorous commercial policy The Kanheir Caves executed in their time contain sculptural representations of voyages through sea They maintained a regular service of pilotage in the rough waters of Cambay (Peri 44 46) The Periplus gives a passing glimpse into how great a part this commercial interest played in the affurs of state Sandares, who ruled over the pros perous trading communities of the western sea-board took possession of Kalliena (Kalyana) formerly belonging to the House of Sarganes the Elder (Satakarmi), subjected its trade to the severest restrictions, so that if Greek vessels entered its port even accidentally, they were seized and sent under escort to Barygaza-evidently the seat of paramount power (52) Presumably it was an attempt to divert the overseas trade of Kalyana and centralise it at Bharukaccha

The Andhras were veteran sen-farers pursuing their trade from the eastern coast. Even their coins belonging to the second and the third centuries AD bear the device of ships "full rigged for distant seas". The Colas, the Kalingas and the people of langa, Pundra and Samatata were their rivals in eastern trade. The kings of langa had powerful naval forces and are said in Kalidasa's Raghuvamsa to be trusting in their ships

Under Kaniska, when the Lusana and the Roman empires

The Kusana marched almost contiguous, Roman trade
was at its highest References to Romaka
in the Mahabharata and in the astronomical siddhantas
originate from this period Rome was alive to the import-

ance of Yuch-Chi alliance against the Parthians and Sassanians and as controller of the great overland trade-route through Afghanistan between the East and the West. "How close was the friendship is shown in AD. 60 by the Roman general Corbulo escorting the Hyrcanian ambassadors up the Indus and through the territories of the Rushans or Indo-Seythans on their return from their embassy to Rome"?

(Yet the sex was full of danger (samuddo anekadınavo) and it was love of gain that inspired man Perula of the sea to dely them In a mother's estimation as regards her son intent on a voyage, these risks far outweighed the expected returns (Jat IV 2) Shipwreck is a common entastrophe in the Jatakas (11 103; III 25; V. 75) The vagaries of the weather and of the waves were not sufficiently explored "Shipwreck is often due to planks giving way (Jat VI 31, bhinna-naukanivārnave, Mbh. VIII 2 20) eaused by entaracts or tidal hores or by running a hidden took or coming in the field of a magnetic rock," as for example the Mainak which carned a notoriety in the Epies for its heavy toll of merchant men. When dangers go out of control, men fall into myths Accordingly the sea, due to insufficient acquaintance, became associated with mythical horrors and for their counterpart, with mythical charms. At is infested with goblins and monsters and nagas devouring shipwreeked persons and it abounds with gold, diamond and neetor, the very ehxir of life (Jat II 127 ff , III 345; IV 139 ff ; Mbh I 20-22)

¹ R K Mukberp, op est , p 139.

This possibly is the reason why case fibres instead of iron strips were used to join the planks. An IV, 127 Hare renders veitabundhanabaddhaya 'as 'rigged with masts and stays' The explanation of Buddhagess does not allow this rendering

Even in the days of the Arthasastra ocean traffic was far more dangerous than land traffic (II 16 and Cambay and Com) And these dangers were not all imaginary. The Periplus gives a realistic insight into them. The gulfs of Cutch and Cambay were great danger zones. "Those who are diawn into the Gulf of Baraka (Dwaraka) are lost; for the waves are liigh and very violent, and the sea is tumultinous and foul, and has eddics and rushing whirlpools. The bottom is in some places abrupt, and in others rocky and sharp, so that the anchors lying there are parted, some being quickly cut off, and others chafing on the bottom." (40)

A glummering glump-e is obtained why the ancient seaport of Roruva goes out of the picture and Barbarieum, farther west and north, comes as a parvenu

Due to the extreme intensity of ebb and flow in the Narmada, entrance and exit of vessels in Bharukaccha were very dangerous to the mexperienced The Periplus vividly describes the vagaries of the tidal bore (45 f) Because of the difficulty of navigating in the Gulf of Cambay and the mouth of Narmada, the state maintained a regular service of pilotage, under which incoming vessels were met at Teast 100 miles down from the port "Native fishermen in the king's service, stationed at the very entrance in well-manned large boats. . . go up the coast as far as Syrastrene. from which they pilot vessels to Barygaza And they steer them straight from the mouth of the Bay between the shoals with their crews, and they tow them to fixed stations. going up with the beginning of flood, and lying through the ehb at anchorages and in basins. These basins are deeper places as far as Barygaza, which lies by the river about 300 stadia up from the mouth" (44)

The coastal route of Anabia was discarded as unsafe (20) The story of Posidomos repeated by Strabo is another concrete instance of the perilous nature of a long sea voyage Not all the perils came from nature The arch-peril

of maintime commerce was piracy. The

myths of man-eating sen-monsters in the

Jatakas may be traced to this source For the name of naga applies to both a pirate and a mouster According to the Kashmirian poet K-emendra, these naga pirates were active in the Eastern waters in the days of Asoka Traders waited upon the Emperor and complained that all their ships and treasures were plundered by these people and that if the conditions rau as they were, they would change their pursuits resulting in fall of revenue (Bodh Kalp, Pall 73)

The worst piratical rendezvous in the

Konkan coast Indian ocean was the Konkan coast, entrenched in its numerous creeks and bays which afforded safe harbourage to their cruisers. They fed upon the richly freighted merchantmen that frequented this place According to Ptolemy the Pirate Coast extended from the neighbourhood of Simylla (Chrul, 23 mi S of Bombay) to Nitra (Mangalor) (1 7) The Periplus (53) and Pliny refer to the pirates who infested this place and the latter adds that merchant vessels from Egyptian ports carried as a precaution companies of archers on board In Ptolemy s time these pirates felt the strong hand of the state. The father of the Red Chera destroyed "Kadamhu of the sea coast" and thus the coast was freed from their depredations between 80 and 222 A D But Arab Berber predators still dominated African and Arabian coasts, " men of piratical habits, very great in stature and under separate chiefs for each place" (Pcri. 16, 20) Such was the nursance and havor they created, that the author of the Artbasastra bas to enjoin that mrate ships (himsrika) are to be destroyed at sight (II 28)

So the vision dawns before our eyes of ancient Indian

The wige for gain mariners even from the Vedic times braving unknown perils across fathomless depths and under limitless skies. The Indian teak excavated at Ur

in Sumer, the Indian frescoes worked at Borobudur in Java, the Indian inscription at the Horney temple in Japan give an inkling of the magnitude and duration of their exploits 1 As the roads, between Puskalavati and Tamrahoti hummed with cracking wheels, the roaring waves of the Indian ocean were broken by the rythmic splashes of oars, the very emblems of patient and persevering search for gain gingered up by an unconquerable spirit of adventure. We feel our solourn in a world of reality, a material world of the stock and the bourse where artha fulfils its great destiny in human life-where empires come to measure arms to seeure com mercial advantage, where overseas trade paves the path for conquests of Dhamma and conquests of arms, where the merchant, the missionary and the military march one after another in an automatic cycle, - all originating from the much derided mercantile gospel 'yathurtham labhate dhanam '- profit according to investment '

¹ Compare the present deterioration in Indian shipping The share of Indian companies is 13 p c of coastal traffic and 3 p c of ceram borne trade of India while formerly, both were entirely Indian

CHAPTER VI

STATIL LEVIES AND STATE CONTROL ON COMMERCIA

As trade and commerce expanded and became the strongmeterication of State est economic factor in urban life it called
forth in an increasing measure the intervention of the state. Its first concern was of course to derive
a revenue from the new income, its next, to monopolise
those trades and industries which yielded best profits or
which affected vital interests of state. The exercise of these
very rights drew it into further and further interference.
The evils of competition, unfair dealings, deception of
customers, smuggling and deleterious machinations of big
business all combined to intensity the anarchy in the commercial world. The state was faced with the growing
problems of restoring order. I or on the stability of the
market depended the stability of its finance.)

Assessment of commercial wealth was run on the same lines as assessment of agricultural produce

Revenue from the lines as assessment of agricultural produce

It was the same priociples of faxation applied to the different taritas. The

same social contract of protection and payment hetween the sovereign and the subjects is the theoretical hasis of both the systems The same moderation in assessment and realisation of revenue is the prescribed canon in both The state had its own commercial concerns as it had its agricultural land and eattle Toll dues were occasionally remitted and sometimes transferred as in the case of land revenue Lastly the doctrine of emergency was a convenient tool in the hand of the state for the best use and worst ahuse

As the bhaga was the customers revenue on land, the The fulka for pro for the protection it received from the state (Mbb XII 71 10) 1 Among the vauntings of a king how he stands above his kin is "You know Uposatha, mereliants coming from many a realm prosper here and I look to their welfare and protection "

> atho pi vanua phita nanaratthato agata tese me vihit i rakkā evam innaba Uposatha'ti Jat 1V 135

In a kingless country, merebants from afar with a varied cargo cannot safely cross the roads

> na arajake janapade vanijo düragaminah gacebanti ksemamaddbyanam bahupanyasamacitah Ram II 67 11

From Narada's admonition to Yudhisthira it would seem that the king was not orly to treat merchants with consideration in his capital and kingdom but also see that huvers or his officers in the zeal to encourage import did not tempt merchants with high hopes or false pretexts to bring their goods (Mbh II 5 115)

In the Rg veda sulks means price. Muir traces the sense of tax in a passage in the Atharva Veda, III 23 3 See Macdonell & Keith Vedic Index Vol II. p 387

Protection and encouragement of commerce meant that taxation did not fall heavy on dealings Moderation of exchange Moderation is the keynote of Indiao financial speculation, "Let him not cut up his owo root (by levying no taxes) nor the root of other (men) by excessive greed, for by cutting up his own root (or theirs) be makes himself or them wretebed VII 139) "Let him also by just duties on other marketable goods according to their intrinsic value without oppression the traders (acupabaty 1, Bandh I 10 18 15) An admonition in the Jataka elaborated in the commentary shows bow the king's exchequer fails as a result of excessive taxation of citizens engaged to buying and selling transactions (y yutta kayavikkaye V 243) warns Yudhistbira that it should be his anxious care to see that only such dues as prescribed in the canon (vathoktam) and no arbitrary imports are realised from the merchants who come to his territories from distant lands impelled by the desire of gun (Vibh 11 5 114)

Moderation sometimes urged reduction or remision of talks and duties The birth Reluction and Reof no heir to the throne was a suitable m ss on oceasion for such a gesture. On the occasion of Mahavira's birth prioce Siddhartha released customs, taxes, confiscations and fines (Jama Kalpasutra, 102) Rare products useful for the interests of state might be freed from duties to eocourage their import. Losmas writes from the sixth century that the king of Sielediba (?) imported his horses from Persia and the traders supplying were exempt from customs dues Toll receipts might be Ass gament of toll transferred like any other revenue Ling might make a bequest of them to whoever might please his faocy (Jat VI 347) 1 Or

¹ The Inscription of Diavals of Hast kund at B japur assons 3 of the toll proceeds to Juna and 3 to a temple gu w Verse 17

sometimes the king might choose to pay his officers by the assignment of the receipts as would appear from Nārada's speech (vathoktam avahāryanti kulkam kulkopajīvibhih).

An enlightened commercial policy did not stop at moderate assessment and remission. It Subsidy and loan sometimes encouraged trade and industry by direct subsidy.) The state gave not only civil but also economic protection. Pursuant to the financial maxim that mitigation of want will increase revenue, a chaplain advises a king whose realm is harassed and harried by dacoits that taxation or punishment are not the right redress. "Whoever there be in the king's realm who devote themselves to cattle and the farm, to them let his Majesty give food and seed-corn. Whoever there be in the king's realm who devote themselves to trade, to them let his Majesty give capital. Whosoever there be in the king's realm who devote themselves to Government service (raja-porise) to them let his Majesty give wages and food " (Dn. V. II). Peace and order depended on the prosperity and satisfaction of subjects all around and the lesson is constantly harped upon to bring round errant kings. Narada's admonition to Yudhişthira suggests the subsidisation of merchants and craftsmen as a healthy state policy (Mbh. II, 5, 71). King Siddhartha's concessions to his subjects on the occasion of Mahavira's birth included caucellation of debts implying the same benevolent practice of advancing loans to agriculture and business.

A city officer fixes the toll for merchants (vāṇijānam sumkāni, Jāt. IV. 132). As regards the Realisation of tell rates no evidence is forthcoming. (The dues : smuggling. tolls were collected on incoming goods at the four gates of the city (catusu dvaresn sumkam, VI, 347) (at the customs house (sumkatthana, Vin. III. 4; Mil. 359)1

¹ Cf. the mandapild or customs house in later inscriptions like the Orant of Sivaskandavarman and the Baimath Prassata.

attached to each gate. Collection was strict and for an attempted evasion the whole wagon was seized by the government. This is elaborated in the commentary on Buddha's parable in the Angultara nikāja of 'the payer of taxes on meichandise' (sumkadayikam eva bhandasmim, I. 53) "Just as one hable to pay duties on goods he has bought and 'smuggled through the customs' is overwhelmed by his guilty act, and it is he who is the guilty one not the Government, not the Government officials He who smuggles goods through the Customs House is seized, cart and all, and shown to Government. "L'

The most lucrative industries, those which commanded the best market abroad or those which involved the vital

interests of the state, were kept under its State monopolies monopoly Medhatithi illustrates Manu VIII 399 by citing saffron in Kashmir, fine cloth and wool in the East, horses in the West; precious stones and pearls in the South, and elephants everywhere We have already seen that horses and elephants, particularly the latter, were very often royal preserves. 1 As for pearls the Periplus says that the fishery at Colchi was worked by condemned criminals and regarding Argaru "at this place and nowhere else are brought the pearls gathered on the coast thereabouts " 2 In the Santiparva (69 29), the Arthusastra (II, 12) and the Karle and Nasik Inscriptions mines and salt centres appear as state monopolies According to Pluny, from the salt-range of Ormenus between the Indus and the Hydaspes, "a greater revenue accrues to the sovereign of the country than they derive from gold and pearls" (XXXI 7)3 The mines and fisheries were profitably worked by the state by means of free convict labour. Sometimes the state extended its

¹ See Bk I Ch V

⁷ Cf E I , II 13-Asgput Stone Inscription

³ Reminiscences of such monopoles are observed in the royal monopoles in manufacture or sale of salt, auger, tobacco matches, etc., in many of the Indian Native States

control over the whole foreign trade and strictly regulated the distribution of imports as for example

State control under the Sakas. the Southams of the west in the first century A.D. "The sbips he at anchor

at Barbaricum but all their eargoes are carried up to the metropolis by the river to the king " (Peri. 39). Sandares (?) who conquered Kalyāna subjected its trade to severe restrictions and diverted the Greek trade to Bhārnkaccha, his chief trade mart (52).

The Sakas not only controlled the overseas trade. They gave it necessary protection. They made Bhārukaccba a safe barbour against the extreme vagaries of the tidal bore at the estuary of the Narmadā by engaging native fishermen "in well-manued large boats" to steer safely the incoming vessels (Peri. 44-46). The kings had to protect overseas trade against the depredations of pirates a function which the father of the renowed Red Chera so eminently fulfilled by subduing the Kadambas in the Konkan coast. Asoka could not brush aside the complaints of the eastern traders suffering under the marauding activities of the Nagas, although his methods of redress were different.

In the empire of Candragupta, trade both internal and external, received the vigilant attention of the state and of the municipalities. Witbout going into details, Megasthenes gives a very precise information on the nature of municipal control. "Of the great officers of state, some have charge of the market......" and then of the municipal bodies in Palibothra, ".....The members of the first look after everything relating to the industrial arts." The second attend to foreigners, the third register births and deaths "with the view not only of levying a tax," but also in order that births and deaths among both high and low may not escape the cognizance of government. The fourth class superintends trade and

Thus false weights and measures were reduced, adulteration checked, prices kept in eqilibrium, the underhand machinations of the black market brought under control, smuggling and evasion in king's dues' dealt severely. The control was no doubt rigornus and diastic; but nothing short of extreme measures could resolve the prevailing anarchy in the business world.

The Arthasastra and the Dharmasastras dilate further the principles and rates of assessment. The sastra data hy themselves cannot be accepted as authoritative evidences in actual economic conditions. But they reflect the progress of financial thinking and the grawing complexities and recurring crises in the market which kings were called upon to deal and oo which law-givers had the firmulate their views.

"After (due) consideration the king shall always fix in his realm the duties and taxes in such a manner that both

he himself and the man who does the work receive their

1 The 'tithe' is not to be taken literally but in the more clastic sense in which it

due reward " (Manu, VII. 128). The Sukraniti enjoins that a duty is levied only when the buyer or seller is a gainer (IV. ii. 218 f.). "Having well considered (the rates of) purchase and (of) sale, (the length of) the road, (the expense for) food and condiments, the charges of securing the goods, let the king make traders pay duty."

Vıkrayam krayam adhvānam bhaktam ca saparicchadam Yogakşemam ca samprekşya vanıjām kārayet karāņ

Manu, VII. 127; Mbh. XII. 87. 13.

The tax on internal industries, the Sāntiparva continues, is fixed after taking into account the outturn, receipts and expenditures and the state of the arts—atpattim dānavṛttim ca silpam samprekṣya cāṣakṛt.

In the Arthasastra the sannidhātī realises commercial dues as the samāhatī collects agricultural dues. This officer is to observe the fluctuations in demand and

The sommitted in the prices of internal products and foreign imports so that the scale of duties might he revised periodically. Import of foreign goods is to be encouraged. Foreign merchants coming by water or by land are to be favoured with remission of taxes so that they may keep some margin. (Parabhūmijam panyam anugrahenā' vahayet. Nāvika-sārthavāhebhyaśca paribūram āyatıkşamam dadyāt). They cannot be sued for debts (II. 16)

These are concessions under special circumstances. The payments that a visiting merchant habitually makes are:

- 1. Sulka-toll or customs dues,
- Vartanī—road cess.
- 3. Ativāhaka-conveyance cess,
- Gulmadeya—levies at military stations, presumably for protection agaist hrigandage,
- 5. Taradeya-ferry charges.

- SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA
 - Bhakta-subsistence to the merchant and his followers.
 - Bhaga-share of profit.

-II, 16, 35

of value.

The toll covers both ingress and egress (niskramyam pravesyam ca sulkam) of merchandise-ex-Toll rates. ternal (bahyam, i.e., arriving from country parts), internal (abhyantaram) or foreign (atitbyam). scheduled rates of import duty are:

- 1/5 of value. Common goods 1.
- 2. Flower, fruit, vegetables, roots, bulbs, pallikua (?), seed, dried fish and dried
- meat 1/6 3. Conch-shells, diamonds, jewels, pearls, to be fixed by corals and necklaces experts acquainted with time, cost and finish.
- Fibrous garments (ksauma), cotton 4. cloths (dukula), silk (krimitana), mail armour (kankata), sulphuret of arsenic (haritāla), red arsenic (manaśśilā), vermilion (hinguluka), metals (loha), colouring ingredients (varnadhātu). sandal, aloe (agaru), pungents (katuka) ferments (kinva), dress (āvarana). wine, ivory, skins (ajina), raw materials for kṣauma & dukula, carpets (āstarana), curtains (prāvaraņa), products yielded by worms (Lrimijata) and 1/10 to 1/15 wool of goat and ship
 - Cloths (vastra), quadrupeds, bipeds õ. threads, cotton, scents, medicines. wood, bamboo, fibres (valkala), raw

hides (carma), clay pots, grains, oil (sneba), soda (ksāra), salt, liquor 1/20 to 1/25 of value. (madva), cooked rice

The rate of 1/6 for group 2 is repeated in the Agnipurana and in the Smrtis (Gaut. X. 27; Manu, VII. 130-32; Vis. III. 24f.) 1 with further additions in the list. viz., medicinal herbs, boney, grass, firewood, scents, spices, leaves, skins, wickerwork, stonework clarified butter, ctc. On cattle (pasu), the import duty is not 1/-0 or 1/25 but 1/50 and so also on gold (hiranya).2 Import of gold is encouraged for obvious reasons. The standard rate on imports as well as on all sales is also much lower than 1/5. The king is to take 1/20 of the profits upon the value fixed on each saleable commodity by experts in the settlement of tolls and duties and of prices (Manu. VIII. 398; Gaut. X. 26). This of course excepting grain and applies to both Vaisyas and Sūdras (Manu, X. 120).3 The Sukraniti gives another alashadas

Minerals:	Gold, gems, gla	ass and lead		1/2 of profit

Clearly the author of the Arthasastra, an economist statesman, is a much more rigorous protectionist than the

¹ Haradatta reads the passage in Oautama and Vispu as indicating 1/60 which

² According to the Agaipurage 1/5 or 1/6. For the mesning of 'hirapya' see supra. p. 131.

³ This according to the rendering of Näräyspa and Nandana. Medhatithi, Govindara, a. Kutlüks and Raghavananda give a different interpretation, viz -on the profits of gold and cittle the king may take in necessity 1/20 instead of 1/50 if the commodity values more than I Adriagana. The former is more acceptable for X. 120 and VIII. 398 both refer to all commodities except grain while VII. 139 to cattle and gold only.

law givers of the canon It should be observed moreover that while the assessments of the former are made on value, those of the latter are charged on profit which falls much highter on the traders

According to Visuu the import duty is generally fixed at 10 pc (III 29, Baudh I 10 18 14) and the export duty at 5 pc of the price of the articles (III 30). The rate of duty reflects the high rate of profit derived by traders.

Within the sulka the Arthasastra includes another charge, viz, the gate dues (dvaradeya) which are 1/5 of toll and which may be remitted if circumstances necessitate such favour (dvaradeyam sulkapancabhaga anugrahikam va yathadesopak iram sthapayei) Commodities shall never be sold where they are produced (II 22) 1

The variant is realised by the antapala or boundary officer. He is a police officer giving protection to caravans at the danger zones of the borders. Kautilya's teacher is very sceptic of the

1 From much later inscriptions come toll lists existing in practice and not in ideas alone

 1 manaka for each drong of wheat many bariey, saft tale and such
 other mess rable checks
- -B: spor inscription of Dhavala of Hastik ndi, vv 8 16 940 A D But the list is of little use w thout the knowledge of the come and measures

veracity of this incumbent: he kills traffic by allowing thieves and taking taxes more than due. His illustrious student however holds that the officer encourages traffic hy welcoming import (VIII. 4). But the suspiciou is lurking: for he is to make good whatever is lost or stolen from merchants within his jurisdiction. A road cess also exists in the fiscal conception of the Sukranīti although it goes under the general name of sulka (IV. 11. 213)1; but it is more strictly a road cess as opposed to a police tax. "For the preservation and repair of roads, he should have dues from those who use the streets " (258).

"After carefully examining foreign commodities as to their superior or inferior quality and Realisation stamping them with his seal, he (the antupāla) shall send the same to the Superintendent of Tolls" (vaidesyam särtham krtasäraphalgubhändavicayanam-abhijñānam mudrām ca datvā preśayedadbyaksasya). At the toll-gate of the city, the merchants have to give their whereabouts, amount of cargo, etc. Twice the toll has to be paid for no seal, 8 times for counterfeit seal. For falsifying the name of merchandise (namakrte) 11 panas have to be paid for each load (sapādapauikam vahanam dāpayet). Attempts at smuggling and escape of toll dues are met with heavy fines In case of bidding the enhanced price goes to the treasury along with the toll (II. 20).

Hence commodities for sale shall not be let off without being weighed, measured or numbered (dhrto, mito, ganito vā). Import of weapons (śastra), armours (varma), kavaca, loha, ratha, ratna, dhānya, and paśu 2 is forbidden and leads to forfeiture of merchandise (sbid).

^{1 &}quot;The fulla is levied on goods in market place, streets and mines."

The ban on the import of armsments and accontrements is intelligible but not so on loha, raina, dhanya and pasu. The first two of these even occur in the customs schedule of II 23

The injunction of Manu, Visnu and Ynjūavalkya against smuggling is identical. "He who tries to avoid the toll by buying or selling at improper time (i.e., at night, etc.) or by falsely enumerating his goods shall be fined eight times the amount of duty "(Manu, VIII 400) According to Visnu the evader shall lose all his goods (III 31) The king is to confiscate the whole property of a trader who exports goods of which the king has a monopoly or the export of which is forbidden (399, Vis V 130, Yaj II 261). The law of forfeiture thus applies to the entrance of goods laid under a ban as well as to the exit of goods under an embargo

The Arthasastra lays down that the toll of inferior commodities shall be fixed and exemptions considered by experts (II 20) Minu lets off small deilers with some

trifle to be paid annually as tax (VII 137)

The scale of pranaya or benevulence levied to replenish

a depleted treasury by king's officers

is 1/6 of cotton, lac, flax, barks, wool
(rauma), silk (kauścya), medicines (? kausaya), flowers,
fruits, vegetables, fitewood, hamboo, flesh and dried flesh
(vallura), ł of ivory and skin (dantajina) A license has to
be obtained for sale of these articles Internal dealers pay a
fixed tax at the following rate

In gold silver, diamond prectons stones pearls corals, horses, elephanta 50 karas In cotton threads, clothes, copper, brass bronze, perinmes, medicines 1 quor 40 karas In grams liquids (rasa) metals (loba), carts (éalata) 30 karas In glass and skilled artisans (mahākarayah) 20 Laras Inferior artisana and animal reprets (? vardbakipowakah) IO Lares In firewood bamboos, atones carthen pots cooked rive (pakkanna), vegetsbles (haritapanyah) 5 Jaras Dramat ets and prostitutes (kuśilaya rupanyaśca) their wages

Forced labour was another item which fell on all occupations. "Mechanics and artisans. Ratakariya. as wellas Sūdras who subsist by manual labour, he (the king) may cause to work (for himself) one (day) in each mouth " (Mann, VII. 138; Gaut. X. 31; Vāś. XIX. 28; Vis. III. 32). The merchants may obtain commutation of rajakariya by selling one article every month to the king at discount rate (arghapacayena, Gaut. X. 351

(Foreign ships touching at a port has to pay port dues to the navadhuaksa, an officer resembling the Port dues. port commissioner of our times. Duties are remitted for cargo spoilt by water 10 a sea-beaten boat

(Arth. JI, 28).

(The state monopolies according to the Arthasastra are mines, salt centres and probably Monopolies. shipping. Mines involving small capital outlay are worked by the government itself. Otherwise these are leased out for a fixed share of the ontput or for a fixed rent (II. 12). The state also runs large industries like weaving mills under its own capital and management.

Since toll rates are fixed on the estimated value or profit of merchandise, prices bave necessarily Price-fixing. to be fixed. And fixed price requires fixed weights and measures. Hence, "let (the king) fix (the rates for) the purchase and sale of all marketable goods, having (duly) considered whence they come, whither they go, how long they have been kept, the (probable) profit and the probable outlay. Once in 5 nights, or at the close of each fortnight, let the king publicly settle the prices for the (merchant). All weights and measures must be duly marked and once in six months let him re-examine them " (Manu, VIII. 401-03). The interval depends on the variability in price of goods.

Authorised persons alone shall collect as middlemen grains and other merchandise. Otherwise Control of buying and selling they will be confiscated by the Superintendent of Commerce (dhanyapanyanicavāmscānuinātah kurvuh; anvathā nicitamesām panyādhyakşo grhnīyāt, Arth. IV. 2). This seems to he to eliminate competition, speculation and hoarding. Again, " whenever there is an excessive supply of merchandise, the Superintendent shall centralise its sale and prohibit the sale of similar merchandisc elsewhere before the centralised supply is disposed of. Favourably disposed towards the people, shall merchants sell this centralised supply for daily wages,"--(panyahāhulyāt panyādhyaksah sarvapanyānyekamukhāni vikrīnīta Tesvavikritesu nanye vikriniran. Tāni divasavetanena vikrīnīran anugrahena prajānām. Ibid). This means a warehouse and clearance sale under state control and if customers competent to pay are not

This is how the law-giver and the economist met new contingencies. The derivation of a revenue from the new income was their primary

forthcoming, the goods may be disposed of for hodily

lahour.

concern hut this required order in business. From fixation of the toll they are led to fixation of prices, of weights and measures. With increasing facilities given for protection, charges multiply. With the increasing complexities of the market, the state comes to grip with new problems. It must liquidate speculation and hoarding, break monopolies and corners, dissolve glut and scarcity and maintain the equipoise between dealers and customers. It must in short inaugurate a regulated instead of a free market. Indian economic theory thus parts company with Adam Smith and Turgot and falls in line with the rigorous totalitarianism of Friedrich List.

-Nasik Cave Inscription

Success! In the year 42, in the month of Vesākha, Usavadāta, son of Dīnīka, son-in-law of king Nahapāna, the Ksaharāta Kṣatrapa, has bestowed this cave on the Samgha generally; he has also given a perpetual endowment, three thousand—3000 kāhāpanas, which, for the members of the Samgha of any sect and any origin dwelling in this cave, will serve as cloth money and money for outside life; and those kāhāpanas have been invested in guilds dwelling in Govadhana,—2000 in a weavers' guild, interest one pratika (monthly) for the hundred, (and) 1000 in another weavers' guild, interest three quarters of a pratika (monthly) for the hundred; and those kāhāpaṇas are not to be repaid, their interest only to be enjoyed. Out of them, the two

thousand—2000— at one pratika per cent. are the cloth money; out of them to every one of the twenty monks who keep the vassa in my cave, a cloth money of 12 (kāhāpaṇas). As to the thousand which have been invested at an interest of three quarters of a pratika per cent. out of them the money for kuśaṇa.....and all this has been proclaimed (and) registered at the town's hall, at the record office according to enstow.

Again the donation previously made by the same in the year 41, on the fifteenth of the bright half of Kārtika, has in the year 45, on the fifteenth......been settled on the venerable gods and Brāhmanas, viz., seventy thousand—70,000—kārsāpanas, each thirty-five making a suvarņa, a capital (therefore) of two thousand suvarņas. (This is registered) at the record office according to custom.

CHAPTER I

MONEY-LENDING AND CREDIT

Productive industries and unproductive bus pess. From money to money lending Business loan Fam ne loan Instruments of credit pledge, surety Boid of debt acou trance. Rate of interest, discriminating a d differential rates accumulation forfesture and morator um. Hillegal r tea condemnation of usury. Inheritance of debt and credit Repud ation and debt aut Sirvice and stayery for default Forcible realisation Punishment for unpaid debt Insolvency The debtor's tig lq

Trade, the third of the tattas was followed by the fourth, viz . usury With the growth of Unproductive busi trade.-the primitive agricultural and neas. pastoral economy, inclusive, of course of small cottage industries, is modified under the stress of currency and credit. Money introduces itself as a new factor in the market, increasingly asserting its place in exchange, and fostering under its protective wings the speculative trader Beside agriculture and cattle rearing and other productive industries appears the art of making money simply by clever buying and selling or by lending one's hoarded wealth to others at interest. This means a partial breakdown of the self-sufficient agricultural cumindustrial village and accentuation of economic disparity between the classes.

Transactions of credit were fairly established by the post Vedic times when 'business' was well Bust esa loan on foot These did not begin with money The owner of the land and merchandisc might hire them out to enterprising people for a share of profit (Jat. VI 69. 1V 256, V 436) There is the oft-quoted simile that a man sets up a business contracting a loan (main adaya, 43~1365D

com: 'taking goods on interest'), that his husiness succeeds so that he is not only able to pay off the old debt he had incurred but there is a surplus over to maintain a wife (Dn. II. 69; Mn. 39). In a more elaborate parable wealthy gahapatis and their sons seeing a shop-keeper shrewd, clever and resourceful, competent to support his sons and wife and from time to time to pay interest to money loaned, offers him wealth saying: "master shop-keeper, take this money and trade with it, support your sons and wife, and pay us hack from time to time."

gabapatī vā gabapatīputtā vā addhā mahaddhənā mahābhogā te nam evam jānanti—ayam kho bhavam pāpaniko cakhhumā ca vidbūro ca patībalo puttadārañ ca posetum amhākañ ca kālena kālam anuppadātun ti. Te nam bhogehi nimantanti—ito samma pāpanīka bhoge karitvā puttadarañ ca posehi amhākañ ca kālena kālam anuppadehī ti. An. I. 177.

In the Arthaéāstra, interest on stock, *te*, loan invested for business (praksepa) is fixed at one-half of profit, payable every year, and accumulable up to a sum twice the principal (mūlyadvigunab) (III. 11). According to the Santiparva the share for capital is as high as 6/7 (85-7 p.c.) and even 15/16 (93-75 p.c.) of the profit (60.25). The rule however seems to apply only between a capitalist employer and hired hawker contracted on a profit-sharing basis.

Business apart, there were of course cases of borrowing and lending in cash and kind to be repaid with interest. Agricultural loan was an early practice of enlightened statesmanship and in famine doles were given to the indigent gratuitously or on terms of repayment at harvest.

Debts night he secured or unsecured. The creditor might demand a surety for payment or a surety for appearance. For clearance of unpaid deht the heir of the former was liable, not of the latter (Manu, VIII. 159 f.; Viș. VI, 41;

Vr XI. 41) Big commercial deals were made on credit on the security of a signet ring (Jat I. 121). The debtoa's daughter might be taken as slave to secure against accumulated interest (No 436). The pledgee of course did not acquire proprietory right on the pledge (adhi) which was ruled by the laws of deposit. It was to be reconveyed when the debt was paid up (Arth III 12, Yaj II 58 f.) unless it was lost without the fault of the holder (Gaut XII 42). A productive pledge (i.e., usufructuary mortgage) is never lost to the debtor even in case of default (Arth III 12, Yaj II 58 f., Manu, VIII 143, Vis VI 5) and it cannot be given away or sold under any circumstances.

There was considerable use of the instruments of credit Merchants sometimes transacted between themselves on credit without any security "Many traders borrowed moncy from him (Anathapindika) on their Bond of debt bonds-to the amount of 18 erores, and the great merchant never called the money in " (halid voharūpajivino pi ssa hattliito panne aropetvā attharasakotisamkham dhanam inam ganbimsu, Jit I 227) But all loans secured or unsecured had to be confirmed by means of a written bond or agreement of debt (karana Manu, VIII 154 coms . Vr VIII 11. mapannam) which the creditor (ināyika) had to present to the debtor when asking for any payment (Jat IV 262) The city god of Savatthi instructs a fairy to realise Anath pindika shad debt in the following "Take the semblance of his agent mannei repair

I Governing a pelge and the two parties in it the Arthasastra lays down In the absence of the creditor or mediator the amount of the debt may be kept in the custody of the ellers of the village and the debter may have the pledged property redected or with its value fixed at the time and with no interest chargeshole for the future the pledge may be left where it is. When there is any rise in the value of the pledges or when it is apprehended that it may be depreciated or lost in the near future the pedge may with permission from the judges (dhar naithful) or on the civilence furcished by the officer in-charges of pledges sell the pledge of the in the presence of the debta or in over the press diety of expects who can see whether such apprehension is matched (III 12).

to their houses with the bonds in one hand and pens in the other and say,—"Here is the acknowledgment of your debt—pay up the gold kahapanas you owe"

tvam tassa nyuttakavesum gahetva ekena hatthena pannam ekena lekhanim guhetva tesam geham gantva idam tumhakam in pannam tumhehi gahitakahapanani dethi (Jat. I. 230)

For every payment the creditor must always give the debtor a receipt and an acquittance on clearance. Otherwise he must pay interest to the debtor as he had obtained previously (Nar I 114 f. Vr XI 66)

The just and normal rate of interest is laid down by lawgivers 3, 12 per cent per month or 15
p c per annum (Manu VIII 240, Vås
II 51, Baudh I. 5 10 22, Nar I 99, Vr XI 3,
Arth III 11) In Gautama the rate is 5 mass a month
for 20 kārsapanas (XII 29) If the ratio as laid down by
commentator Haradatta, viz, 1 karsapana=20 māsas is
accepted then the rate works out perfectly to 15 p c per
annum But on the basis of Manu's equivalence, 1e,
1 karsāpana=16 masas (VIII 134-36) the rate is
18 75 p c per annum Persumahly the rate is higher in
the earlier Sūtra work and Haradatta, 2 very late commentator modified the scale of equivalence only to adjust the Sutra

According to the commentators Narāyana, Rāghavananda and Nandana and according to Yajūavalkya (Il 37) the rate of 15 p c is for debt secured by a pledge For unsecured loans the rates are 2, 3, 4 or 5 in 100 according to the varias

rate to the more common rate of the later Smrtis

re for Brahmana debter 24 p c per annum
, hyatriya , 36 ,
, Vuisya , 48 ,
, Sudta , 60 ,

-Manu VIII 141f, Vis VI 7, Nar I 100

Differential customary rates are given also in the Arthaśāstra, but not on the basis of caste discriminations. Apart from the just rate (dharmyā) of 1½ p. c. per month, these are 5, 10 and 20 respectively:

Special forms of interest are compound interest (cakravrddhi)'; periodical interest (kālavrddhi) in which the interest is to be paid with the principal within a fixed period'; stipulated interest (kārita), i.e., exceeding legal rate; corporal interest (kārylka) which is payable with bodily labour either of the debtor or of a pledged animal or slave; adaily interest (śikhāvrddhi) and the use of a pledge (bhogalābha) when no interest is claimed (Gaut. XII. 34 f.; Manu, VIII. 153; Nār. I. 102-4; Vr. XI. 4-11).

Interest can accumulate only up to a sum equal to the principal, after which it ceases (Gaut. XII. 30 f.; Arth. III. 11). But usury was growing ahead, and later law-givers have to adjust their rules accordingly. Manu has: 'Interest payable with the principal shall never exceed the sum, or in the case of grain, fruit, wool or hair and beasts of burden, four times the loan, (VIII. 151). Subsequent law-books speak in more and more elastic terms. In some countries loan grows to twice the principal; in others 3, 4 or 8 times. Gold may grow to twice; grain to thrice; clothes to four times; liquids octuple; interest on women and cattle may grow up to their

¹ This form of interest is prohibited in the Arthafastra (III 11)

If a large or small inferest is taken on condition that the loan is to be repaid on a certain date, and that, in case of non-payment, it is to be trebled or quadrupled, that is called period; at interest "-Haradatta

³ See Manu, VIII 153 Coms

issue (Vis. VI. 11-15; Nār. 1. 106 f.). According to Vṛhaspati gold grows to twice; clothes and base metals thrice; grain, cdible plants, cattle and wool four times; pot-herbs five times; seeds and sugarcane six times; salt, oil and spirits eight times (XI. 2).

No interest accrues for a pledged loan where the pledge yields profit (Gaut XII. 32; Manu, VIII.

Perfecture and moratorium 143; Vis. VI. 5; Yā₁. II. 58; Arth. III. 12) nor such a pledge (i.c., a usufrnctuary

mortgage) can be given away or sold for default. If the pledge is misused, the creditor forfeits the interest and has to pay the price (Manu. VIII. 144; Vis. VI. 6), for un-authorised use he forfeits half the interest (Manu. VIII, 145). The pledge must be reconveyed when the debtor is ready, i.e., when he pays up (Arth. III. 12). A moratorium of interests is prescribed for persons engaged in long sacrifices (dirgbasatra), diseased, living in teachers' place, minor (volum) and pauper (asāram) (Arth. III. 11) as well as for a person for whom it is physically impossible to pay, e.g., an imprisoned man (Gaut. XII. 33 and Haradatta). Payment of debt cannot be refused by the creditor but may be kept in others' custody free of interest. Debts neglected for ten years except in the case of minors, aged persons, diseased, involved in calamities, sojourning abroad shall not be received back (dašavarsopeksitam namapratigrāliyam, III. 11).

The strict injunctions of the Sastras against violation of legal or customary rates together with the growing elasticity of the rules show that the practice shaped the theory rather than theory the practice. The Arthrástra (III. 11) and Yajñavalkya (III. 61) think that the welfare of state requires a strict security of lending transactions and prescribe fine for transgressors. Manu forbids six special forms of interests (VIII. 153). While m earlier books moneylending is tolerated (Gaut. X. 6, XI. 21) it is condemned in later

works in emphric terms (V is II 41 f., Baudh 1 5 10 23 25, Manu, III 153, 165, 180) obviously because it degeocrated into usury ¹

A debt unlimited by time is bequeathed to sons, grand sons or lawful heirs or joint partners of debt (sabagrahinah pratibhuvo va, Arth III 11, Gaut XII 40) A deht is inherited down to three generations not Inheritance of lebt to the 4th (Vis VI 27 1, Nor I 4, Vi a dered t XI 19) Debt contracted for the benefit of a united family must be discharged by the members even if they have separated afterwards (Minu, VIII 166, Vis VI 36, Nar I 13) A husband is responsible for his wife's borrowing, not a wife for her husband's except in the case of herdsmen, hunters, vintners, dancers and washermen who live and earn with their wife (Arth III 11) According to Visnu however, the husband and son is not to may the debt of his wife or mother except in the case of herdsmen, hunters, etc. (VI 32, 37) Money due by a surety, a commercial deht, a bridal fee (sulka). debts contracted for spirituous liquoi or in gambling, and a fine shall not involve the sons of the debtor (Gant XII 41) For clearance of unpud deht the heir of a surety for payment is liable, not of a surety for appearance (Manu, VIII 159 f . Vis VI 41 . Vi X 41) From the Jatakas at appears that dues were inherited also on the creditor's side. It is for a deceitful debtor (dharanako) to refuse to pay to the creditor's son on the creditor's death (IV 45) Another vicious set ruined a merchant family (settlikula) by repudiating their debts Those who bired their land or carried on merchandise

"Those who bired their land or carried on merchandise for them, finding out that there was no son or brother

¹ The Sustra rules are planely the reason why Achian rules into the statement. The Ind and neither put out money at usury nor know how to borrow. It is contrary to established usings for an Indian ether to do or to suffer a wrong and there fore they neither make contracts nor require securities. (V L iv 1)

344 SOCIAL AND RURAL FCONOMY OF NORTHERN INDIA

in the family to enforce the payment, seized what they had in bands 1 and ran away as they pleased

Ye pi nesam khettam va bhata ia inam codetvi ganhanto nima natthiti attano attano hatthagatam gahetva yatha rucim palayimsu, VI 69

Of course repudiating a lawful debt is condemned and the perjurer becomes an outcast suit (vasalo, Sut 120) For disputed cases debt suits were resorted to The bond

was the most effective document hesides which there must be more than one witness, and at least two acceptable to both parties A debtor cannot be sued simultaneously for more than one debt by one or two creditors (nanarna samava)e tu naiko dvau yugapadabbivadeyatam anyatra pratisthammart) excepting in the case of a sojourner who is to pay in the order of borrowing (Arth III 11).

A recognised form of payment both of principal as well as of interest was by personal labour statement by service (kayika) and the creditor could claim this

Pyment by service (kayika) and the creditor could claim this as a right if the debtor failed in his stipulation (Mbh VII 109 15) Manu of course, qualifies this rule with the clause—" unless the debtor is of superior caste to the credito. (VIII 177) which may well correspond with practice if for 'caste is substituted 'power and position. The creditor might even take the defaulting debtor or any of his wards into slavery as happened in the case of Isidasi who was carried away by force in hea of debt and accumulated interest (Thering 444)."

[!] Cowell and Rou e render hatthagata as will tiley cold lay the lands provide should ce to ally te reseducations

These rules goe the led rect to the remark of foreign memors sta. A nong the Indians one who a unable to recover a loan or a depost has no remedy at law All the cred tor can do s to blame havel for trosting a roque (Vieg Fr o7C N col Bannes 44 Stob Serm 49)

Tor enslavement from debt see Bk VI Ch I

On the legality of force in realisation of debt, law-givers are of two opinions. In Apastamba it is reprobated for a creditor to sit with bis debtor hindering him from fulfilling his duties and thus forcing him to pay (I. 6. 19. 1). But force is approved in Manu (VIII. 49), Visna (VI. 18 f.) and Vrhaspati (XI. 55). The creditor might employ an agent to realise debt by showing the bonds (Jät. I. 230).

Turning from legal quibbles to actualities and realities

of the situation, it may be observed that Plight of insolvent the debtor being the poorer and weaker party always stood at a disadvantage with the creditor irrespective of their castes In the Anguttara nikāya it is frankly admitted that if the debtor is poor he may be put to jail for any trifle ranging from 100 down tu } kahāpaņa, but not so if he is rich and powerful (I. 251). The imprisonment was preceded by severe humiliations and hecklings. One gets into debt in straits and when the interest falls due (kālāhhatam vaddhim) and he is a defaulter, the ereditors press him (codenti), heset him (anucaranti), dogging his footsteps and vexing him, throwing mud at him in public or in a crowd and doing like things that eause pain (atapa-trhapana, etc. Com.) and at last bind him (bandhanti) (Ap. III. 352). Creditors are known as beckling and pressing debtors for payment at very daybreak (Su. I. 171). A debtor, though a Brahmana is pressed so hard by the creditors that he goes into the forest to commit smeide (Jat. V1, 178). Another insolvent asks his creditors to appear with their bonds only to commit suicide in their presence (IV. 262). Such a terror they were that a whole settlement of defaulting carpenters shipped off overnight in an unknown voyage (IV. 159). No wonder, it is a bliss to be without debt (An. II. 68). The man who cooks his own humble pottage but is free from debt (arni) is the happiest man on earth (Mbh. 111, 311, 115).

CHAPTER II

BANKING

Hoarding Deposit and its laws Origin of banking—economic influence Corporate banks Industrial banks. Fixed deposits and endowment is in guild banks. Real property as depost. Pate of interest on fixed deposits. Security and stability Ubonity of banks. Comparison batween the North and the South

As has been seen, usury was disreputable, and it was not always easy to recover a loan. Hence to lend one's hoarded money it interest was not preferred by all. Safety, rither than profit, was the prime consideration for many. They buried gold or come and r, round, generally in a forest or in r ver bank (I 227, 277, 323) or in some other locely place. Huge amounts,—of the description of 18, 30, or 40 crores thus remained in the custodranship of the Earth though not as safely as the depositors expected. For kings and robbers were always rigilant over these troves and a flood or crossion might sweep away all traces of the buried treasure.

An honest depositary was more reliable than a clod Rules on deposit adumberated in the Smrtis show that to receive and properly discharge a deposit from a known person was a very common institution. The laws of debt either apply ipso facto to deposit or the rules governing deposit are formulated on the same lines as the rules of debt and pledge. The Artha-fastra also states that the laws of debt apply to deposits (upanidhi). In case of foreign invasion, natural calamities and accidents the depositary is not answerable for loss Otherwise a used or lost deposit is not only to be requited but a fine is to be fixed (IH 1:). The Jatakas are familiar with this practice.

faith to a person and to misappropriate it was penal (I. 375; II. 181). A depositary who spends a cash of a thousand pieces, compounds by giving his daughter to wife to the depositor (III. 342) or with the same amount (VI. 521).

Thus, much before the Christian era were developed the two pre-requisites of banking, viz., Origin of Banking the practices of lending money at interest and depositing property for safety. The former was morally retrograde because it had a definitely economic import and smacked of selfishness and avance. The latter suffered under no moral stigma and the depositary even acquired virtue by acquitting himself unselfishly. These two institutions, ethically antagonistic but economically akin, fused into one under the dominating demands of the market. The honest and virtuous depositary found it worth while to lend the deposit to businessmen for interest, disregarding what moralists might say of him. The depositor in his turn claimed a part of the interest so derived. The latter thus obtained an interest from his deposit and the former an interest from its further investment. Thus deposits became safe. The depositor and the depositary met each other's demands, and so the depositary and the businessman in search of capital And none had to stand on virtue, each had his returns in cash.

This development is clearly indicated in the statement of the Arthasastra that the rules of upanidhi 'deposit! apply to niksepa (investment) (III. 11). That is, if one receives an investment he has to discharge his obligations in the same manner as if he receives a deposit simply on good faith. Of course individuals were not often competent to accept such obligations. It was the guilds and corporations who received deposits and lent them to business thus functioning as banks. This also is illustrated in the Arthasastra where it elaborates its unscrupulous revenue-making devices. "King's agents

The rate of interest on fixed deposit, i.e., where those kahapanas are not to be repaid, their interest only to be enjoyed," is according to Nisik 12 v., 1 pratika monthly for the 100 when the deposit is 2000 kāhāpanas and ½ pratika monthly for the 100 when the deposit is 1000 kāhapanas. Thus,

the interest on fixed deposit of 2000 is 12 p c per annum

Nasik 17 vin corroborates the former rate but the deposit is much less, only 100 kahapanas. The rate in the Mathura Inscription is much higher. The interest on 1100 purānas is sufficient to enable 100 Brāhmanas to be served daily and the destitute and bungry recording to a fixed schedule. Probably the rates differed from place to place and from time to time and sometimes even in the sume place and time according to the credit of the bank. In any case it was lower than the customary rate of 15 pc. per annum of ordinary lending transactions because of the better security afforded to depositors. "The low rate of the interest in fact is an index at once of the security and stability of the banks, their efficiency, perminence and prosperity which attracted to them even royal deposits and herefactions."

The execution of the objects of the endowments required much extra-professional skill, e.g., planting trees, providing medicine, supplying ghee and the like. Big deposits were to additional security. The banking operation of guilds and businessmen was not confined to any particular place and

Protika seems to be the same as langapone as Bubler thinks This is however refuted by Senart E I, VIII 8

Silver com not copper karsāpana

¹ R K Mukherp Local Self Government in Ancient India p 98

time after its heginning which is traced back to the Christian era. The Gupta inscriptions record similar benefactions of deposits (aksayanīvī) of which the interest alone was appropriated for charity on behalf of bhiksus and the capital kept in tact. D. B. Spooner who discovered no less than sixteen specimens of a seal at Basarb from Gupta times hearing the legend 'sresthi-nigamasya,' is Ted to remark: "Banking was evidently as prominent in Vaiśālī as we should have expected it to be judging from the notice in Manu to the effect that the people in Magadha were bards and traders." But the South led the West and the East in these activities. There are profuse South Indian Inscriptions of grants providing for sacred lamps at shrines sometimes received in kind according to the convenience of the donors and trustees. The point of difference between the Northern and Southern inscriptions is that the rate of interest of the latter is a bit bigher ranging hetween 12.5 and 50 p.c. while that of the former is hetween 9 and 12 p.c.2. In South India moreover such deposits were received not only by industrial guilds but also by village unions who invested the deposit in public works.5

Annual Report of Archaeological Survey, 1913-14, p. 123.

CHAPTER III

EXCHANGE AND CURRENCY

Origin of currency Barter Standard media of exchange. Transition to currency Poregin or Indian origin. Vereign come and their inflinence, Persian rights, Roman gurent and denorme. Darter holds ground

Development of currency 'Circulating monetary weights' Metric divisions' Attestation punch marks, by traders, by local government, Local character of coin types

Metallic contents of currency Gold, Silver, Copper, - the standard harranana, the tokens of harranana, fluctuating re 2002 a The exchange ratio - gold and aller, gold and copper, fluctuating relations Other metals.

State monopoly of currency Private coinage State regulation D. basement of coins. The ruposition of science of currency and coinage

The evolution of currency, by usbering in Credit and Banking changed the face of the 'coononic world. But it was a slow and long process. The primitive method of exchange was virtually confined to barter. As late as in Dharmasütras and the Pali canon it is a very common practice (Cv. VI. 19. 1). Gautama (VII. 16 f.) and Vāšiṣṭha (II. 37 f.) permit this on special commodities. A potter barters his wares for rice, beans (mugga) or pulse (kālāya) (Mn. 81). The system prevails in as small scale as obtaining a meal for a gold pur (Jāt. VI. 519) or in as big scale as between 500 wagons and wares of corresponding value (Jāt. I. 377).

From barter of goods the next stage was to use certain commodities of general value as standard

Standard media of exchange. The earliest and commonest of these were the cow and rice. The medium of course versions are the cow and rice.

rice. The medium of course varied according to the class within whom it circulated. Among the military class horses suited better. The tribute proceeds of a day are estimated at above the value of 1,000 horses (Mbh. III.

195. 9) and a teacher's fec is measured as 800 steeds of the best breed (V. 106. 11). Slaves, rice and other food grains were similarly used (Jāt. I. 124 f.; Mil. 341). Pāṇini, besides mentioning kaṃsa, śārpa and khārī, i.e., grains of these measures, testifies to the circulation of go-puccha or eow's tail (V. 1. 9) and of vasana or pieces of cloth of definite value (V. 1. 27).

The media of exchange and their replacement by a metallic currency depends on the stage

and corrency. uniform among all communities and in all localities the means of exchange necessarily varied even at the same time. Skins of game animals were the most suitable media for the nomadic and hunting aboriginals. For pastoral tribes like the Abhīras domestic animals like the cow and not their skins are the appropriate measures of value. In the agricultural slage, agricultural products, particularly the staple corn come to be used as currency. As commerce develops diverse articles such as garments, coverlets and goatskins become circulating media (Av. IV. 16). Metals and shells, first worked into ornaments, turn into media of exchange and then into units of currency. The former stage was reached though on a very limited scale and within limited circles at the time of the carly Vedic literature. The latter and the final stage is seen for the first time in the Vinaya,-the 11th and 12th Bhikkhuni Nisaggiva Rules and the Cullavagga.1

These and many other evidences refute the theory of foreign origin of Indian metallic currency propounded by Keneddy and Smith. It has been held that "introduction into

India of the use of coins, that is to say, metallic pieces of

Mäsakarüpaass, V S 2; XII J 1 "It is evident from the use of the word 'jūpa' here that stamped pieces of money were known in the valley of the Ganges as early as the time when the Cullavagga was composed." Rhys. Davids: Vinaya Texts, fort note. 45-1365B

definite weight authenticated as currency by marks recognised as a guarantee of value, may be asembed with much probability to the 7th century B.C. when foreign maritime trade seems to have hegun." 1 Now foreign maritime trade began much earlier, and the carliest kārsāpana eoins found in India bear no evidence of foreign influence. On the existence of an independent Indian coinage in the 5th and 4th centuries B.C. Rapson argues :-- (a) the square Indian form cannot be traced to the round-shaped Western coinage, (b) the square coin was so firmly established in cir. 200 B.C. that it was imitated by the earliest Greek settlers, viz , Demetrius. Pantahon and Agathoeles, (c) and it is represented in the sculptures of Bodh Gaya and Barhut. Thus native coins were in eirculation along with the Persian sigloi in the Aehemenian period.2 Of course Smith is true so far as with the growing trade

and other contact with the West, foreign Infinence of foreign coins circulated in India and influenced coins Persian siglos the native comage. Since gold in relation to silver had a higher value ahroad than in India, foreign merchants exchanged their silver for Indian gold. This accounts for the large number of silver coins for nd The Persian sigloi thus circulated freely in Indian satrapy (cir. 500-331 B.C.) and this is confirmed by the adoption of the Persian weight standard for their silver coin by the Bactrian princes in India "with the object of bringing the Graeco-Iudian silver coinage into relation with the Persian coinage, in such a way that two Greek hemidrachms of about 40 grains might be the exact equivalent of a Persian siglos of 80 grains."

Imperial Gazetteer, II 135

J.R A S , 1895, pp 969 71

³ See infra . p 363

Rapson, op cit , pp 867 f

In the days of the Periplus, among the imports to Barygaza are "gold and silver coin. on Roman aureus and which there is a profit when exchanged denative for the money of the country" (49). "The profit on the exchange was due to the superiority of the Roman coinage to that of India, which latter was still crude, of hase metal (hronze nr lead) for which even the hullion was imported." The Roman aureus and denarius were current throughout western India and strongly influenced the Kusana and Ksatrapa coinages. The dinara appears as a current coin and finds its place in later Smrtis (Vr. X. 14 f.) and epigraphic records. The Yueh Chi Kings in India struck their coins in imitation of Rome so that "tn the present day ancient drachmae are current in Barygaza, coming from this country (Bactria) bearing inscriptions in Greek letters and the devices of those who reigned after Alchander, Apollodotus and Menander" (Peri. 47). After the conquest of Kabul. Kaduhises I imitated the coinage of Augustus and Tiberius (14-38 A.D.). When Roman gold of the early Emperors began to pour into India in payment for her merchandise and as the Roman coin was accepted throughout the commercial world at that time, the advantages of a gold currency and of the Roman standard weight were realised. For the facility of trade Kadphises II struck and issued the orientalised aurei on a large scale, agreeing in weight with their prototypes and not much inferior in purity.

Thus metallic currency, bnrn and brought up in the soil, was influenced by foreign coinage.

Continuation of barter

But money regulated nnly a part of the husiness of the land. Traffic hy barter

held its ground all through. 2 When a dog is hought for a

¹ Schoff. But gold and silver currency was known in India from much earlier times.
² It still prevails in this country. It is wrong for Rhys Davids and Mrs Rhys Davids to hold that "the older system of traffic by barter had entirely passed away never to return." Buddhet India, p. 100; Cambridge History, p. 217.

'monetary weights' and the realisation of their usefulness by the civil authorities, the punch-marks became the affair not of private dealers but of local authorities in a district or "The greater exactness of weight and the security against fraud afforded by the imperial coinage and the best of native coinages have rendered the use of the moneychanger's private stamp less and less necessary. If then, in ancient times the issue and regulation of the coinage was mainly or exclusively in the hands of the local authorities, the use of these distinguishing marks must have been merchants or money-changers, to whom we have attributed the obverse punch-marks, had simply to submit their coins to the chief authority in the district, who rejected such as were deficient in weight or quality of metal, and sanctioned such as were approved by marking them with his official stamp, which may perhaps be identified with the solitary punch-mark so often found in the centre of the reverse. The occasional occurrence of more than one of these reverse punchmarks on a coin is naturally explained by supposing the coin to have passed current in more than one district, and consequently to have been officially tested more than once."1

Rapson's inference is corroborated by the passage in

Local character of

the Visuddhimagga which indicates that every place which issued coinage had its own distinguishing mark or marks stamped

own distinguishing mark or marks stamped on it, by observing which the shroff could at once tell from which place any particular coin came. "Discoveries of punch-marked coins with their provenances definitely known......give rise to the incontestible conclusion that they constitute coinages peculiar to three different provincial towns,—one belonging to Takṣaṣilā of North-West India, the second to Pātaliputra of Eastern India and the third

to Vidisā of Central India." Even up to a later stage Indian coins preserved their local types. The great Empires did not enter a homogeneous coinage. "Each of such an empire has, as a rule, retained its own peculiar coinage, and this with so much conservatism in regard to the types and fabric of the coins, that the main characteristics of these have often remained unchanged, not only by changes of dynasty, but even by transference of power from one race to another." In the extended dominions of the Graeco-Indian and Indo-Scythian princes or of the Guptas or of the Hunas, distinct varieties of coins were in circulation in different districts at the same time. The provenance of the coins is sufficient evidence to this fact.

The metal so stamped and used differed in the districts.

Metallic aubstances.

The standards adopted might be gold, silver or copper. After Kadphises II introduced gold coinago in the 1st century A.D., it continued to be the standard money for a long time. The Western Kṣatnapas retained silver currency in Mehoa, Gujarat and Kathiawad. In Besnagar of Eastern Malwa again, all the finds from pre-Mauryan to the Gupta times have been copper kārsāpaṇas.

The first to get into coinage was gold. Gold ornaments
and jewellery being commonly used as
a form of reward or payment, the
transition to coinage was easy. A clear example of this

D. R Bhandarkar : Ancient Indian Numismatics.

² Rapson: Catalogue of Andhra and Keatrapa Conn, p. xi. The author cites the instances of Oreck Princes Paotakon and Agathor'es retaining the Taxila type, the Seythian Rangubia retaining the estier Greek type in Mathura, the Ouptas continuing the type established by the Western Kastrapas in Ou arat.

³ The pre-entation of divinities of different faiths in the coins of Lanijka and Huvika, vir. Greek, Egythic, Zorosstrain, Ved e and Buddhit gate rise to the theory that those kings were supporters of an ecfectierum in religiou. Rapson explains this differently. "The natural explaint on if this diversity is that these various classes of coins were current in the different promotered a large empire... The coins, no doubt, reflect the particular form of foligion which presuled in the district in which they were struck." Rapson: Andrea and Realings Coins, p. 21, foothors.

is nişka which in the Rg-Veda meant a necklet or medallion, in later times became successively a unit of weight of gold and a gold coin. In the Vedic times "a gold currency was evidently beginning to be known in so far as definite weights of gold are mentioned." These are the niska, the satamāna, the suvarņa, the pāda and the kṛṣṇala.2 Pāṇini knows several of these (V. 1) and the Smrtis cite them as weight standards. Gold coins occur in the Arthasastra (II. 14) and in the Jatakas, -e.g., the nikkha (IV.460f. VI. 246 f.), the suvanna (VI. 69, 186) and the suvannamāsaka (IV, 106; V. 164). The kahāpaņa also sometimes appears as a gold coin (I. 478). The Samantapasadıka says that a kahāpana may he of gold, silver or copper.8 The hirañña while generally indicating hullion in compound with suvanna, sometimes occurs also as gold coin, as for example when Anathapindika purchases the Jetavana hy paving it with these coins. But there have been no actual finds of gold coins from those early times. "Some thin gold films with punch-marks on them were found in the Sakiya Tope, but these were too flimsy to have been used in circulation as coms."

Silver was a rarer metal in India. Reference to silver in Buddhist canonical works is much more scarce than to gold and other metals. In fact Buddhaghosa omits silver altogether while defining rāpiya as stamped piece of gold, copper and bronze, wood and lac or any of these worked up into ornaments (Vin. 111. 239 f.). But there is no warrant to say that "no

silver eoins were used." For Buddhaghosa himself admits elsewhere of the existence of silver kārṣāpaṇas which figure also in the state mint of the Arthasāstra (rūpyarūpa,—Com. kārṣāpaṇa, II. 12). If silver was scaree in Indian mines, this was imported from foreign merebants for Indian gold and thus a large number of silver puneh-marked coins actually discovered are accounted for. The comparative scareity of silver explains the depreciation of silver weight standards in the Smṛtis. According to these a silver dharaṇa weighs 58 grains to which agree the kārṣāpaṇa silver coins actually found. A futile attempt at currency reform is seen in the Arthasāstra where it tries to bring the metrology of the three metals to the same standard.

In the post-Vedie period the kārṣāpaṇa emerges as a new class of coin seen for the first time in Pāṇini and the Pali canon. Like the other coins, it at first meant the weight of

¹ Rhys Davids : los cit.

² According to the Arthudatra, 89 gauranarapa=1 masa, 15 masa=1 dharapa (nilver).

^{, ,} Manu, 00 gauranayapa - I māya, 16 māya = I acrarpa (gold).

Thus the Artheśatra's dhorane tsiver) in less than Manu's averaya (gold) by only
32 gaurasarapas or 18 satis '0 gras.)—the degree of error being explained by the
fact that the weight of a white mustard seed may algebtly vary in different parts of

362 SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

alone he sufficient to fix its substance qua coin." In Manu and Viṣṇu the kārṣāpaṇa is the weight standard exclusively of copper. Thronghout the Jātaka stories the copper kahāpaṇa is the standard coin in circulation as is shown by the frequent omission of the denomination after the amount whereas other coins are mentioned when intended (Jāt. IV. 378; VI. 96, 97, 332). If these coins do not survive in as much quantity as might he expected it is hecause it is a more perishable metal than silver and apt to he melted into domestic utensils. The mention of kārṣāpaṇa in Manu, Viṣṇu, Yājṇavalkya and the Sātavāhana Inscriptions and its discovery in the excavations at Besuagar Iring its career down to the 4th century A.D.

The standard kārṣāṇaṇa had its token coins. In Pali
literature occur the kahāṇaṇa, halī
Tokens of kārṭā kahāṇaṇa, pāda or quarter kahāṇaṇa,
māṣaka or 1/16 kahāṇaṇa and kākmī or

māsaka or 1/16 kahāpaņa and kākaņī or 1/80 kahāpaņa (Vm. II. 294; Jāt. I. 121, 340; III. 446). Even sippikā or cowry shells are used as petty coin (I. 426). The Artlasāstra distinguishes between the standard and token coins as košapravešāyam, i.e., those which deserve to he received into the treasury, and vyavahārika, i.e., those which are current in the market. The tokens are 1/2 paṇa, 1/4 paṇa (pāda), 1/8 paṇa (aṣṭabhāga), 1/16 paṇa (māsaka), 1/32 paṇa (ardhamāsaka), 1/80 paṇa (kākaṇī), 1/160 paṇa (ardhakākanī) (II. 12). Coins excavated at Besnagar correspond approximately to 146 grains, the weight of a kārṣāṇaṇa and to its fractions of 1/2, 1/4, 1/8, and 1/16 thus pointing these to be kārṣāṇaṇa and its suhdivisions.

The value of the kārṣāṇṇṇa of course changed with the varying value of copper. This is clear from the observation of Buddhaghosa that at the time of King Bimbisāra, at Rājagaha 5 māsakas were

¹ Mrs. Phys Bavide : J.R.A.S., 1901, p. 678.
2 These minute subdivisions are effected by the mixture of alloys.

³ Annual Report of Archeological Survey, 1913-14, pp. 220ff; 1914-15, p. 87.

equal to 1 pāda and 4 pādas were equal to 1 kārṣāpana, which is corroborated by the Jātaka reference that a 4-māsaka piece is of lower value than a pāda (III. 448). Buddhaghosa further warns that the kahāpaṇa of 20 māsakas is the ancient nīlakahāpana,¹ not the Rudradāmaka or kahāpaṇa of 16 māsakas. Ohtously in the scholiast's knowledge the depreciated standard was adopted and followed from the time of the Kastrapa king.

Neither was the ratio between gold, silver and copper steady. In a Nasik Cave Inscription, 1 suvarna is given as equal to 35 kārṣāpaṇas presumahly the silver standard otherwise

known as dharana or purāna. According to the Arthasāstra's metrology the silver dharana and the gold suvarna are almost of the same weight and on that basis the ratio between gold and silver is 35: 1. But as a matter of fact the silver standard was depreciated because of the rarnty of the metal and the extant silver coins generally conform to Manu's weight for a purāna which is about 58 grains. The rate of exchange hetween gold and silver on the hasis of Manu and the Nasik Inscription thus becomes 58×35: 146; i.e., 14:1 approximately, not very far from the present rate. From the Periplus however, Cunningham has shown that gold was to silver as 8:1 gold heing much cheaper in India than in Persia. The same ratio according to the Sukranīti is 16: 1 (IV. ii. 181 ff.).

The relation between gold and copper presents still more difficulties. According to Vrhaspati (and Kātyāyana), the weight of a suvarņa or dināra is 124 grains and that of a karşa 146'4 grains and 48 kārṣapanas=1 suvarņa or dināra (X. 14 f.). Thus the exchange rate between gold and copper is 146×48: 124 or 57: 1 approximately. Copper is thus almost 20 times

The kålakahāpana is noted in Jātaks No. 536

³ Coins of Ancient India, p. 5

its present value. This is intelligible when there is no intermediate silver coin between gold and copper as appears under the Kuṣāṇas and the Guptas. The Sukranīti which gives the rate between gold, silver and copper, fixes it at 16: 1 and 80: 1 respectively so that gold and copper stand at 1280: 1. The remarkable variation in exchange rates is explained by the variation in regional distribution of metals whether obtained from native soil or through foreign exchange and by the still infant attempts of husiness communications to hreak through regional barriers.

Coins might he of other metals beside gold, silver and copper. The Nidānakathā speaks of lead kahāpaṇas. Coins of that metal have been discovered from about the heginning of the Christian era helonging to Strato, Azes and Raūjubula and to the Andbrabhṛtya dynasty. Nickel was traced by Cunningham in the money of the Indo-Greciau kings and it was surmised to have been used by the Kṣudrakas and the Mālavas in the time of Alexander.¹ Potin² was used by Vilivāyakura and his successors in the district round about Kolhapur, by the Andhrahhṛtya kings, exclusively in the Chanda district of the Central Provinces and by the Kṣatrapa dynasty founded by Caṣtana. Buddhagbosa even says that māṣahas of wood, bamboo, palm-leaf or lac might pass current if they bore

From the very nature of its origin it may be presumed that coinage was not a state monopoly. It is wrong to hold that from the earliest times this was the privilege of the state, and Mrs. Rhys Davids is right to assert that "there is no evidence whatever to show that these instruments of

the requisite impression of rupa.

^{1 &#}x27;White iron.'

An alloy of yellow and red copper lead, tin and some dross.
In. R. Bhandarkar: Ancient Indian Numismatics.

exchange (the Jātaka coins) constituted a currency of standard and token coins issued and regulated by any central authority." Coins, at least in the early stages of their growth, might be struck and issued by individual traders, guilds, municipal bodies and district or central authorities. In theoretical works like the Artbaśāstra, currency is worth heing reserved as a state concern. But even here the state goldsmith is to employ artisans to manufacture gold and silver coius from the hullion of citizens and country people (sauvanikah paurajāuapadānām rūpyasuvarņamāvekṣanibhiḥ kārayet, II. 14) without charge of any brassage. Only "in getting a suvarna coin (of 16 māṣas) manufactured from gold or from silver, one kākaņi (½ māṣa) weight of the metal more shall be given to the mint towards the loss in manufacture."

The only way by which the central authority could regulate the currency was by way of the weight of the pieces (Manu, VIII, 403;

the strict maintenance of the standard weight and severely reprimends lowering by even one $m\bar{a}_{\bar{i}}a$. But this was not always possible, and a coin was perforce debased when the supply. of its metal fell short. Debasement might he effected either by reducing the fixed weight or by increasing the alloy while maintaining the fixed weight. The former may be the reason of the mutability of weight noticeable in some of the archaeological finds of $h\bar{a}_{\bar{i}}r_{\bar{i}}a_{\bar{j}}a_{\bar{i}}a$ and its subdivisions. Debasement of gold by means of metallic alloys is known in early Palı literature (upakkilesā, An. III. 16; Sn. V. 92). The Arthasāstra permits an alloy of 1/4 in copper and of 5/16 in silver with four parts of copper and one part of tikṣṇa, trapu, sīsa, and añana. By assaying 113 extant silver coins Cunningham detected an alloy

¹ Mre Rhya Davida : J. R. A S 1901, p 877

varying from 13.8 to 24.8 per cent. Other methods of debasement were the plating of copper pieces with molten silver practised from as early as 500 B.C.¹ and addition of molten copper to a depreciated silver coin.²

The early Indian name of coin is rupa or rupya, apparently derived from the image or The fut asutra. impression it earried. The rapasatra is the science of coinago and currency. In his note on rūpasutta (Mv. I. 49. 2), Buddliaghosa says that the learner must turn over and over many karsapanas. Evidently it was an applied science and much of the knowledge was derived empirically. The shroffs who by observing the stamp marks could at once tell from which place any particular coin came (Visnddhimagga) were versed in the lore. So were the rapadarsaka of the Arthasastra and the rapatarka of Patanjali entrusted with the inspection of coins. The seicneo treated of (1) the metallic composition of coins. (2) their shape and technique, (3) their devices and places of manufacture and circulation, (4) the mint, (5) the offices connected with manufacture of coins and regulation of eurrency. (6) detection of counterfeit coins, (7) and above all making a revenue by inflation and sophistication. The scope and importance of the subject makes it conceivable how it is worthy of scrious study not only for a tradesman but also for a prince for the purposes of administration.

There are Sir, a number of oidinary crafts—elephant drivers, horsemen, charioteers, archers, standard bearers, camp marshalls, camp followers, bigh mulitary officers of royal birth military scouts, men brave as elephants, champions, beroes, warriors in buckskin, home born slaves, cooks, barbers, hath attendants, con fectioners, gurland makers, washermen, weavers, basket makers, potters arithmeticians accountants, and whatsoever others of like kind there may be All these enjoy, in this very world, the visible fruits of their craft. They maintain themselves and their parents and children and friends in bappiness and comfort. They keep up gifts, the object of which is gain on high, to iccluses and Brahmanas,—gifts that lead to rebirth in heaven, that redound to happiness, and have bliss as their result.

CHAPTER I

SERVICES AND ROYAL ENTOURAGE

Occupations oriside the Varitar King a efficit — annacca thathogya, rajunta, 'serenth caste' The second grade,—upraig, rajunka, chanka, bhandagainta The adhyakras,—of slepbatts of horses, of cows others animal doctors. The aghapaka or contrivator The nagaragutitus or police commusa oner Spice Clerks Lower incumbents. The bather and shampoor Spc alats Attats and technicians.

Bureaucracy of the Arthefastra The grades Milhtery and espiousge service Benefits Payment by cash and by assignment of revenue

The four familiar vārttās did not comprise all the occupations of the people Men had to seek their livelihood beyond the old Sastric horizon of agriculture, cattle-rearing, trade (including industries) and usury. The price and the administration developed a crop of offices and servants. A number of independent professions crystallised to meet the complex demands of urban life. Civilisation also produced its scums and dregs, the outlaws and the underworld of society. In a speech to Ajatasattu Makkali Gosāla refers to as many as 4,900 kinds of occupation (ajiva) (Dn. II 21)

The services in the palace and under the state provided a large number of people. The highest officers in government service were the amaccas who were generally, though not always recruited from the same family, often the son succeeding the father (amaccakula II 98, 125) " The amaccas form a class by themselves which is generally hereditary, and in consequence of this hereditary character, to which prohably, as in the case of the Khattiyas, a specially developed class consciousness is joined, possesses a certain though distant resemblance

with a caste." ¹ The rājabhogga, people in king'e pay and service, eimilarly represent a class wider than the amacca, inesmuch as they include also the lower officers. They ere mentioned as a class along with Khattiyas, Brāhmaṇas and Gahapatıs in the Vinaya (Pātimokkha, Nisaggiye 10) and appear to he eynonymous with the rājañāa (Assalāysna Sutta). In the light of the Pali evidence, Megasthenes is supported while stating the high civil servants as a caste. "The seventh caste consists of the counsellors and assessors of the king. To them belong the offices of state, the trihunals of justice and the general administration of public sflairs "(Str. XV. i. 49).

Since administrative arrangements were not uniform in every country and in every age, titles and functions of

officere differ. Some of these were common almost everywhere, othere were peculiar to a particular state. In the

Jätekes the number of amaccas is given at the conventional figure of 80,000 with a senāpati or commander-in-chief of king'e forces at the top (senāpatipamukhāni ssitiameccasahassāni, V. 178). He also discharges peacetime functions like administration of juetice (II. 186; Com. on the Mahāparinihhāna Sutta) and participates in legislation (V. 115). Not a lesser perconality was the purchita who performs sacrifices (I. 334 ff.; III. 43 ff.; Ait. Br. VIII. 24), explains omens and trains up the heir-apparent (V. 127), a fatherly friend and adviser. He is very often seen in sole mastery of all affairs,-temporal and religious (atthadhammānusāsake, Jāt. II. 105, 125, 173; III. 21, 115, etc.). Along with the purchita, the mahāsetthi and the gandhabba are seniormost officers (issarā, I. 413). The former represented the industrial guilds to the court and assisted the king in framing his

industrial and commercial policy. The gandhabba was the chief musician (III. 91). It is unlikely that he was accorded a rank equal to the chaplain and finance minister except with kings having a marked musical taste as for example, Samudragupta or Akhar.

Probably just helow the topmost rung was the uparāja

The lesser amaccas.

Or governor in a province or district
(II. 367). He did not always represent
a king; sometimes he was deputed by a republican government as in the case of the Sakiyas and the Koliyas
(V. 412 f.). In the Maurya empire, princes of royal family
were selected as viceroys of its five provinces and the
practice may have been borrowed from earlier times.

The rajjugāhaka amacca (II. 367) or rajjuka was the survey and settlement officer. In the Arthasastra the survey tax is called rajju and in the Jatakas the officer appears with the rope for measuring lands. Bühler identifies him with the rājuka in Asoka's inscription on whom Hultzsch observes: "The Rajuka originally 'held the rope' in order to measure the fields of the ryots and to assess the land tax. Thus the word became the designation of a revenue settlement officer, just as British India the chief administrative officer of a district is still called 'collector' because his special duty is the collection of revenue." Much earlier than the times of Asoka and of the composition of the Jatakas the original surveyor had become the driver of the chariot of state.: The raijugāhaka amacca is holder of the reins of government and of the rope of survey. The rajjukas or rajjukas are probably the agronomoi of Megasthenes, the country magistrates who " superintend the rivers, measure the land as is done in Egypt and inspect the slnices, hy which water is let out from the main channels into their hranches"

For discussion of his functions see supra, pp 262 f.

² Corpus Inscriptionum Indicarum, Vol. I. p xli.

and who "collect the taxes" (Str. XV. i. 50). In the Arthasastra, the settlement and revenue officer is the samahartr.

The vinicchayāmacca (Jāt. II. 181, 301) or the vohāriha mahāmatta (Mv. I. 40. 3; Cv. VI. 4. 9) is the chief justice and law officer. He tries civil suits and settles points of law when asked to give opinion (Jāt. II. 367, 380). In the Arthaśāstra, the judicial officer is the vyavahāriha.

The head of the treasury is the bhandāgārika and with him went the judgeship of all the merchant guilds (sahbasenīnam vicāranāraham bhandāgārikathānam nāma adāsi).¹ This is marked as an innovation. ¹'Before that no such office had existed, hut there was this office ever after '' (IV. 43). Elsewhere this officer figures next in rank to the senāpati and higher than setthi. The treasurer or keeper of king's purse is sometimes known also as herañāha (III. 193).

There is an inspector of king's jewels (manipahhamsanam kammam karonto, VI. 383) parallel to the suvarnādhyakşa of the Arthaśāstra. His function was the testing of jewels for the palace.

Quite respectable but presumably below this second rank, were the adhyakṣas or departmental heads of whom the Arthaśāstra enumerates twenty-one. They are not, however, excluded from the purview of the Epics. The adhyakṣas of clephants and of horses released their snimals from the stables when the Vānaras set fire to the city of Lankā (Rām. VI. 75, 27). Nala was appointed superintendent of stables to king Rtuparna at the pay of 10,000 (Mbh. III. 67, 6).

The adhyaksas presnppose an advanced and complicated administration which is nnkmwn to the mass of Jatsks 'stories. But so far at least as the elephants and horses

¹ Fick renders " worthy of the regard of all guilds."

are concerned, they give the social and administrative setting in which such offices might develop. They betray a consciousness, no less than the Arthasastra, of the utility of these two animals in the service and protection of the state. The hatthidamaka, the assadamaka and godamaka are the trainers of the three animals respectively (I. 505), and the assagopaka (II. 301) is the keeper of horses. A short but interesting description is given of how the hatthidamaka trains this animal in the arts of war (Mn. 125) and fights king's battles with it (Jat. II, 413). Arts of catching wild elephants by means of tame ones are also briefly noticed (Mn. 125) which are so elaborately described by Megasthenes and fully known in the Rāmāyana.1 The sons of these trainers, by dint of specialised knowledge, succeeded to their father's post (Jat. II. 94, 98, 221; Dn. IX. 32). Elephant-lore (hatthisuttam) and horselore (assasuttam) were cultivated as separate branches of learning (Jat. II. 46) and specialists in this knowledge bear the honorifics of hatthacarina and assacarina (I. 413. 444; II. 20, 98). Even the elephant-doctors (hatthrveija) were in king's service, foreshadowing the lengthy dissertations of Megasthenes and Aelian on the diseases of these animals and the specifics and treatment adopted by experts.

The agghāpaka or court-valuer, assessed the price of goods ordered for the palace. The nagaraguttika or town warden was charged with the arrest and execution of outlaws (III. 59, IV, 289). On receiving a complaint from townsfolk, a king orders him to post patrols at intervals and have the burgler caught (nagaraguttikam

¹ Some elephants strolling in a lotus park saw some men riding on elephants 'lasso in band and said "we are less afraid of fire, issue or other weapons than of these selfish kuntolk who show the way to trap us to the elephant tamers "(VI. 16, 6-6).

² See supra, pp. 2691.

anapetta tattha tattha gumham thapetvā . . III 486) He was like the Police Commissioner of the modern city "Judging from the insecurity which on account of frequent mention of robhers and thieves in the Jātakas and other folk literature must have existed in Indian cities in ancient times, he was no small personage".

The police officer of the Jätakas was not assisted by spies Spies The Jätakas have no department or officers corresponding to the elaborate espionage system of the Arthasastra or of the Mauryas,—"the sixth caste," in which "the hest and most trustworthy men are appointed" and to whom "is entrusted all that goes on, and of making reports privately to the king" (Str. XV 1 48).

Less commonly than now, but not unoften the educated ciers young hourgeoisie settled down in clerical jobs of the secretarist A kulaputta mskes his living by heing a clerk of the signet (muddāja), clerk of accompt (gansnaya) or computer (samkhājens) (Min 13, Dn II 14) or he may be the king's scribe (rajalipikars, lekhaka, Sanchi Ins, Nasik CI, 16 vii; 26, viii, Arth II 10) Hence also mudda, gananā and lekha are among the estcemed arts (ukkattham nama sippam) in contrast to the lower ones of basket maker, potter, weaver, cobhler and harber (Suttavihhanga, Pacittiya, II 2 1).

Below these was a lot of petty officials and mediocrities,

The lower employers viz, the bandhanagarika or the gaoler
who figures in an unenviable company of
tormenting others (Mn 51, 60; An II.

Fick Op cit, p 103

In the Arthaéastra, the samkhyoyaka as among the village officers who may be remourasted with land without power of al enation (II 1) Collivation of statetics and numerical methods (samkha, Mil 59) developed primarily from the need of a crop forecast for accessment purposes

207; III. 382), the donamapaka or corn-measurer, i.e., a tax-collector under the raijuka and presumably the same as the balipatigaāhaka and the niggāhaka who appear as blackguards of royal extortion 1; the sarathi or driver of king's charjot (Jat. II. 265, 367); the dovarika or the door-keeper (II. 241, 367; Mil. 234, 240, 264; Mn. 56) among whom were door-keepers of the palace and gatekeepers of the city. A palace donarika appears in the unfortunate rôle of being thrashed with blows by a whimsical king every time ho went in and out. Tho eity dovārikas were four, one at each gate (Jāt. IV. 289) who watched the gates and closed them at night in a particular hour after shouting thrice to warn those who inadvertantly kept out (II. 379). The dauvārika who figures in the highest rank of officialdom in the Arthasastra must have heen some other functionery.

The various petty officials of the civil and military staff cannot be exhausted by enumeration. We have the chattaagaha (parasol-bearer) and the asiggaha (sword-bearer), personally attending to the king (Jat. VI. 194). Among people who gain their livelihood in dependence on the king (vañño khattiyassa muddhavasitassa.....rājūpajivino jane) are the anikattha (bodyguard), pārisajja (courtiers). bhata (soldiers), balattha (royal messengers), etc. (Mil. 234. 240, 264). The list may be extended from "the people who enjoy the visible fruits of their eraft in this world" viz., the hattharoha (elephantman) assaroha (horseman). rathika (chariotman), dhanuqqaha (areher). (standard-hearer), calaka (camp marshal), pinda-davika (eamp-follower), cammayodhina (warrior in buckskin), etc. (Dn. II. 14). Among menjals further below are alarika (eook), nahāpaka (batbman), suda (confectioner), mālākāra (garland-maker) and rajaka (washerman) (Ibid).2

¹ See supra, p 142

² The renderings are Rhys David's

Toilet, coiffure and shampooing were very common luxurics and hence the barber (sīsapasādhanakappako, Jat. II. 190 ff.) and the hatber (nahāpaka) had a good demand for their services (I. 342). The hathman's art is thus drawn in a parable: "Just as a skilful bathman or his apprentice (nahāpako vā nahāpakantevāsi vā) will scatter perfumed soap-powder (nahāniya cunnāni ākiritvā) in a metal hasin, and then besprinkling it with water drop by drop, will so knead it together that the hall of lather, taking up the unctuous moisture, is drenched with it, pervaded by it, permeated by it within and without, and there is no leakage possible' (Do. II. 76). The process of bathing includes shampooing, rubbing oil, hathing with a fine powder and then costly garland, unguents and garments (XXIII. 9; cf. XVII. i. 23); Mn. 124; Rām. H. 65, 8; 83, 14).

Sometimes services of specialists were necessary for established assisting the military or the police. And they had to be offered a high status and handsome remuneration. Archers (dhanuggaha) capable of exhibition performance are given wages of 100,000 a year (II. 87) and 1,000 kahāpaṇas daily (V. 128)—inequitously high, so as to make the old archers jealous. 1,000 pieces a fortnight was however reasonable at which rate another is taken into royal service and deputed to kill wild animals affecting travellers and to fight hattles (I. 357). So a youth skilled in tracking footsteps is appointed by a king at the daily wages of 1,000 pieces (IV. 45).

A good number of artists and artisans were maintained in the palace for beautification, entertainment and more useful works, e.g., the uyyānapāla (II. 345) or ārāmika (III. 365) or park-keeper who was well posted in the art of gardening and sometimes conceived and worked out royal parks (Rām. VII. 52. 7); the dancers, the musicians, the actors, the bards, the

astrologers, the sooth-sayers, etc., who were maintained with regular allowances in every court. The king had skilled artisans of all varieties for construction of forts, ships, armaments, etc., and for the working of mines, fisheries and other royal industries. The Jātaka commentary says that the king keeps artisans (e.g., vaddhakim) to make instruments necessary for the exercise of viriya or for good and bad acts (V. 242). Nārada exhorts Yudhişthira to givo artisans under his employ raw materials and wages with strict regularity.

dravyopakaraṇam kiñcit sarvadā sarvaśilpinām cāturmāsyāvaram samyak niyatsm samprayacchasi Mbh. II. 5. 118.

The bureaucracy conceived in the Arthasastra is much more elaborate and complex than the small officialdom of the Pali canon. It gives a hierarchical structure with precise classifi-

cation of officials in order of their salsry and rank (V. 3).

The tvik (sacrificial priest), the ācārya (teacher), the mantrī (chief minister), the purchita (chaplam) and the senāpati (commander-in-chief) are accorded equality with the yuvarāja (heir-apparent), the mātr (queen mother), and the rājamahiṣī (chief queen) in the civil list each drawing 48,000 paṇas per annum.

The dawārīka (?), the antarvamšīka (superintendent of harem), the prašāstr (commander), the samāhartr (collector-general) and the sannidhātr (chsmberlain) are each to draw 24,000.

The nāyaka (chief constable), the paura (city officer), the vyavahārīka (judge), the karmāntika (superintendent of manufactories), the mantriparisad (members of ministerial council), the rāṣtrāntapāla (superintendents of countryparts and of boundaries) along with a prince (kumāra) and a prince's mother (kumāramātr),—12,000.

These high scales of salary are fixed with a view to provide against temptation and discontent. "With this they will he loyal and powerful supporters of the king's cause,"—svāmiparihandha-balasahāyā hyctāvatā hhavanti.

Srenīmukhyāh (army chiefs) and chiefs of elephants, horees, chariots and infantry and the pradeṣṭāraḥ (commissioners) get 8,000 each. This is fixed with an eye to allowing them a good following in their sphere (svavargānukarṣino).

The adhyakşas of infantry, cavalry, chariotry and elephantry and keepers of timher and elephant forests (drayya-hasti-vanapālāḥ)—4,000.

The chariot-driver (rathika), the army-physician (anikacikitsaka), the horse-trainer (assadamaka), the carpenter (vardhakı), the animal-keepers (yonipoşakāh)—2,000.

The kartāntika (foreteller), the naimittaka (reader of omens), the mauhārtika (teller of good or had times), the paurāṇika (annalist), the sāta (story-teller), the māgadha (hard), purohita-puruṣāḥ (retinue of the priest) and sarvā-dhyakṣāḥ (departmental superinteudents)—1,000.

Trained soldiers (śilpavantah pādātāḥ), staff of computers and scrihes (saṃkhyāyaka lekhakādivargaḥ), and village officer (grāmahhṛtaka)—500; trumpet-blowers (tūryakāra)—300; actors (kuśīlava)—150; skilled artisans (kāusílpinah)—120.

Servants in charge of quadrupeds and hipeds (catuspadadvipada-paricāraka), miscellaneous workmen (pātikarmika), attendants upon royal person (upasthāytka), bodyguards (pālaka), procurers of forced labour (vistivandhaka)—60.

King's playmate (āryayukta), elepbant-driver (ārohaka), sorcerer (mānavaka), miner in mountains (śailakhanaka), all kinds of attendants (sarvopasthāyinah), teacher (ācariya), scholars (vidyavantah) shall have honoratia (pīyāvetana) ranging from 500 to 1,000 according to merit.

A messenger (duta) of middle quality shall get 10 panas for each yojana he travels, twice as much when he travels

from 10 to 100 yojanas. For spies, schedules vary from 250 to 1.000.

The above list excludes the gopas or census officers and sthānikas or revenue officers under the samāhartṛ. Their work is inspected by the pradestṛs or commissioners deputed by the samāhartṛ (II. 35). The nāgaraka looks after the sffairs of the capital (II. 36).

The hage espionage system in the Arthasastra's cooception of state with its wide ramifications over the whole body-politic is a sad commentary on the moral of the hureaucracy. The higher officers are constantly to he watched with spies lest they stray into sedition and disloyalty and for the dirty job are exploited the lower servants of the household—the suda (sauce-maker), arālika (cook), snāpaka (hather), samvāhaka (shampooer), āstaraka (spreader of bed), kalpaka (harher), prasādhaka (toilet-maker), udakaparicāraka (water-carrier), and rasada (juice-maker) (I. 12).

Superintendents of 100 or 1,000 vargas (groups of staff) shall regulate the subsistence, wages, profit, appointment and transfer (bhaktavetanalābham ādesam vikṣepam ca kuryub). Officers employed to guard royal buildings, forts and countryparts will never be transferred.

The officials of the Arthasastra enjoy the benefits of gratuity, bonus and insurance against sickness. "Sons and wives of those who die in service shall get subsistence and wages. Infants, aged persons or diseased persons related to deceased servants shall also be shown favour. During funeral, sickness or child-birth, the king shall give presentation to the servants concerned."

Karmasu mṛtānām putradārā bbaktavetanam labberan. Bālavṛddbavyādhiścaiṣām anugrābyāh. Pretavyādhitssntikākṛtyeṣu caiṣāmarthamānakarma kuryāt—V. 3.

The Arthasastra lays down a very bealthy maxim with regard to the payment of the officers from the point of view of the state. Although the adhuaksa, the Payments samkhyāyaka, the gopa and the sthānika are among the village officials who may be remunerated with land without power of alienation (II. 1), later in the Book, the author is more eautions. "When short of funds, the king may pay with forest produce, cattle or fields along with a small amount of money (hiranyam). If he wants to colonise waste land he shall pay in money alone (sunyam va niveśayitum abhyutthito hiranyameva dadvāt). But if be wants to regulate the affairs of all villages equally, then no villages will be given (na grāmam grāmasajātavyavabārastbāpanārtham, V. 3). The economist-statesman no doubt profited by the experience of earlier days. The haneful practice common in the Jatakas, of paying the high officers of state like the purchita, the senapati, etc., with grants of land or revenues from villages, was telling upon its authority and financial security. The effect was no doubt hardly different from the reaction of the Jaigir system on the great Mughal Empire.

CHAPTER II

INDEPENDENT PROFESSIONS

Teaching profession — Centres of learning Applied education Fees
Attistic professions — Singer and music player Actor, troupes Bards, mimes,
etc St gmatisation
Occult professions — Astrologer Soothsayer Palmist etc
Miscellaneous

1 Teaching Profession

Besides the services there were independent professions in which people lived by purveying their skill or knowledge for a fee Among these the teaching profession was the most respectable though not the most paying Unlike most others it was a settled profession localised, as in the case of the arts and crafts, in particular cities Bensres was such a centre of learning (Jat. I. 463) A northern Brahmana, after learning all the arts becomes a teacher of world wide fame at Benares and teaches 500 pupils (Bodhisatto udiccabrahmanakule nibbattitya yayappatto sahbasippe pāram gantvā Baranasiyam disapamolkha acariyo hutvā pancasate manase sippam vacesi, I 436) Sometimes the professor repaired to the forest for the isolation and seclusion it give to academic pursnits. A world-famed tencher (disāpamokkho acariyo) of Benares teaching sippas to 500 pupils goes into the forest to avoid hindrances to religious life and to the studies of his pupils and he is supplied free by people of adjoining locality with rice, milch cow and other gifts (III 537) The passage represents ancient Indian education with its best ideals and most realistic setting Religious and academic life were ınseparable and the teacher in his own person set up the standard of 384 SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

that you do not visit. Go then to every village, town and eity and gatheriog a crowd around you first of all sing this soog in the midst of the people."

tumhākam agamanaṭṭhāuam nāma n'aṭṭhi, tumhe gāmanigamarājadhāniyo gantvā samajjam katvā samajjamaṇdale pathamam ova imam gītam gāyeyya, Jāt. III. 61.

Elder Tālaputa was horn in an actor's family, acquired proficiency at theatres suited to his clan (kulanurūpesu naccaṭthāocsu) and "became well-known all over India as leader of a compaoy of actors. With a compaoy of 500 women and with great dramatic splendour he atteoded festivals in village, township and royal residence and won much fame and favour. He was giving performance at Rājagaha (nagaravāsinam samajjam dassitvā) with his usual success" (Therag. 1090ff. Com.). Such a party of actors (śailālaka) lived in Mathurā in the 1st and 2nd centuries of the Christian era whose sons figure as dedicators in a Jaina inscription from that place.

For the actor the professional name was kuśilava,—nata or nataka being the more generic term inclusive of all sorts of artists—the actor, musician, dancer, acrobat and magician. The Arthasīstra is suspicious that the actors' visits may affect the sobriety and thriftiness of the people. At night they are to stay in a particular place and avoid accepting lavish gifts of desire or causing too much loss to acy one (kāmadānamatimātram ekasyātipātam ca varjayeynh). For dereliction, the fine is 12 panas. They may hold their performances to their hking in accordance with

the procedure of their country, caste, family, profession, copulation and language (kāmaṃ deśajātigotra caraṇamaithunāvahhāsena namayeyuh, IV. 1).

With the actor and the musician, the mime, the bard and the story-teller belonged to the same category. They all maintained a peripatetic living, moved in troupes or individually, gave demonstrations and shows in public gatherings and were accorded the same social status. They moved with their women (Ram. II. 83, 15) and if the Sastra injunctions are to be believed, had a very low standard of morals. Adultery is permitted to wives of caranas (actors and singers according to the Commentary) " for such men send their wives (to others) or, concealing themselves, allow them to hold criminal intercourse" (Manu, VIII. 362; Baudh, H. 2, 4, 3). No wonder the professions are condemned (Mbh. XIII, 90, 11) or assigned to the Sudra (Arth. I. 3). The kuśilavas (bards, actors, jugglers, dancers, singers and so forth-Medh.) are unworthy of invitation to a staddha (Maun, III. 155-53); food given by the actor and musician is not acceptable (IV. 210, 214). Actors and teachers of dancing, singing and acting are stigmatised as upapatakins (Baudh, II. 1, 2, 13). Public dancers and actors are all condemned (I. 5, 10, 24; Vis. XXXVII. 32, LI. 13f; Nār, III. 3; Vr. XXII. 3).

3. Occult Professions

A large mass of professionals thrived upon the superstition and credulity of the people by the exercise of the occult arts. Even in the court which attracted the best intelligence and talents of the land the services of the nakkhattajānāha (astrologer) and the nemittaka (reader of omens) are frequently requisitioned to give their studies upon problems (VI. 5). There were also interpreters of dream (supinapāṭbaka, V. 443) and of signs (lakkhanapāṭbaka, VI. 9) who give bogus readings. The practice of these pseudo sciences is damned in the Surfis probably because of the superstitions and public deception they encouraged. Among the black list of disreputables are the pilmist (Mih XIII 90 7), the astrologer (Manu, III 16'), \(\text{Vis L\\III}\) 7, \(\text{ar I 183}\), the weather prophet (\text{ar I 183}\), interpreters of omena and practitioners of proprintatory rites (\(\text{Vr XXII 3}\)). The guises of a lartantila of a nauntitala or of a mauhuritala are helpfully taken by spies in the Arthasastra (I\(\text{V 4 \III}\)).

Uisrellaneous

There were professional wrestlers (mallayuddhaha, IV 81 malla, Mil 331) who fought duels in the ring before the gallery (Jit VI 276). With the nata the jhallas and the mallas ('foncers with sticks or wrestlers and jesters, Com') are relegated to the lowest class (Manu, VII 40). There were bathers who did the customer shampooing and massage with oil, then a good bath with sponge, powder and water and lastly a nice toilet with brush, garland, cents and dress. There were ferrymen (naviko) who forded people across a river for a fee (vetanam) which it was foolish to ask for after crossing (Jat III 230). A more honourable and skilful profession was archery, the expert hiring himself out for exhibition shooting or for some act of prowess. (III 219 ff, V 128 ff. Min 13. An IV 423)

Except for the teacher, the soothsayer and occasionally a good musician or an archer, all these people ranked in the economic scale below the average Their social position was accordingly adjusted They performed no direct productive functions in economic society but they supplied amusements and entertainments, the much needed tonics of laughter humour, thrill and romance Thrither below were other pleberin professions stigmatised in Buddhist and Brahmanical canon, in theoretical as well as in popular literature

Revenue and espionage
The underworld and the state

Megasthenes and the Greek memorists in the Macedonian army observed Indians to be habitual tectotallers and conspicuous for truthfulness and honesty. "They are not litigious. Witnesses and scals are unnecessary when a man makes a deposit, he acts in trust. Their houses are usually unguarded." In Sind, says Onesicritus, no legal action could be taken except for murder and assault. "We cannot help being murdered or assaulted, whereas it is our fault if we give our confidence and are swindled. We ought to be more curcumspect at the outset and not fill the city with higation" (Str. XV. 1 709, 702)

The report derived no doubt from hearsay, or from a parochial or superficial acquaintance, inhitates with every piece of Indian evidence, theoretical or popular. It conflicts even with the Greek ambassador's own statement that theft from royal treasury or evasion of toll dues were punished with death. The outlaw and the underworld, anti-social institutions and foul means of livelihood ran ramping as everywhere but under sufficient cover to escape the notice of a casual observer.

1. Gangster and thief

In those days of insecurity, the robber was public enemy No. 1. An Angulināla was alone enough to scare a whole country like Magadha and a redoubtable King like Ajātasattu. A single brigand sufficed to terrorise a whole city (Jāt. III. 59) There were widely varied types in this class ranging from the petriest pilferer or solitary dare-devil to the highly organised and well-armed gaogs.

The bands of freebooters, notorious in the Jātakas, who infested the outlying forests (III. 220: An. I. 69) where civil authority was weak and thrived by plundering passing travellers and earavans were in reality the old settlers of the land who were dispossessed but were intractable enough to submit to the Aryan fold. These half-savage, semiharharous tribes-the so-called mlecchas, occasionally broke into the settled tracts (paccantagame) of their neighhours, and from there carried off prisoners for slaves (III. 147; IV. 220).1 The robbers in a robber village go to the woods to attend to a visiting king (coragāmakavāsino corāpi rañño ārakkhatthāya araññam eva pavisimsu). The chieftain's wife goes about elad in leaves and branches (sākhābhangam nivāsetvā carati, Com. IV. 430 ff). They make human sacrifices to their deity (Therag. 705 ff). These tribal gangs had various 'methods of plundering people. They practised highway robbery and hurglary (panthadubbanasandhicehedādīni karanto jīvikam kappesi, II. 388; panthadūsakā, Mil. 290) or they perpetrated gang actions on whole villages (gāmaghatakā; Mil. 290). Sometimes they gave an ultimatum and worked out the threat if the demand was not 'met (pūrvak tāpadānam pratijūāya apaharantam, Arth. IV. 8). Sometimes they hit upon a novel device which gave them a new appellation (pesanakacorā): when they caught two prisoners interested in one another,

The Afridis of Wazimstan offer a modern parallel.

 $c\ g$, a father and a son or a teacher and a pupil, they kept one and despitched the other to fetch a ransom (Jat I 253, IV 115)

Apart from the gangs, there were individual thieves and pilterers in the settled places, people who took to eniminal activity from within the town and villages (III 436, 514, Mn 13, 129). A thief after breaking into a house in a suburban village flees with his bands full of plunder (cko coro magaradvaragame chasmim gehe sandhum chinditva hatthasaram adaya palajitva. III 33) Cattle lifting was a chosen line of the small pilterers as well as of the big gangs (I 140, IV 251, VI 335)

The strength of the gangs is conventionally given at 500. Like the industrial aits their trade was organised in village guilds of their own (coragama) with a ringleader as heid (coragethaka, I 297, II 385 IV 430). They had their own tride morals, their tribal or gang laws held sacrosanct as the laws of all guilds and faces. In a robber village, a cook is rebuked by a loyal and wise parrot for cootemning the robber's trade (corakammam, IV 430ff). The Arthasastra lays down that transactions relating to robbery (sahasa) are valid though done at night (III 1). Quoting katyayana, Vivaduathakara says that threves and robbers belonging to a guild are to divide their body in the latio 4 3 2 1 according to ability and if one of the gang is arrested money spent for his release is to be shared by all

To handk the crime of outlawry, the state and the public had one maxim, not different from that of other ancient civilisations, tiz, an eye for an eye and a tooth for a tooth. When the people caught a suspect, rather than let justice have its own course, they preferred to take it in their own hands. They "bind his hands belind bis back and lead him to the place of execution scourging bind in every public square with whips (pacebalaham

bandhitva catukke catukke kasihi talenta aghatanam nenti, III 436). Very often the culprit succumbed to this first deal of justice (III 514). If the man managed to reach the custodians of law and order, ruthless torture was resor ed to for extenting confession (I 384) with the result that immocent people were often victimised. The legend of Mandavya occurring in the Kanihadipayana Jutaka, in the Epics (Mbh I 63–52, 107) and in the Arthasistra (IV 8) is a classical case. A third escaped delivering his hooty at the door of the ascetic, the latter, though innocent confessed his guilt from torture and was impaled. Yet an unscrupulous espionage system and relicitless torture are enjoined in the Arthasistra to deal with these climes (IV 5, 6, 8)

After confirmation of guilt, the offender was punished by whipping, mutilation, impulement, death or other ingenious methods of torture gruesome in description (Mn 18, 129, An I 46, II 122, Sn II 128) The customary punishments for a cora are uprooting his eyes (cakkhuppatanam), impalement on a stake (sularopanam), and relieving the trunk of the head (sisacchedanam), and these do not exhaust all (Mil 166, 185, 197) He may be thrown down from a cliff (corapapata, Jat IV 1 1) He may have his hands, feet, nose and cars cut off and drifted down a river in a canoe (II 117) Death, in any case, was his sure destiny even if the offence was so small as to pick up a parcel from the high road (V 459) Some times the people took not only the first but the final deal of justice with themselves and left a cattle lifter cutting off his hands and feet (VI 335) Megasthenes testifies to this system of torture and death sentence in the Maurya administration and Manu falls in line with the current tiadition by prescribing for the thief capital punishment (IX 270), mutilation of impalement (276f, Vis \ 136, Nar Intr 34, \r \XXII 17) Only the author of the

Arthaśāstra is enlightened enough to lcave provision for fine which ranges from 12 to 95 panas according to the value of the articles stolen or robbed (III. 17). The pirate and the cattle-lifter alone do not deserve this leniency and have to pay the highest penalty, such a nuisance they had made of themselves (II. 29).

Was there no relief against the universal application of lex talionis? Even in the Jatakas were not unknown better methods of criminal investigation than forcing a suspect to disgorge guilt by torture (I, 384). We have seen a tracker of footsteps in action under a king (III, 505). The Arthasastra evinces the knowledge of various scientifio processes like study of foot-prints and physical expressions, identification by the smell of body from a piece of rag left at the place of occurrence, etc. (IV. 6). Rama's precept to Bharata was that a suspect should be convicted only when he is caught in action by the owner or by the police. or after cross-examination, although care should be taken that he did not obtain release by bribe (Ram. II. 57). The practice of impalement of robbers on a stake is referred to in a Jataka story as "prevalent in those days" (III. 34). implying thereby that there might have been a change for the hetter when the story was crystallised. And enlightened statesmanship was not lacking like that of the counsellor who advised his king that against lawlessness and hrigandage, taxation and punishment were not the right redress; the war has to be waged not against criminals but against the sources of crime, viz., poverty, unemployment and discontent (Dn. V. 11).

2. Hired Assassin

Rogues might be hired for murder. Devadatta employed cut-throats (II. 416) and archers (III. 97) for the murder of Buddha. The Arthasāstra knows such

wretches (IV 7) The line charge for an assassination is 1,000 kahapanas (Jat V 126)

3 I orger

The forger (praturupakaraka, Mih XII 59 49) practised his evil art with falle coins, gold, pearly, gems, etc. The Arthasastra evinces a good knowledge of his trade. A manufacturer of counterfeit coins (I utapanakaraka) may be suspected for frequently purchasing virious kinds of metals alkalis charcoal, bellows, pincery crucible, store and hammers, having his hands and cloth dirty with ashes and smoke or possessing such other acce sory instruments

Yam va nan ilohal saranam amgara bhastra samdamsa musikadhikaranivitaml amuvanamabhiksnam kretaram musi bhasmadbumadigdbaliastrvasulingam karmaropakaranasam vargam kutajupakarakam manyeta

He may he betrayed by a spy getting into apprentice ship under him. The culprit is to be hinshed. The same procedure and pendity is prescribed against the dealer of counterfeit gold who lowers its quality with alloy (ragasyapharta Lutasuvarnavyavahari). To utter a counterfeit coin into the treasury entails death sentence, and to deal with it, a fine of 1,000 panas (IV 1, Munich MS). According to Brhaspati forgers of gems, pearls or corals are to be tested by oath or ordeal (A 1, XXII 14)

4 Impostor

Sharpers and swindlers (nel atika, vaneanika Mil 290) who lived by blackmul were not as rare, nor as easily let off, as Onesieritas would have A typical one is the robe tailor (civaravaddhako) who cheats buyers by bartering new cloth with rag inade robes which 'after the dyeing was done, be would enhance in colour with a wash containing

flour to make a dressing, and 1ub it with a shell, till he makes it quite smart and attractive " (Jāt. I. 220). Manu is very elaborate on the ferreting ont of and dealing with all kinds of cheats, both open and concealed (IX. 257-62). According to the Santiparva a sinful wight living hy deceit is to be ostracised or killed at sight (109. 23).

5. Sorcerer

The impostor appeared under a special garh with his practice of black arts. A typical diviner was Vangīsa, a Brāhmana of Savatthi who used to divine by tapping a skull where its former occupant was re-born (Therag. 1209 ff. Com.). The Arthašāstra narrates various practices of witchcraft and sorcery meant to blackmail the people (V. 2). There was, e.g., the kuhaka and the sambodhanakāraka who can secure a woman's love with magical charms (IV. 4). Manu punishes sorcery with a fine of 200 panas (IX. 290).

6. Gambler

Gambling in dice with jugglery and stakes (Jāt. VI. 280ff) was in high favour among all classes and it was the chief pastime in the palace (I. 280f), not excluding a pious king like Yudhisthira. Besides, there were habitual or professional gamblers (dhuttā, akkhadbuttā) in every city (Dn. XVII, i. 6, 29, 32; Mn. 87). Betting or wager over animal fights, races, etc., was another common custom. A Brahmana and a merchant het to the tune of 1,000 pieces over the capacity of a draught bull (Jāt. I. 191f). There is a wager of 5,000 over a duel between a snake and a fiog. One of the hetters demands and obtains a surety (patibloga) from his opponent (VI. 192). Aclian says that in the ox-race where an ox is yoked to a chariot between two horses, rich men and owners of oxen heavily betted and even the spectators against each other (XV. 8)

• 50—1866₿

The evils of gambling and the deterioration in social status of the addict (of course when he was a small fry) are constantly harped upon by saner counsel. According to a discourse of Buddh i the addiction (jutappamadatthanāniyoga) is one of the six channels of dissipating wealth and is accompanied by six dangers. "As winner he (the gambler) begets hatred; when beaten, he mourns his wealth; his actual substance is wasted; his word has no weight in a court of law; he is despised by friends and officials; he is not sought after by those who would give or take in marriage, for they would say that a man who is a gambler cannot afford to keep a wife " (Dn. XXXI. 7, 11). The economist's sermon goes : "The same wealth that is won like a piece of flesh in gambling, causes enmity. Lack of recognition of wealth properly acquired, acquisition of illgotten wealth, loss of wealth without enjoyment, staying . away from answering the call of nature and contracting diseases from not taking timely meals are the evils of gambling." Again, "gamblers always play even at night by lamp-light, and even when the mother (of one of the players) is dead; the gambler exhibits temper when spoken to in times of trouble " (Arth. VIII. 3). Gamblers and keepers of gambling dens are sources of disorder to the state (Mbh. XII. 88. 14).

To maintain law and order, to check dissipation and deterioration of public morals, state regulation of gambling was called for. The state had further motives, the primary one of drawing a good revenue and accessory purposes like detection of crime. This means that it had its own gambling houses and that it levied from players a license fee, hire charge and share of the wins; it issued license to private dens for a heavy fee and tax on the owner; and it uprooted all unlicensed gambling with a firm hand.

According to the Mrcchakațika, gambling houses (tentaśāla) licensed by the state were a feature of big towns.

In the Arthasastra the state itself carries on a lucrative traffic and centralises gambling through a Superintendent (dyūtādhyakso dyūtam ekamukham kārayet). The Superintendent levies 5 per cent. of stakes won, hire for supplying dice and other accessories, fee for supplying water and accommodation and license fee (karmakraya, II. 20). Brhaspati approves gambling and bets on prize fights (samāhvava) with animals like birds, rams, deer, etc., because they serve the purpose of discovering threves (XXVI. 2f). "The keeper of the gambling house shall receive the stakes and pay the victorious gambler and the king; he shall also act as witness in a dispute, assisted by three other gamhlers " (tb. 8). Nārada has the same view on these institutions and adds that the keeper shall conduct the contests, pay the stakes won and get a profit of 10 per cent, on the wins (XVII. 1f; cf. Apas. II. 10. 25, 12f; Yāj, II, 199f). As for private-owned dens, since the king is entitled to a share, licensing is necessary (Nar. XVII. 7f; Yāj. II. 201, 203; Sukranīti, I. Vv. 603-608). Only Manu wants gambling (dyūta) and betting (samāhvaya) to be extinguished, root and branch, and the gambler hanished from the town (IX. 221-225).

7. Tatern-keeper

According to the Greeks the Indian diet was distinguished by the absence of wine which they took only in religious ceremonies; but rice beer was generally drunk (Str. XV. i. 709). The former part is borrowed from legal injunction or from those who observed it, the latter from a more popular practice. The drunkard (souda) appears in the city side by side with the gambler (Dn. XVII. i. 6, 29, 32) dissipating wealth with the attendant six dangers (XXXI. 71) and visiting the distiller or tavern-keeper (saundikāh, Rām. II. 83, 15; pānāgānika, Jāt. V. 13)

who prepares and caters a large variety of intoxicating liquors (sura-meraya-majja, Dn. XXXI. 7). The Arthaśästra enumerates a long list (II. 25). Viṣṇu knowsof thirteen, viz., that distilled frnm sugar; mādhvī wine, that from flour, mādhuka wine, that from molasses, from the fruits of the Tanka tree, of the jujuhe tree, of the datepalm, of bread-fruit tree, from wine grapes, mādhvīka wine, maireya wine and the sap of cocoanut tree (XXII. 821). According to Manu, surā is of three kinds-that distilled from molasses (gaudī), that distilled from ground rice, that distilled from madhuka (mahua) flowers (Kullūka) or from honey (Medhātithi) nr frnm flnwer, honey and grape (Nārāyana) (mādhvī, XI. 95). According to the same commentators, vāruņī is a apecial quality of gaudī and mādhvī (XI. 147). In popular parlance auch technical distinctions were not always phaserved and surā and rārmī appear as nf entirely different qualities. " A trader in spirits (vārunī-vaņijo) having prepared fiery spirits (tikhinā-vārunī) and selling them, having received gold suvannas, etc, a number of people being gathered together (at the shop), he went in the evening to hathe, bidding his apprentice (antevāsika) in these words: "My man, do you, having taken the price (mūlam), give the spirits" (Jāt. I.251). This shows the popularity and dearness of vārunī especially of the strong brand in comparison with the surā which

eould be bought for a copper coin (I. 350).

The tavern was not only the main attraction for the dissipation of the wealthier classes, it was the breeder of crimes and the favourite haunt of criminals (V. 13). Cut-throats and thieves, after finishing their operations indulge in drinking bouts (II. 417, 427). Two tipplers drug spirits to rob the drunkards (sāvatthiyam surādhuttā sannipatitvā mantayinsu, I. 269). With the gambling house, the

¹ See the redering by Mrs. Rhys. Davids in J. R. A. S., 1991, pp. 8761 fg, as of posed to Chalmers* in the Cambridge Edn.

hrewery appears as a centre of civil disorder (Mhh. XII. 88. 14). Hence sale of liquor is among disreputable professions (295. 5f) and the seller is to be banished by the king from his town (Mann, IX. 225).

As a matter of fact such stern measures were very rarely taken. For like the gambling house, the tavern vielded profit and could be similarly used as a tool for espionage. The village lord who mourns the loss to his perquisites by the abstemious habits of his folk (Jat. I. 199) may well have taken his cue from the state, and the other who forbids the sale of liquor in his village was a rare one in his class as examplar of Buddhist piety (IV. 115). All the state (or its agents and parallels) did was to restrict or monopolise the traffie. In the Arthasastra the state itself is the biggest wine merchant. Others earrying on the trade laye to obtain license and pay a heavy toll. Drinking is strictly regulated and is not allowed outside the booths which are set up at big intervals. State shops also serve as auxiliary to the espionage system (II.25). According to the Sukranīti the drinking house has to obtain king's license (I, v. 604).

8. Brothel-keeper

With the brewery, the brothel was in happy company with its brood of crimes and criminals (Mbh. XII. 88. 14). The pimp (strīvyavahārī) trading with the virtues of woman (Arth. II. 27; kuṇḍārī, Mbh. XIII. 90. 7) and keeper of dancing girls (vaidehaka, rangastrījīvī, Mbh. XII. 37. 31) thrived eminently as parasite professions spreading crime and disease, bringing income to the state and serving as agents of the police.

9. Prostitute

The prostitute was the nadir of the underworld in whom all the vices and vicious institutions converged. She might

belong to different series recording as she was the nagarasobhanā or ganīka or as she was a vannadāsī (Jat II 367ff) The former was the chief courtesn, literally 'the beauty of the town,' surrounded by a retinue of harlots in her establishment (Sulasa nāmn nagarasobhīni paūcasata vannadasi printuriahosi, III 435) The courtesan Kali had a similar retinue (IV. 248) Ambapālīka of Vesali and Salavati of Rajagība helonged to this rank (Mv VIII 13) The 500 vannadasis and the 16,000 dancing gils (solasahassa nitahitlinjo) in the king's suite (III 365, V 190, 486) were of the same plebeian category The Arthrásatir classifies ganīkas into those attached to royal court and public prostitutes (II 27)

The eustomary fee for the chief courtesan of the town is 1,000 kahapanas for a visit or a night (III 59, 485, 475, IV 248) The Arthasastra fixes 1,000 panas as the salary of the chief courtesan in king's service, probably per mensem But this is only a conventional sum Ambapalika charges 50 for one night and Salavati 100 (Mv VIII 1,8), we do not know whether in silver, gold or copper pieces At the hottom of the scale, the lowest fee was a piece of betel (tambulamattam, II 309, 379)

Further glimpse is obtained from the Jitahas, into the customs, manners and morals of the ill-fumous houses. The fashion in the quarter of Kali was that out of the 1,000 pieces received, 500 were for the women, 500 the hire charge of clothes, perfumes and garlands. The visitors received and put on garments for the mght, the next day donued their own and went any

Tasmim pana ganikaghare idam carittam ahhatam sahassato, panca satani ganikaya honti, panca satani vatthagandhamalamulam honti, agatapurisa tasmim ghare laddhavatthani mvasetva rattim vasitva punadivise gacchanti abbatavatthan eva mvasetva gacchanti IV 249

Another is very strict about her fees. A merchant's son spends on her 80 crores of money, yet one day when he comes empty handed he is cast ont by the neck (III 475) On the other hand the prostitute had her own codes of professional morality Her code of honour dictates that after receiving contract from a suitor, she must not go with another for any offer A prostitute, true to this standard, is an exemplar of Kuru piety and enunciates this in accordance with the ethics of her profession (II 379) Another had fallen from hetter days because the lesson was lost upon her "She used formerly to take a price from the hand of one not to go with another until she had made him enjoy his money's worth, and that is how she used to receive much Now she has changed her manner and without leave of the first she goes with the last, so that she receives nothing, and none seeks after her If she keeps to her old custom, it will be as it was hefore *

Sa grinka pulibe ekassa hatthito bhatim grhetvi tam ajirapetva aninssi hatthato na ganhati, ten' issi pulibe bahim npajji idani pann attano dhammatam vissajjetvi ekassa hatthato ganhati, purimassa okisam akatvi paechimassa karoti, ten' assa bhati na uppajjati, ni keci nim npasamkamanti, sice attano dhimnie thissiti public sidisi va bhivissati, II 309

In certain passages, a prostitute's profession appears as the meanest of vocations. One of the class wails alorm in again pataliputte ganila impupativiting antimativita (Mil 122). Sama knows that inspite of her rate of 1,000 she is hated for her vile trade (makammam, Jat III 60). But these give a partial view of the social psychology. The reputation of Videba was as much in its 16,000 girls as in its 16,000 villages and storenoises (III 365, V 190). The chief courtesan was the pride of the city, the focus

of its aesthetics, as Sulasā was of Bārānasi, Ambapālikā was of Vesāli and Sālavati was of Rājagaha.

"There was also the courtesan Ambapālikā who was beautiful, graceful, pleasant, gifted with the highest beauty of complexion, well-versed in dancing, singing and luteplaying, much visited by desirous people. She asked 50 for one night Through her Vesāh became more and more flourishing"

Ambapālikā ganikā abbirūpā boti dassanījā pāsādikā paramāja vannapokkharatāja samannāgatā padakkbimā nacce ca gite ca vādite ca abbisaţā attbikānam manussānam paūfiasāja ca rattim gacchati tāya ca vesālī bhijjosomattāja uposobbati. Mv. VIII. 1.

Finding Rajagaha outdone by Vesāli Senija Bimbisāra installed a heautiful and accomphshed girl Sālavati as courtesan, through whom Rājagaha gradually flourished. She charged 100 for one night (ib. 3). The chief courtesan of the state, according to the Arthasāstra, is selected with sole consideration to heauty and accomplishments and she is trained up to all the artistic and musical proficiencies (II 27).

Of course the state was interested in the traffic. It had use both for the glamorous nymph and for the street girl. They attracted rich men and, with them, business and prosperity. They were employed for sundry purposes. The king of Anga enticed the young recluse Rsyaśrnga by means of a troupe of courtesans (Rām. I. 11). They formed an important part in the ceremonials. The ganikas along with ministrels and instrument players are to go out and receive Rima on his retirm from exile (VI. 129 3). "They shall pay every month twice the amount of a day's earning to the government" Above all they are the most effective agents of the secret police (Arth. II. 27).

¹ The general of the Artha astra and the Kamaiastra resembles very much the Japanese Genths, the cultured secrety gril trained in the arts of entertainment.

Such was the vicions circle of outlaws and undesirables of society, the gūdhājīvīs who are to he suppressed with fines, banishment, espionage and torture (Arth. IV. 5. 6. 8). The handit, the cut-throat, the swindler, the gambler and the debauch were hedfellows of the underworld and their rendezvous were the tayern, the brothel and the gambling den. The oft-quoted trio-wine, women and dice-were centres of crime and civil disorder (Sut. 106; Rām. II. 70. 41; Mbb. III. 13. 7; XII. 59. 60; 88. 14: 93, 17). The civil authority took little pains to wipe out these plague-spots. While crimes of violence (sabasa) were dealt with a ruthless application of lex talionis, crimes of immorality were connived at for the sake of revenue and the vicious purposes of an unscrupulous secret service. The state had yet to learn the chaplain's maxim that crime cannot be controlled by taxation and torture and that institutions thriving upon public immorality undermine the basic fabric of the state

-Bālapaṇḍitasutta, Majjhima-nikāya-

A fool, should he become a human heing after the lapse of a very long time, he comes into one of the low stocks candalas, nesadas, venaa, rathakaras and pukkusas, he is reborn to a life of vagrancy, want and penury, scarce getting food and drink for his atomach or clothes to his hack. He grows up ill-favoured and unsightly, misshappen, a weakling, blind or deformed, or lame or a cripple; he gets no food, drink and clothes, nor carriage, garlands, seents and perfumes : he misconducts himself in act, word and

thought; his misconduct brings him at the hody's dissolution after death to a state of misery and wee or to purgatory..... A wise man, should he become a human being after the lapse of a very long time, he comes into one of the high stocks.-Kbattiyas. Brahmanas or Gahapatis, he is reborn to a life of affluence, riches and wealth with ahundance of gold and coins of silver, and with abounding substance and abounding possessions. He grows up well-favoured and well-looking, with lovliest complexion, with plenty of food and drink and clothes and carriages and garlands and seents and perfumes; he conducts himself aright in act, word and thought and his right conduct brings him at the body's dissolution after death to well-being and satisfaction in heaven.

CHAPTER I

SLAVE LABOUR

Origin: Prisoner of war. Inherited. Born. Purchased. Gife. Mortgaged. Judicial punishment. Apostato. For food. Debtor. Voluntary. By wager. Orowth of slavery. Manumission.

Functions: Personal attendance. Domestic service. Industrial establishments Working for hire. Prostitution of female alayes.

Code of relation Legal position Social position

Actual treatment: Chain and whip, 'Slave's fare,' Run-away alave, Freed alave,
The slave and the alave class. The Arya alave and the Sudra alave, Indion and
Western alaverr.

'Dasa,' the Indian word for a slave is used in the Reveda synonymously with 'dasyn' in Origin. the sense of enemies of the Arvans (V. 34. 6; VI, 22, 10; 33, 3; 60, 6; VII, 83, 1; Av, V, 11,3). The dasavarna (Rv. I. 101. 1; 130.8; II. 12.4; 20.7; IV. 16, 13; VI. 47, 21; VII, 5, 3) and arvavarna (III, 34, 9) allude to the aborigines and the Aryan invaders with reference to their respective complexions.' The difference in religion between the two sets of people is also very frequently noted (I. 33, 4f; IV. 16. 9; V. 7. 10; 42, 9; VI. 14. 3; VIII. 70.10; X. 22. 7f). These conquered ahoriginals must have often been reduced to slavery and hence the new application of the word 'dasa' in the sense of a slave (VII. 86.7; VIII. 56. 3; X. 62. 10; Av. IV. 9. 8; Ch. Up. VII. 24. 2). In the Atharvaveda ' dasi' is used in this sense (V. 22. 6; XII. 3, 13; 4.9; Ch. Up. V. 13.2; Br. Up. VI. 1.10). "Aboriginal women no

¹ This is cometimes directly mentioned. "Erspa tvac,"—Rv. I, 130 8; IX. 41.1; 'svinys,"—I 100, 18; 'aboratra 'as analogous to 'füdraryau,' not of course in direct order—Vaj. Esm. XXIV. 30. Cf. in the Majhima (93)—'d'eva vanna ayyo c'eva daso ca' in the Yoro and Kamboja countres.

doubt were the usual slaves, for on their husbands being slain in battle they would naturally have been taken as servants."

Thus in India, as elsewhere, slavery originated from the earliest laws of war. "The vanquished is the victor's slave—such is the law of war" (Mhh. IV. 33.59f). Those made captive under a standard are among the different types of slaves enumerated in Minu, the Aithasastra and Nārada (dhvajāhrta,—Manu, VIII. 415; Arth. III. 13; Nār, V. 27). Prisoners captured 10 raids are one of the three varieties known in the Vinaya-pitaka (karamarānito, BhikV-Sam. 1.2.1). In the Jātāhas brigands are seen harrying a border village and going off with their prisoners (coresu paccantagāman pabaritvā karamare gahetvā gacehantesu, III. 147; IV. 220). In the Mahāsutasoma Jātāka, Sutasoma is afraid that Brahmadatta of Benares would enslave the captured princes."

These people, if they happened to survive their master,

2 Inhelited did not recover their ficedom but were
banded down to the legitimate heir along
with other properties of the master. This is another variety
of slave noticed hy the law-givers (paittha,—Manu; däyägata,—Artb., När.) and the practice is fully borue out by

other evidences.

The child born of a female slave in the bouse of a master became a slave to the same master.

This is alluded to as arbaya or udaradāsa

This is alluded to as gṛhaja or udaradāsa ın Manu, the Arthaśāstra and Nārada and as antojāto io

1 Macdonell and Keith Vedic Index, Vol I, p 337
2 In the same vein the Pandavas speak to the captive Jayadratha in the Vana

Among the four kinds of slaves commersted claewhere appear those driven by fear (blays panumaps Jat VI, 285) Perhaps in those times and places when and where aggression and burgandage were not uncommon, the weaker peop's occasionally sought a benevolent and powerful master for protection against "the laws of this purgle."

the Vinaya passage. Vidura the king's councillor enumerates this among the four kinds of slaves (amayadāsa,—Jāt. VI 285) and he himself is a specimen The Jātakas give other instances of 'home-horn' slaves (I. 452, VI. 110).

We came to a later stage of development when slaves could be purchased for money (krīta,— Manu, Arth, Nār.; dhanakktto,—Vin dhanena kita,—Jāt VI. 285). In the Jātakas 'satena kitadasa' is a stock phrase indicating that 100 hahāpanas is the conventional price of a slave (I 224, 209) 700 hahāpanas are "enough to huy slaves male and female 2" (alam me ettakam dhanam dāsidāsamulāya, III. 343).

Manu and Nărada recognise slavery by gift. In tho
Vessantara Jătaka an exiled prince gives
away his wife and clinklen to a suitor
(VI 646). Such pious demonstrations were undoubtedly
rare

According to the Arthaéastra and Nărada one could be pledged or mortgaged to slavery. The state of mortgage continued till the debt was cleared. Of course the sale, gift or mortgage was open only to the rightful owner of a person, i.e., to the master of a slave, to a liusband, to a father or to kinsmen of a nunor.

Perhaps a farther stage is revealed with enslavement by judicial punishment. This practice does not appear in the lists of Vinaya or of the Vidura-pandita Jātaka. Manu refers to it as 'dandadasa' and the Arthasāstra as 'because one cannot pay a debt or a fine.' The Arthasāstra lays down that a person enslaved by court decree

410 SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

shall earn that amount by work (dandapranītah karmanā dandamupanayet), i.e., the culprit must earn and pay by hard labour the fine he is sentenced to. It is not made clear in any of the twn passages whether this service is to he rendered to the state nr to the sufferer. This form of penal servitude was certainly temporary expiriog as soon as the fine or decree was worked nff. But in the Jātakas there are instances of 'hie sentence' too. In the Kulāvaka Jātaka a gāmabhojaka is reduced to slavery hy the king's decree for hringing malicious charges against his people (I. 200) In the Mahā-ummagga Jātaka the king comunites death-sentence of four mischievous councillors and condemns them to slavery (VI. 463).

them to slavery (VI. 463).

Nārāyana and Nandana extend the dandadāsa of sapostate.

Manu to include those who are sentenced to slavery for leaving a religious order.

Vișiu emphatically declares: "An apostate from religious mendicity shall become the king's slave" (V. 162).

According to Nārada such an apostate is never to be emancipated (V. 35; Yāj. II. 183). But we have no econcrete instances of such measures in the Jātalas.

Ohviously these pious rules were difficult to enforce and they reflect only a growing tendency against which the

Manu and Nārada specify slaves serving for food.

Nārada says that this type of slave is released on giving up the subsistence. But this being the condition his status differs very little from the labourer working for hire and paid with food (bhataka). Apparently the status of slavery was sometimes preferred by a pauper to that a hireling whose positio, it will be seen, was sometimes worse than that of his brethren.

It is clear that as want and starvation became acute, people sold their freedom for maintenance. Narada's list

accordingly includes one taking to bondage for food in time of famine.

From Nārada it appears that a debtor might have had to serve his creditor as slave until the payment of the debt with interest (V. 33). Theri Isidāsī, horn as daughter of a poor carter, heavily encumbered with debts, was carried off as slave by a merchant in lieu of interest.

kapanambi appabboge dhanikapurisapātahalulambi¹ 443 tam mam tato satthavābo ussannāya vipulāya vaddhiyā² okaḍḍhati vilapantiṃ acchinditvā kulagharassa 444

-Therigatha

From the commentatorial note on 'dandadāsa' in Manu it appears that this service might also be exacted in lieu of a debt (also Mbh. XII. 109. 18).

Voluntary enslavement is noticed in the Arthasastra (sakrdātmādhatā) and in Nārada. It is referred to also in the Sumangala Vilāsinī (I. 168) and in the Vidura-paṇdita Jātaka (sayam pi upayanti dāsa). The motives of such self-degradation might be manifold. It might be done as penance (Jāt. VI. 87). It might be dooe to save somebody else's life or freedom (VI. 135). Evidently such cases were rare.

'Won through wager' is another kind of slave in Nārada. In the Majjhima nīkāya there is a passage which says that a gambler by throwing a low cast with the dice loses son, wife, all his possessions and finally goes himself into bondage (129). One is immediately reminded of the classic (but by no means solitary) instance of Draupadī in the notorious dice contest in the Mahāhhārata (cf. I. 16, 20).

¹ յոնցրենսոր purisauam adhipatauabahule hahübi ըրդյեսի abhibhavitabbe Paramatihadipant,

¹ mavaddhiya Ibid

and fetch the fan and how he would minister to the master when he retired (I. 453). Among the 'impure work' which is reserved for slaves according to Nārada is 'rubbing the master's limbs when desired' (V. 7). They served also as bathing attendants (ib. 6; Arth. III. 13; Jāt. I. 383).

Apart from personal attendance, the domestic slave did all other menial work of the bousehold. A very common function of a female slave is pounding and winnowing of rice (1. 248; II. 428; III. 350) and spreading out the rice in the sun (I. 484). He or she is also seen clearing the leavings of food (Nār. V. 6; Jāt. IV. 145); sweeping the yards and stables (Nār. V. 5; Jāt. VI. 188); cleansing the bathing tank (Jāt. I. 484);

tching water (V. 284, 412); going on errands (I. 350).

Generally female slaves were maintained for domestic made trail and Agri. work. All the cases cited above except

enitoral establishmants

Kaṭāhaka (and Jāt. I. 350) were women (also Mn. 82). For outdoor work men

were employed. The king's slaves served in the industrial and agricultural establishments of the state (Arth. II. 24) or fought in his array (Rām. II. 84.7; Jāt. V. 412); private slaves plied in the big and small agricultural estate and industrial enterprise.

The institution of slavery was not as innocent as it would appear from the functions of a slave ennmerated above. In the Nāma-siddbi Jātaka is a scene of a master and a mistress beating their slave for she bad not brought home her wages (ckam dāsim bhatim adadamānam, I. 402). It would appear that the master might let out the services of the slave on hire and thus make a profitable business out of him or her, since the slave had no right to earn and own property. In the paccupannazatihu of the Māmsa Jātaka even the slaves of thiskhus go to town to get dainty fare for their sick masters (III. 49).

Another evil feature was that the female slaves were very often kept for enjoyment, avowed or Prostrtution of surreptitious. Sometimes it is difficult to iemale slaves demareate them from prostitutes and concubines. In the primitive concepts of social ethics this was the natural destiny for the wives and daughters of one slain in battle or made captive in war. Instances of slave women bearing child to their masters come from the later Vedic literature down to the Arthasastra and the Jatakas (Art. Br. II. 19: Kans. Br. XII. 3: Arth. III. 13: Jat. IV. 145, 299). The king's female slaves are to serve as bath. room attendants, shampooers, bedding room servants. washer-women and flower garland-makers (snapakasamrāhak'-āstaraka-rajaka-mālākarakarma dasyah kuryuh, Arth. I. 21). Prostitutes and female slaves incapable of providing enjoyment to king (bhsgnabhogā) are to be employed in the stores or kitchen. Female slaves are trained along with royal prostitutes in the arts of entertainment and femmine wiles (II. 27). In the public taverns it was not an extraordinary spectacle to find a dasi with blooming youth and beauty (pesalarupa) lying in intoxication with her master (II. 25). This was the natural social consequence emerging out of the maintenance of large number of women slaves within the household?

The code of treatment of a slave by a master and of reciprocal duties and relations as formulated in didactic pieces is fairly enlightened and high. In the words of Buddha Code of treatment slaves and servants form the nadir (hetthimā disā) among the six quarters that the Aryan master has to protect; and (1) he assigns

¹ It might of course happen, elthough very rarely, that a master gives the status of wife or daughter in law to his female slave (Amba Pr Com. IV. 12; Thoring, 446) On the treerse the Jatekas lumish instances of the master's wife and daughter falling in love with or nearrying their male slave.

them work according to their strength (yathāhalam kammanta-samvidhanena), (2) supplies them with food and wages (hhatta-vetanānuppadānena), (3) tends them in sickness (gilanu patthanena), (4) shares with them unusual delicacies (acchariyānam rasānam samyibhāgena), (5) grants leave at times (samaye vossaggena).1 The slaves and workmen respond to such good ministration in five ways: (1) they risc hefore him, (2) they lie down to rest after him. (3) they are content with what is given to them, (4) they do their work well, (5) they carry about his praise and good fame. (Dn. XXXI. 27). Asoka exhorts the proper treatment of slaves and birelings along with friends and relatives as consonant with dhamma (R. E. XIII). According to Manu, the master's duty is to give funeral pinda to the sonless slaves and to maintain them when old and weak. The Sūdra, on the other hand, must never leave his master whatever may be his sufferings. He should maintain his master besides his own family when the latter suffers a loss of wealth (dravya-parikşaye, XII. 60. 35f). He stands in respectable company with parents, brother, children, daughterin-law and female relatives of his master with whom a Snātaka should never have quarrels (IV. 180). A slave is as one's shadow whose offence the master should bear without resentment as of his brother, wife, son and daughter (IV. 1841). According to the Arthasastra those who do not heed the claims of their slaves, hirelings and relatives shall he taugnt their duty (II. 1).

The fundamental fact of the legal position of the slave was his complete loss of persona. He was the master's chattel as much as oxen, buffaloes, gold and silver (Jāt. I. 341), or as oxen, gold, garments, sandāl-wood, horses, treasures, jewels, etc. (V. 223). The master had the right to recover him if he ran

Constant relaxation so that they need not work all day, and apecial leare with exits food and adornment for festivals, etc.—Buddhaghora, Cf. Jat III. 435.

away (I. 451, 458) or disposed himself to another master (Nar. V. 40). He had the right to make a bequest of him to another (Jat. VI. 138). He was just as Vidura, the councillor, describes himself.: "I am a slave from my birth: my weal and woe come from the king, I am the king's slave even if I go to another, he may give me by right to thee. "

> Addhā pi vonito abam pi jāto bhavo ca rañño abhavo ca rañño dās'abam devassa param pi gantyā dhammena mam manaya tuyham dajia ti.

As will be seen below the master could take the life of his slave with impunity.

A slave can bave no property (Manu, XII. 60. 87; VIII. 416f), i.e., he cannot earn money by working for others (adhıgaccbantı parakarma-karanadina,-Narayana). Whatever he earns belongs to his master (Mbb. I. 82. 22ff; V. 33, 68; Nar. V. 41). The doors of the Samgha were closed to bim (Mv. I. 46). He could not enter an agreement unless authorised (Arth. III. 1). He could not stand as witness except in case of failure of qualified witnesses (Manu, VIII. 66, 70).

These legal disabilities do not discord with the idealised relation between a master and a slave out-Bocial disabilities lined above which ignores any right on hehalf of the slave. Nor does his inferior social status. In Manu and in the Santiparva (242, 20) he appears as an integral part of the master's family, 1 deserving of treatment similar to the members of the household. If a slave sometimes figures in the less respectable company of cows. mares, she-camels, she-buffaloes, she-goats and ewes (of which the issue belongs to the owner of the mother,-Manu.

IX. 48; cf. Jat. I. 341; V. 223), this is no paradox. For the magna familia of the Arvan householder embraced within its fold these domestic animals as much as the slaves. Animals had as much claim to kind treatment as slaves (Aśoka's R. E. XIII) and neither had the social status of the other members of the family. This is shown in ebaraeteristie fashion in the Nanaechanda Jataka. Punna, the female slave is offered a boon along with the master, the

mistress, the son and the daughter-in-law. While they ask

for a village, 100 mileh cows, a ear and ornaments, she for a pestle, a mortar and a winnowing basket (II. 428). This Punna receives from her master the epithet-'jammi,' meaning 'the low, contemptible.' 'Thou wilt bea slave,2 is a serious form of eurse (Mhb. I. 16, 19ff). Dāsipulla is a universal term of abuse (Jat. I. 225; III. 233; IV.41). King Vidudahha is insulted as the 'son of a slave girl' even by a slave woman (IV. 145). Children of slave-girls by their masters did not get over this stigma.1 Mahānāma the Sākya cannot dine with his daughter Vāsavakhattiyā hy the slave Nagamunda. Bodhisatta, as king's chaplain, disports with a slave-girl, but cannot give his family name

The legal and social position of the slave being what it was, his habitual lot was not to be petted and fondled like

to the hastard horn to him (IV. 298).

a foster child. The slave Katabaka learnt Treatment : chain and writing with his master and "two or

three handictrafts (vohāre) and grew up to be a fair-spoken and handsome youngman ' (vacanakusalo yuvā abhirūpo aliosi). Brought up in the refinements of his master's house, he could successfully pose abroad as his master's son. With a master like Bodhisatta such treatment is intelligible, but even with such a master, the slave could not escape the fear that "at the slightest fault

¹ Ait. Br. II. 12; Kany. Br. X1f. 8

he shall be beaten, chained, branded and fed in slave's fare " (tālitvā handhitvā lakkhanena anketvā dāsaparihhogena pi parihhunjissanti, I. 451). It is wonderful that Mrs. Rhys Davids finds only two instances of actual illtreatment in Buddhist literature, 1 the one where a slave tires the temper of her mistress by persistent late-rising and is struck in the head with a lynchpin causing bleeding (Mn. 21); the other where a girl is heaten with rope by her master and mistress for not bringing home her wages (Jat. I. 402 f). In Buddha's discourse slaves and servants are said to be obeying the inhuman orders of a king harried by stripes and fears (dandatajjitā bhayatajjitā, Mn. 51; Sn. I. 75). "Men acquire men as slaves and hy heating. binding and by otherwise subjugating them make them work day and night. These people are not ignorant of the pain that is caused by beating and chains."

> Mānuṣā mānuṣāneva dāsabhāvena bhuñjati Vadhabandha nirodhena kārayanti divāniśam Ātmanaścāpi jānāti yadduhkbam vadhabandhane, Mhb. XII. 261. 38f.

The cruel master in the Vessantara Jātaka ties the hands of the boy and the girl with a creeper and holding it tight heats them and drives them on. "Where he struck them the skin was cut, the blood ran, when struck, they staggered against each other back to hack" 2 (VI. 546f). In the Rajjumāla-vimāna (Vimānavatthu) occurs the doleful sketch of a maid-servant who was abused right and left and when she grew up, had a liheral deal of hlows and fisticuffs. She was taken by the hair for slaps and kicks. She tried to escape with a shave hut it made her lot worse. The mistress was aronsed at her tonsured poll.

¹ Camb His , Ch VIII, p 205

There is a perceptible element of exaggeration to make a perfect villain of the Brahmana and demonstrate the piety and fortifude of the prince who is a Bodhisatta.

elass which served as drudge to the higher orders. In this

The slave and the slave class Trys and Sudra slave.

light is to be read the injunction of Manu that a Sūdra, even if set free, is not released from servitude—" for who can take away that which is inhorn in him?"

take away that which is inhorn in him?" (VIII. 4-14). This also explains the two sets of rules, secmingly contradictory, in the Dharmasastras and in the Arthaśāstra. Those very 'impure works ' (sweeping ordure, urine, leavings of food; attending to the master while naked), which Nārada assigns to a slave, are prohibited for him in the Arthasastra. While Manu and Narada countenance no rights of property for a slave, the Arthaéastra allows him to earn, own and inherit property. Even after his death, his kinsmen have the priority of claim on his property over the the master. Sale and mortgage into slavery are laid under severe stricture. Chastity of a female slave is meticulously guarded not only against the master but against roysl officers and every dehauch with heavy fine and violation entitles her to freedom (i.e., forfeiture of value on the part of the master, -mūlyanāśa).

While Manu declares that a Sūdra is not released from servitude by being set free, the Arthaśāstra rules that an Ārya does not lose his birth-night (āryahhāva) even if enslaved. If it is true that in the latier the Sūdra is not a distinctly separated category from the Ārya as in the former but a part of it, that only indicates that the Sūdra of the Arthaśāstra is not the same class as the Sūdra of Mauu. It is remarkahle that the liheral rules of the Arthaśāstra are confined to the one and the main chapter (dāsakalpa) and its cursory references elsewhere do not adhere to the same enlightened principles. These latter were applicable to large classes of people who stood between the horder lines of the Sūdra and Micceha groups, i.e., who were neither absorbed within nor kept in complete isolation from the Aryan social organism. The privilege accrued to the upper classes

degraded to slavery, the Aryas proper. The instance of the Vessantara Jātaka is a clear proof of this proposition. The prioce, who gives her daughter to slavery, puts a high price on her lest a low-born should pay it and 'break her birthright' (jātisambhedana kāreyya).

In the Arthaśāstra, the Mlecchas are expressly kept out of the privileges. The suggestion readily occurs that they formed the bulk of slavery. But certainly a Mleccha could not be put into a joh which brought him into personal contact with an Aryan master. It appears that Sūdras, i.e., the lowest of the Aryan fold or the aborigines who became an appendage to the Aryan system, supplied the mass of slave lahour, not the Mlecchas of whom even the sight and air were reprehensible, nor the upper orders who were occasionslly relegated by freaks of fortune. This is why in Manu and in the didactic episodes of the Epics, dāsa and sūdra go synonymously. This is why 'dāsa' is so often distinctly referred to as a jāti, i.e., a class by hirth and not a functional group.

The sctual condition and life of thus class, though not enviable, was better than that of the slaves of ancient Greece and Italy or of the late 'white plantations.' When Megasthenes said that the Indians do not employ of Western slavery slaves, he only brought forth this contrast. Unlike those countries again, the number of slaves in India, though large, was a fraction of the labouring class. The work of degrading manual labour was shared between the slave, the free hired labourer and a host of Miecchas and hinaitis. Hence in India the basis of economic life was not slavery and the Eastern analogy of the slave of Rome and Sparta in all-round exploitation was not the dasa but the last of the classes mentioned above.

CHAPTER II

HIRED LABOUR

Free Labour —agravithmal and pastoral; industrial, mercantile; dometic, miscellancous Origin in pappersam Modes of payment. Degradation and deviation of labour Wage and Profit rates Free contract? Terms of hire State labour and hirad labour The Labourer and the Outcast Panoity of labour nurest

In the scale of economic gradation the bired labourer stood just below the slave. Leaving aside the better artisans who were more or less organised in guilds and bad the instruments of collective bargaining to secure good terms of agreement, the unskilled 'hands' are found distributed in five categories.

While the small farmer carried on agricultural operations single-handed or with the co-operation of the fsmily, a remarkable division of agricultural labour and employment of operatives in large

numbers is noticeable in the hig estates of solvent landowners. In the Pali literature they are seen working in diminutive gangs under big merchants and farmers, such as for example under the cattle-magnate Dhaniya of the Suttanipāta (I. 2. Com.) and the agriculturist Kāsi-bhāradvāja in the same work (I. 4; cf. Sn. I. 171; Jāt. IV. 276). The Sākya and the Koliya clans appear in the paccupannavathu of the Kunāla Jātaka as working their estates jointly by means of a horde of dāsas and kammakaras—bondsmen who had no standing in the corporate body bolding a position akin to serfs and villains of feudal society (V. 412).¹ The mass of slaves and bired labour in agricultural work were employed separately for

tillage, field-watching, harvesting, tending and grazing cattle and for dairy production. There were professional ploughmen (kasim katvā jīvikam kappeotassa, Jāt. II. 165; bhatim vā kasim vā katvā laddhavibhavāourūpena yagubhattādini sampādetvā pitaram posesi, IV. 43); field-watchers who had huts built close by the field and had their meals there and dwelt there day and night (Jāt. III. 52; IV. 276; Sn. IV. 195f); and even winnowers of grain available for hire.

Hired lahour appears side by side with slave lahour also in spinning, weaving or other manufactures whether iu state establishments or with private owners. Instances of the former are furnished in the Arthaśästra (II. 23). In a Jātaka story we come across a tailor in the employ of a merchant (setthim oissāya vasantassa tuonakārassa tunnakammena jīvissāma, Jāt. IV. 38).

The slavo and hireling were employed in mercantile and marine labour to hawk the wares of the master or to a. Mercantile Labour.

serve in the deck. A rich Brāhmaṇa sails to Suvaṇṇabhumi with merchandise and slaves and servants (dāsakammakarā) to multiply his wealth (IV. 15); Mittavindaka hires himself out as drudge in a vessel voyaging on deep sea (I. 239; II. 103). In the Milindapañho, a deck lahourer in a sea-going vessel thioks in the vein "I am a wage-carner serving in this ship aod get my food and wages herchy (bhatako ahaṃ, imāya nāvāya kamnam karoni, imāyāhaṃ nāvāya vāhasā bhattavetaoaṃ labhāmi, p. 379)."

The bired man served in menial household work along with the slave in the house of rich merchants and land-owners (Jāt. III. 129). Besides these, were sundry job-seekers without any fixed employment who stood between vagrancy and starvation, who eked out a miserable existence by any chance engagement, whose services might

54-1865B

be requisitioned for a month, fortuight, or eveu a day (V_f. XVI. 9) and who sometimes offered themselves for a particular work apparently with many masters at a time, e.g., the water-carriers (pānīyahārakā) who rear up a street dog (Jāt. II. 246), the water-carrier of the Ganigamia Jātaka (bhatiko udakabhatim katvā) of whom we shall know more anon and Pinguttara and his associates who clean the road for the king going to disport in the park (VI. 348).

The advent of the new lahouring class after the slaves is obviously due to economic depression. The origin of slavery was in the right of the strong over Origin in Pauperism the weak .- of hired lahour in want and penury. It is only as late as in Pānini that we come across this parvenu (vetana, vaitanika, IV. 4, 12). The rules of the Arthasastra and of the Dharmasastras are an illuminating commentary on the scanty data of the Pali canon and they lead to the unmistakable inference (despite the contrary opiniou held in certain authoritative quarters') that living was not easy for all, that want and plenty prevailed side by side and that although people held it degrading to work for hire, the number of persons reduced to such straits was by no means small. There must have heen a wide prevalence of pauperism when want and starvation became a factor impelling people to sell themselves to slavery (bhaktadāsa, Manu, XVIII. 415). This same factor explains why inspite of the degradation of hired labout to a lower economic status, its ranks were swelled by perpetual supply from the landless and the destitute.

The wage-carner was commonly paid in money but he night be paid also in food or in both (Arth. II. 24; Vr. Nodes of payment XVI. 13; Jūt. IV. 43). Other curious mediums of payment are also mentioned in the Jūtakas. In the higher courses of learning the pupils

are admitted by teachers for an honorarium or for personal attendance and hetween the two discrimination is made in favour of the former:

dhammanteväsikä divä äcariyassa kammam katvä rattim sippam ugganhanti, äcariyabbägadäyakä gehe jetthaputtä viya hutvä sippam eva ugganhanti. II. 278.

Veda never told his pupils to perform any work or to obey imphcitly his own behests; "for having himself experienced much woe while abiding in the family of his preceptor, he liked not to treat them with severity."

duhkhāhhijūo hi gurukulavāsasya šişyān parīklešena yojayitum neyesa, Mbh. I. 81.

A Brahmana youth serves a candāla as menial to acquire a charm (Jāt. IV. 200). A girl is taken to service for three years in a family for a scarlet robe (kusumbharattavatthena hhatım karomi, V. 212), and a wife is "obtained alter working for seven years in a house" (sattaaamvaccharāni ghare katvā laddhabhariyā, VI. 338). The worker in these cases receives a specified reward for which he has a fancy and accordingly lets his service unconditionally for a period demanded by the master.

Although the subjects of these illustrations must not be classed with ordinary hired labourers and although these illustrations fall outside the ordinary terms of service, they

Point uniformly to a low valuation of labour. In the popular stories the workers' normal diet is coarse rice-gruel (kummāsa-pinda, Jāt. III. 406) and it never pretends to anything above the yagubhatta. In the Mahāummagga Jātaka, a potter's hireling after a full day's work with clay and the wheel, "sat all clay-besincaied on a bundle of straw cating balls of barley-gnoat dipt in a little soup."

Mattikam āharitvā cakkam vattetvā mattikamakkhitasarīram palālapithake nisīdītvā mutthum muṭthim hatvā appasūpam yavahbattam bhunjamānam, VI.—372. Sutana cannot make hoth ends meet and thinks, "I get a masaka or a half-masaka for my wages and can haidly support my mother," and he ventures to meet a yakkha and certain death for a thousand pieces with which his mother may be provided (III 326). A pathetic humour pervades the story of the water-carrier who saved a half-māsaka in the city rampart and was so transported by the thought of spending it on a festive day together with another half-masaka sived by his water-carrier wife! that he cestatically ran singing league after lengue to fetch the treasure under scoreling sun rays, "in yellow clothes with a palm-leaf fastened to his ear." The linppy pair thus hudgeted their savings of one masaka "we will buy a garland with one pair of it, perfume with another, and strong drink with a third" (III 446)

The average duly income of the workman was, therefore, the smallest copper piece in currency which is far helow the living wage. Such pittanecs of wage are corroborated in the Arthasastra which fixes a pana and a quarter per mensem for agricultural lahourers and field watchers with provisions proportionate to the amount of work done (II 24). They are not always entitled to a square meal and sometimes the diet actually varies according to lahour. The sight of a hegging monk coming with full alms howl from his house inspires the thought in the settlir that if his dasas and hammaharas had got that food he could have more work out of them, and he sighs for the loss sustained (Jat III 300).

Not strictly according to law, for the two had only cohabited (kapanithry asinvisary kappes) A casual word gives a vivid glimpse into the his and contains the same of these people.

[?] Ie, 20 magakas a month, or 2/3 n draka per day Manu's rate is 1 pans o 16 macakas for the lowest menuls, (panss or 96 magal as for the highest plus 1 (VII 126) Thus the daily wages are 1/2 3 magal as with 1/80 drons of grain and clothing every 6 months clothing, after 6 months

Wages might be fixed or variable or they might be assessed at a fraction of the gain. In its regulations on textile labour, the Arthasastra lays down that wages are to

way according to the quality and quantity of the yarn produced; only artisans who

can turn out a given amount of work in a given time may be engaged on fixed wages (II. 23). Vrhaspati distinguishes between servants engaged on pay and servants engaged for a share of the gain (XVI. 8). But whatever the mode of payment, wages are uniformly of a low standard. The rates for share of profit are standardized by experts (kuśalah) at 1/10 of crop for the cultivator, of butter for the herdsman and of sale proceeds for the pedlar (Arth. III. 13: Yāi, II. 194: Nār. VI. 2. 3). This astonishingly inequitous rule is somewhat liberalised by Vrhaspati who entitles a cultivator's servant to 1/5 of the crop plus food and clothing or only 1/3 of the crop (XVI. 18). How labour was estimated in proportion to capital is best illustrated in the regulation of the Santiparva fixing only 1/7 of produce for the cultivator who horrows the seed from others, the same share being fixed for traders with others' capital (60. 25f). To revert to Narada's rule, "For tending 100 cows a heifer shall be given to the herdsman as wages every year, for tending 200 cows a milch cow shall be given to him annually and he shall he allowed to milk all the cows every eighth day '2 (VI. 10). In the Santiparva hc is allowed the milk of 1 cow for tending 6 kine and 1 pair for keeping 100 (60, 25). And these rates are hardly more lucrative than the profit rate when the grave responsibilities

¹ Cf. the present rate prevailing in the districts of Western Dengal where the landless cultivator (thet majur) gets between 1/3 and 1/10 of produce and the alerging landsoner the rest 1 in Bihar and Oriess the Jamus and halrada get 11 ars of coarse grain for one day's labour and 8 10 Auftahs of land with a little additional income to the harriesting reason. Cf slave the more laboral rule of the Arthelsfattre on behall of cultivators in crown-lands who obtain 1/1 or 1/5 of produce (1). 21)

of the berdsman tending his cattle in beast and robber-ridden forests are taken into account

A contract entered into before appointment between the employer and the employee on the wages and the terms of service is frequently dealt with by jurists and politicians This contract, freely agreed to between Free contract ? the parties so often propounded with zest, was no less a fiction than the freedom of contract insisted upon with eant by the anti-trade-unionists of the Victorian age and meant little less than terms dictated by the moneyed master to the destitute toiler with starvation staring in the face whose vocation required oo technical skill and who had no organisation like the sem and the gana and no leader like the jetthaka or pamükha to hargain for a higher pay and better working conditions Labour legislation of the Dharmas istras shows that public conscience was not alive to the fundamental locquity io distribution of wealth, because these protective laws were themselves derived from ancient tradition and current usage except for a thin humanitariao gloss which is less perceptible to popular literature reflecting actual cooditions of society The logunction that an "ill-coosidered and improper "agreement shall not be enforced is only a pious

The field-watcher was hable to a fine or compensation for any loss The watchman of the Sali-Terms of hire kedara Jataka to whom were delivered by a Brahmana farmer 500 karısas of land for a wage, 1s afraıd when the plot is ravaged by parrots, that " the Brahmana will have a price put on the rice and debit it from my account" (salım agghapetva mayham mam karıssatı, IV, 276 ff). Thus the hueling had responsibilities unlike the slave for any injury to his master's chattel or to the job

wish, and even if it was ever observed, the proper and staodard rate was enough by itself to make the small wage

earner chafe in life

undertaken. Any deficit out of the estimated output from the quaotity of raw materials supplied must be made good from the wages—so goes the rule of the Arthasastra on textile labour (sütrahrase vetanahrasah dravyasarat, 11. 23). If fines are remitted in special cases considering accident. disease, etc., the loss incurred by the employer must be compounded by extra work (ibid). Payment may be with-held if circumstances change since the employment and if workmanship is below the employer's satisfaction (deśakālātipātaoena karmanām anyathā karaņe vā na sakāma kıtamanumanyeta, III. 14; cf. Yāj. II. 195). For negli-gence of work a hired tiller or heidsman is to be flogged (Apast, II. 11. 28. 2f). A workman who abandons his work before the expiry of the term shall forfeit his whole wages and pay a fine of 100 panas to the king (Vis. V. 153f). He is responsible for the "implements of the nork and whatever else may have been entrusted to them for their business" (Nar. VI. 4). The herdsman is accountable for the damage done by cattle in others' fields (Gaut. XII. 20f; Manu, VIII. 240; Viş. XII. 20-26; Yāj. II. 162) and for loss of cattle through the depredation of thieves, robbers, wild beasts, reptiles, diseases and accidents unless he exerts himself timely to prevent the loss—a thing certainly not very easy to establish when the onus of proof remains on bim (Arth. II. 29; Apast. II. 11. 28. 6; Manu, VIII. 232; Yāj. II. 164; Nār. VI. 11-17).

The economic position and security of these unskilled hands who plied in big plantations or purveyed manual labour from door to door on a short term service was thus in many

respects worse than that of the slaves. In the Milmda the bhatikas are put among the most degraded sort of work-people while the dāsaputtas stand in best company (p. 331). These latter were at least well-fed like domestic animals In the Jātaka stories paid servants are not always admitted

And it is because this easte did not crystallise into a community and because it was numerically smaller than the superior eastes and smaller than the labour population of ancient Egypt, Greece and Rome, that it did not mature into an explosive material seething with perennial discontent under the superstructure of civilisation and material prosperity.

¹ Times have since changed. They are now as scattered, ill organised, digital and imporentied as absfore but their number has immensify multiplied. Tegelst with the index typic where tols are not improved with the successive tenancy law, they are rapidly growing into an organised meanes to the existing social order.

CHAPTER III

DESPISED CASTES AND RACES

The kingjats

I The Candala Origin Appearance Arta and professions corpse burner, executioner, bunter, mag cian disabilities General attack

IV The Vena Ethnico professional castea Status Craft

V The Rathakara Origin and degradation Craft chariot building, leather work States

The apasada or mixed castes Inferior races

Side by side with the four rannas constituted by Aryan invaders, the social physiognomy presents a host of despised tastes and professions represented by the aboriginal races going under the general brand of micecha or hinajati. Panini knows them as the class of autravasitas below the Sudras (2 4 10). The Pah literature picks up five of these pariah castes for constant mention. The Suttavibhanga Pacittiya enumerates them in contradistinction from the privileged estates of Brahmana and Khattiya hiov nāma jāti candalajati venajāti nesadajati pukkusajati esā hīnā nāma jati (II 2 1). These five appear associated in a conglomerate class of outcasts also in other passages (Mn 93, 96, 129, An II 85, Sn I 93, Pug. IV 19)

1 The Candala

In Indian tradition the candala has always been the byorgun word for subjection and contempt. The
earliest references are seen in the Yajurveda Samhitas and in the Upanicads. They show clearly

that the candala was a degraded caste but yield no particulars.1 Fick suggests that they were originally a tribal body.2 After the first Aryan invasion the conquerors and the conquered were divided into two broad social categories,āryavarna and dāsavarņa. Gradually the dāsavarņa or the defcated aboriginals yielded to numerous sub-castes or classes in a social hierarchy taking positions according to their loyalty to the victors and to the adoption of the foreign culture. Those who remained outside the Aryan social scheme were reduced to a medley of pariahs and under-dogs. Among these outcasts some were ethnic groups, held together by a common race (hinajāti) humiliated for their despicable callings. The candala was at the hottom of the ladder. The Brahmanical theory that he is the issue of a Sūdra husband and a Brāhmana wife reveals only a jealous attempt to preserve the purity of the stock against the growing menace of pratitoma marriage. If the children of these marriages did really sink down to the status of candalas, certainly that does not explain the origin of the caste and Fick's suggestion seems to be substantially correct.

That the candālas were aboriginal local tribes with their peculiar trades and professions and social customs crystallised later into a caste or community under the rigid isolation forced upon them by the Aryan or Aryanised society is gathered from the bulk of Pali evidences as well as Epic literature

The Rāmāyana depicts the candāla in the following strain: "with blue complexion, blue rohes dishevelled locks, garlanded from the crematory, anointed with ashes from the same and adorned with iron ornaments."

¹ Ch Up V 107; 24 4; Liv. Gr S , 1v 1 , Sam Gr S , n 12; vi 1, etc Vi; 1 eccvi Sim. xxx. 21; Tait Br. in. 4, 17, 1; Br. Up. 1v. I. 22.

nīlavastradharo nīlah parnso dhvastamūrddhaiah cityamālyāmgarāgasca āvasāhharano'hhavat (I. 58. 10f).

Manu also enjoins that the dress of the candala should consist of the garments of the dead and that black iron should be their ornament (X. 51).

In the Matanga Jataka he is described as " clad in a had under-garment of red colour round which a helt is tied: above this a dirty upper garment, an earthen pot in hand " -rattadupattam nivāsetvā kāyabandhanam bandhitvā pamsukulasamghātim pārupitvā mattikāpattam ādāva....(IV. 379).

Manu also adds that he is "distinguished by marks at the king's command" (X. 55) Medhātithi understands these as external marks such as "axes, adzes and so forth used for executing criminals and carried on the shoulder." Govindarāja explains these as "sticks and so forth," Nārāyana as "iron ornaments and peacock feathers and the like." But the more plausible is the explanation of Raghavananda. that they are to be branded on the forehead and on other parts of the body.

To the candalas were assigned certain despised professions befitting their rank which they had

1. Corpse-burner

Arts and Profest to pursue hereditarily. The Arthusastra fixes their habitat heside the crematorium (pāsanda-candālānām śmaśānānte vāsah.

II. 4). Manu (X. 51) and Visnu (XVI. 14) ordain that their clothes must be the mantles of the deceased. The occupation readily suggested by these injunctions is that of burning dead hodies. This was presumably not an independent profession but a compulsive service imposed on them by the state or society at large. Manu says: " In the daytime they may do the work assigned to them hy order of the king; the corpse of anyhody who has no relations they must carry out of the house-such is the standing rule" (X. 55). According to the commentary on the Sîlavîmamsa Jātaka a candula is engaged in removing corpses (chavachaddaka438 SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

candala, III 195) He is certainly the corpsc-humer (chavadahaka) who tops the list of despised professions in Milinda (p 331)

The cremation of unclaimed dead bodics and those of

criminals seem to be an associate function of the equally disreputable job of an executioner. Manu says "Criminals they shall kill according to the law, by order of the king, the clothes of the criminals, their beds or other ornamental articles they may keep to themselves "(X 56) Visus says "A candala must live by executing criminals sentenced to death" (XVI 11) In the Anusasanaparva his duty is that of the public executioner (48 11) In the Anthasastra it is laid down that "candala" is to function for whipping a transgressing woman in the centre of the village (III 3) and for diagging an attempting suicide with a rope along

the public road (IV 7) The idea of employing a candala for these purposes was to add an insult to the injury inflicted

on the culprit

The candala is sometimes seen also in the despised iôle of a bunter. In the Santiparva, Mahabharata he is an animal-trapper in a forest (138 23) and pursues his trade with a pack of dogs (138 114). In the Arthasastra occurs a parable which conveys that a candala usually profits by a fight between a dog and a pig (IX 2). Manu assigns only dogs and donkeys as their wealth (X 51). The profession of hunting is assigned to the caste known as nisada and the candala is not commonly seen in this rôle. This may have been an occasional or an additional calling. Or the term candala may have been

¹ Of a little skelch of the congeneral attano circticos pharasucca kaptika kasatos addra kka-puntamo rationalidano II 41 179) The car dalas cantomarily wear a gritud of ref flowers (34 III 30) Their draws and ornaments presumbly were not antiform succe, according to the Smytis they had them as they found them in cerpose brought for crammittee.

used in a more generic sense covering all pariahs and outeasts among whom the nisada or animal-killer was one. -This is the more probable explanation as we come across other occupations of a candala which do not fit in with a corpse carrier or an executioner. One is found to earn living by selling fruits out of season but it should be remembered that he is a Bodhisatta (Jat. IV. 200). Another is found mending old things (jinnapatisamkhāranam karoti, Jāt. V. 429). The phrase 'mūlavyasanavrttīnām' used in Manu with reference to the occupation of a Sopaka Candala is explained by Narayana and Nandana as those who live by digging roots, i.e., in order to sell them as medicine. The candāla may appear with begging tray in hand (kalopihattha, An. IV. 375). In a Jātaka story a king is reduced to candalahood under the fury of his oppressed subjects (VI. 156). Evidently not the candala easte but the general status of outcasts or degraded eastes is meant.

The analysis of the phrase 'candala-vamsa-dhopanam' which occurs in the Dighanikāya (I. i. 13) and in the

Cittasambhūta Jātaka is illuminating.

Rhys Davids renders it as 'acrobatic feats by candālas.' Rouse as 'the art of sweeping in the candāla breed' and Fiek as 'the art of blowing a Candāla flute.' The annotation of Buddhaghosa in the

ing in the candāla breed' and Fiek as 'the art of blowing a Candāla flute.' The annotation of Buddhaghosa in the Sumangalavilāsinī elarifies the cryptic expression. He treats the phrase as a compound of three separate things. 'Candāla' means 'ayoguļa-kīļā,'—a triek with an iron ball, 'vamsa' is 'venum ussāpetvā kīļaņam,' a trick with a bamboo pole (which is balaneed on the juggler's forehead or throat while at the other end his pupil is poised. Com. Sn. 168), 'dhopanam' is 'atthidhovanam.' Here the scholiast refers to a barbarian custom in a certain janapada where corpses were not burnt but buried and when decomposed, were dug out; the bones were washed and buried again with balms. The funeral rite was accompanied with drinking bouts and

gusty wailings.—He quotes a passage from the Anguttaranikāya (V. 216) where the custom called 'dhopanam' is said to be prevailing in Soutbern India and bilariously observed with feasting, dancing, singing aud merry-making. He adds significantly 'Idha ekacce pana indajālena attbidhovanam dhopanan ti vadanti."

Two things are apparent. Firstly, the custom certainly helongs to some ahoriginal tribes particularly inbabiting Southern India and presumably to the candālas. Secondly, 'dhopanam' is a conjuring trick of bone-washing also presumably practised hy candālas. The ball-trick and the pole-trick may he acrobatic feats or sleights of band. What is gathered is that the candālas practised various sorts of magical and acrobatic feats peculiar to their breed (caṇḍāla-kammam). They displayed their art in public shows or on roadside which brought a few coppers from sight-seers.

The reference in the Anguttaranikāya to the custom prevailing in 'southern districts' weakens the comment of Fick that "the candāla village placed in the Citta-Sambhūta Jātaka in front of the gate of Ujein and thus to the west of India, may have probably existed only in the imagination of the narrator who carried the narrow conditions of his home over the whole of India." There is nothing to show conclusively that the candāla caste was peculiar to the social organisation in Magadba and Vanga because their modern descendants are mostly located there and hecause Magadba and Videha are referred to by Manu as the land of mixed castes.

The candāla had to remain in strict isolation from civilised contact and at the bottom of the uncivilised society. "But (unlike all other castes) the residences of the candālas should he ontside the village"—so ordains Manu (X. 51). "Candālas must live ont of the town......In

this their condition is different (from and lower than that of the other mixed castes)"—so lays down Viṣṇu (XVI. 14). "Endued with a dreadful disposition, he must live in the outskirts of cities and towns" (Mbh. XIII. 48. 1). In the Jātakas the caṇḍālas are always seen living outside the city gate (bahinagare, IV. 376, 390; VI. 156) in villages and settlements entirely by themselves (mahācaṇḍālāgamako, IV. 200; caṇḍālagāma, IV. 376, 390; caṇḍālagāmako, IV. 56). Fa-hien and Yuan Chwang corroborate the fact that they lived outside the city in their own villages. The latter adds that when they at all entered the municipal area, they had to travel along the left side of the road.

Elaborate rules of contact fortified the social partition. First and foremost, the rules of the table. The Bramanas of Kasi who were thrown out of caste " having been made to taste the leavings of a Candala " Social segregation. (candalucchitthabbatta) for their life. retired in shame to the kingdom of Mejjha (mleccha) and lived with the king of that country (Jat. IV. 376ff). In Buddha's own words food earned by unlawful means "is like the leavings of a Candala";-the following Jataka story narrates how a Brāhmaņa takes the leavings of a candāla under pressure of hunger but later awakes to the disgrace done to his birth, clan and family, vomits out the food with blood and retires into the forest to die forlorn (II. 82 ff). The Smrtis probibit touching a candala by higher castes for which purification by bathing is necessary (Apas. II. i. 2. 8; Gant. XIV. 30; Manu, V. 85; Vas. XXIII. 33; Yaj. III. 30). Hence the wind and water that carry this contact is equally loathsome. Setaketu, the proud Brahmana pupil loathes the wind that brushes the body of a fellow candala pupil (Jat. III. 293). Another Brābmana in whose locks gets stuck a tooth-stick nibbled by a candala and carried by river current, reviles and curses the culprit and compels him to move and live downstream €6-1363H

their hirth and go to study at Taxila. Here again they are exposed by their dialect (candālahhāsā) and driven out with blows for their audacity of intruding into the knowledge which was the preserve of the upper classes. The story also demonstrates how complete the isolation was—the isolation imposed by all the ingenuity that the priesthood was capable of—"that in the midst of a population speaking an Aryan dialect they preserved even in linguistic matters their racial individuality."

Was there no mitigation for the candala? It is admitted that Sastra rules do not reflect truly tho actual conditions of acciety. But in this respect at least the popular stories of the Jatakas ahow that reality did not go very far from priestly theory. The few Jataka stories that afford casual relief should he taken with some discount for the subject therein is always a Bodhisatta. In one case he dares to kick a fellow Brāhmana pupil who is defeated in an academic dispute and the action is condoned by the teacher (III. 233). We have seen that the candala was not at all admitted to the courses of learning. Elsewhere he is served by a Brāhmana for a charm and the Bodhisatta motive comes out in the open when the latter loses it from denying his candala teacher out of shame. The fitting conclusion is the sermon hy a kiog that a teacher is always to he respected he he a Sudda, Candāla or Pukkusa (IV. 200 ff). In another story a candala who is maltreated by a merchant's daughter, lies down in fast for six days at the merchant's doors, ohtains the girl for wife and compels her to carry him on her back to his village (IV. 376).2 Every available testimony goes to show that the fellow would have heen flayed or lynched no less than a Negro who.would show the same temerity with a Yankee woman a few years ago.

¹ Fick : Op cit , p 205

The apology is expressly given.—"For the resolve of such a men (Bodhisatta)—so it is said, always succeeds."

In a discourse to the Brāhmaṇa Aggikabhāradvāja Gotama cites the instance of Mātaṅga, a caṇḍāla who reached the highest fame and went to the Brahmaloka while many high-bied Biāhmaṇas owing to their sinful deeds are blamed in this world and goes to hell after death. Hence not by birth is one a pariah or a Brāhmaṇa, by act one is a pariah or a Brāhmaṇa (Sut. V. 138. 142)

Na jaecā vasalo hoti Na jaecā hoti brābmaņo Kammanā vasalo hoti Kammanā hoti brābmaņo

But why had he to fall back upon the next world to vouchsafe reward or punishment? The brutal level to which these people were kept precluded any question of their admittance to the centres of learning and enlightenment. The platitudes of the Suttas go down before the lard facts revealed in the Jātaka stories. Of physical tyranny and economic subjection of class by class, history has abundant instances. But it is doubtful whether to the segregation and soul-killing device innovated by the Arya for a candāla there is any parallel.

II. The Pukkusa

Nothing can be definitely said about the origin or the origin of these people. Even their name is subjected to a wide range of variants. The Bṛhadāranyaka Upaniṣad has Paulkaka, the Maitrāyanī Saṃhitā spells as Puklaka or Pulkaka (1. 6. 11), the Vājasaneyi Saṃhitā as Paulkāsa (XXX. 17). The Arthaśāstra gives Pulkasa. In the Smṛtis they appear as Pukkasa while the Pali form is Pukkusa consistently. Like the caṇḍāla the pukhasa of the Smṛtis is a mixed

¹ Cf. Jataka, IV. 376ff.; Manu, IX. 14 48

caste, but opinions differ about his descent. The Arthaśāstra says that he is the issne of a nisāda on an ugra woman (III. 7), Manu (X. 18) and Bodhäyana (I. 8. 11), on a Sūdra woman. According to Viṣṇu (XVI. 5) and Vasiṣtha (XVIII. 5) he is born of a Kşatriya woman by a Vaisya father, according to Gautama (IV. 19), by a Sudra father.

Visnu ordains that the pulhasa must live by hunting (XVI. 9). Manu assigns him " catching Profession hunting and killing of animals living in holes" and sweeping along with two other mixed eastes, riz.,

heattrs and ugras (X. 49). In the Pali literature he appears in an altogother different iôle. The commentary on the Sīlavīmamsa Jātaka explains him as one living by removing flowers (pupphachaddaka-pukkusa, III. 195). The pupphachaddaka also appears in the Milinda in a circle of despised castes and professions (p. 331). In the Theragatha his occupation appears to be the removing of faded flowers from temples and palaces. Fick is thus led to state: "I don't heheve that the Pukkusas were a special professional class but a race that lived generally by hunting and only occasionally by dirty work, like cleaning temples and palaces." 1 Dhammapāla's commentary, however, throws more light on his functions. Thera Sunīta horn as a pupphachaddaha, earned his living as a street-sweeper, not making enough to kill his hunger. In early dawn he cleared the street of Rajagaha, collecting scraps, ruhhish and so on into heaps, and filling there with the haskets he carried on a yoke.

Whatever their origin and profession, one thing remains eertain,-that they were a despised race Social Status whose lot was almost as had as that of the candala. In the Brhadaranyaka Upanisad paulkasa

¹ Op cit , p 206 On the pukkusa Rhys Davids says in the Pali Dictioners .-" name of a (non-Aryan) tribe, hence designation of a low so-ral class, the members of which are said (in the Jatakaa, to carn their living by means of refuse-clearing "

is the name of a despised race of men along with the candala (IV. 3, 22). In Manu (XII, 55) and in the Yājūavalkya (III. 20) they are classed with candalas and various breeds of animals as creatures in whose wombs a Brahmanicide is born. In-the Annsasanaparva they are the progeny of the candalas, eat the flesh of asses, horses and elephants. and just like the candalas wear clothes procured by stripping human corpses and eat off broken earthenware (43, 24). In the Jatakas they are very commonly bracketted with the candulas. Like that of their bedfellows their sight was unseemly. Elder Sunīta plied bis trade in early dawn obviously to escape sight. When Buddha was approaching with his train, finding no place to hide in on the road, he placed his yoke in a bend of the wall and stood as if stuck to the wall. He speaks of himself in the Theragatha: "Of low family am I, I was poor and needy. Low was the work I did, namely that of removing faded flowers. I was despised by man, held in low esteem and reproved." 1

III. The Nesada

According to the Arthasüstra and the Dharmasüstras, on a südra woman. Fick groups him like the candāla and the pukkusa among the "ethnic cisics" held together by a common race. The derivation of the word (ni—down, sad—settle) indicates those who have

settled down, i.e., the settled aboriginals.\(^1\) As pointed out by Macdonell and Keith,\(^2\) this view of Weber is supported by the fact that the ritual of the Vi\(^1\)value is sarrifice requires a temporary residence with ni\(^1\)value day, for the ni\(^1\)value day who would permit an Aryan to reside temporarily amongst them, must have been partially amenable to Aryan influence. But the name appears in early Vedic literature also as a general term for the non-Aryan tribes outside the Aryan organisation like the \(^1\)value day and the \(^1\)value outside the Aryan organisation like the \(^1\)value day and the us\(^1\)day and the four castes (catu\(^1\)value varn\(^1\)h) and the us\(^1\)day and the \(^1\)commentator Mahidhara explains the word where it occurs in the V\(^1\)pasaneyi-Samhit\(^1\) as meaning a Bhill or Bhil (XVI. 27; cf. XXX. 8).

Apparently, the maddas like the candulas were originally a tribal group that lived mainly by hunting Caste or Profession? and fishing, the professions which represent the lowest stage of human culture. In India these bore the additional stigma of killing living beings.3 This stigms and the consequent isolation retarded racial admixture and these people retained their tribal characteristic within the Aryan structure. In the Pali and Sanskrit literature we hear not only of villages and settlements but also of states, kings and armies of nisadas. The legal definition of their origin however shows that the racial isolation gradually slackened under the stress of material circumstances. A Brāhmana youth adopts the occupation of a hunter when he cannot maintain himself by any other art and dwells in a border village or outside city gate (Jat. II. 200; VI. 170). Among the ten callings of a straying Brahmana appears the hunter's (IV. 361ff)

¹ Rhys Davids gives in Pali Dictionary 'one who lies in wait'
2 Veduc Index

Dusitah sarvsiokesu mesādatram gamisysti Pranatiputsmirato miraupkrošatam gatah,

The profession followed by the entire branch of a low race took the shape of a caste when it was reinforced by infiltration from higher caste-orders.

It is not to be supposed that the profession of animalkilling was confined to a specific tribe or Hunter par excellence. caste or that all those who took to it received the stamp of a specific caste-denomination called the nisada. Manu assigns slaughter of wild animals to the mixed castes of Medas. Andhras. Cuñcus and Madgus. of cave-dwelling animals to Pukkusns, Ksattrs and Ugras while reserving killing of fish to Nisadas (X. 48f). Elsewhere sparing animals is attributed as a supplementary occupation to the mixed caste of Sairandhra (X. 32). Megastbenes' fourth class of population consists of ahoriginal herdsmen and hunters-" those who alone are allowed to kill animals," representing a professional class rather than a tribal or caste group. What may be inferred is that these professions were pursued more or less by all aboriginals although the nisada tribes were hunters par excellence, so much so that a professional hunter came to be called a niṣāda in popular parlance whatever his tribal origin.

The strictly professional name as distinguished from the racial is 'luddaka' for hunter and 'kevatta' (Sans. kaivnrta) for the fisherman or boatman. In the Pali works we come across the rattakaluddako (Jūt. I. 208, 434; H. 113), the godhaluddako (I. 488; HI. 107), the tittiraluddako (III. 64), the migaluddako (II. 153; III. 49, 170, 185) according as the hunter or fowler specialised in stalking a particular beast or bird and purveyed its flesh. The kaivarta likewise seems to be n professional and not a tribal name. It does not appear in the Smṛti lists of mixed castes. According to the nomenclature of Manu the caste name corresponding to the fishing profession is mārgava or dāsa begotten by

a niṣāda on an āyogava woman (another mixed caste) and "subsisting by working as a hoatman whom the inhabitants of Āryāvarta call a kawarta 2' (X. 34). The niṣāda king Guha is seen ready with his fiotilla of 500 boats and bundreds of kaivarta soldiers in anticipation of Bharata's hostility to Rāma (Rām. II. 84. 8). Within the profession of niṣāda, fishing appears as a matter of course, as much as huntug (Mbh. I. 28; Jāt. VI. 711).

As these people excelled in hagging the different species of the four-footed, feathered and finny Arts and Appliances races, their arts, appliances and accomplices differed accordingly. The quail-trapper nets quails by gathering the birds with the imitation of the note of a quait (Jat. I. 208, 434; II. 113) and the partridge-catcher snares his preys by means of a decoy bird (III. 64).1 The iguanatrapper goes to the forest to dig out iguanas with spades and dogs (godbābilam bhindanatthāya kuddālam gahetvā sunakhebi saddhim araññam pāvisi. I. 488). The deer-stalker marks the whereabouts of deer from their foot-prints traced from the water-place, sets the toils (migaluddako vaddhamayam pāsam oddetvā agamāsi, II. 153) and bags his victim with sword and spear (asiñ ca sattiñ ca, III, 185). Bows and arrows instead of the snare and the sword or spear were also used (II. 200). For fishing purposes, nets were the commonest instruments while the line (bălisiko balisena maccha uddharati. Mil. 412; cf. Jat. I. 482; Sn. 1I. 235f) and the wicker-cage (kumināni, Jāt. I. 427) set in pits and holes of rivers (nadīkandarādisu, II. 238) were also in use. It is not always however that the nesāda specialised in killing a particular animal and very often all manners of birds, beasts and fishes came within his pursuit (II. 200; VI. 71(., 170).

¹ Just like his modern prototype. The santhals, kols and other aboriginals still catch partridges and doves by the same artifice.

The professional hunter of course sells his bag,—beast,
bird or fish to the market place in the
adjoining city. He may have a modest
catch that can be carried on a pole (VI.

170) or there may be a windfall so that he drives a cartload of venison (III. 49). The hunters probably disposed of their hooty to the retailers who ran stalls of different varieties of flesh in the market place.1 There were also people who did not dispose of their prize hut lived upon them direct. "Certain men of the marches (of Benarcs) used to make a settlement wherever they could best find their food, dwelling in the forest, and killing for meat for themselves and their families the game which abounded there '2 (IV. 289). This is reminiscent of the accounts of Diodorus and Arrian on the wild nomadic tribes who hved on chase outside human dwellings. As the conquerors appropriated land of the superior grade, the more conservative of the original settlers withdrew to the marches where land offcred little attraction to the tiller. Hunting, animal-keeping and freehooting became the occupation of these Bohemians. They were less amenable to Arvan culture and consequently accorded a more dishonourable status than their more settled compatriots.

It is not possible with available data to fix the geographical regions where the hunting and fishing folk were mainly located. Probably they were scattered all over the country, generally grouped in their own villages, situated outside the borders of cities as usual with other despised professions and castes, and generally fitted in a structure of communal economy. They are referred to as plying their nets jointly and as heing obedient to one another's bidding (anyonyavaśavarttinah. Mbb. XIII.

¹ Gord atsho, orobbiko, zukaziko, maghawko, zakuntiko, etc. are butchets in different varieties of flesh and not keepers or hunters of different animals.

50) Elder Yasoja was born at the gate of the city of Savatthi in a fishers' village, as the son of the headman of the 500 fishermen's families who fished together in the river Actravati (Therag 243ff) The anglers (bahsika) in another village are in the habit of sharing their prize as it appears from a ruse planned by one of them who had a snag in his tackle and took it to be a hig fish

puttakam matu santikam pesetva pativissakelii suddhim kalaham karapemi, evam ito na koci kotthusam precasim

sissati (Jat I 482)
Elder Losaka Tissa was born in a fishing village of a thou sand families (kulasahassavise kevattagame) in Kosala of which the 1,000 heads went together to fish in river and pool (I 234) Elsewhere fishing misadas are found to live in a remote region in the midst of the ocean (samudrakuksa vekante nisadalayamuttamam, Mhh I 26) The fishing tribes of the western countries brought tributo to Yudhisthira (II 32 10) In a Jataka story are found two villages of hunters near Benares on the two banks of a river each with a chief over its 500 families (VI 711) A nesadagama near Benares is very common reference (II 36, IV 413, V 337, Therig Com 291ff) and such villages are seen as early as in the Latayana Srauta Sutra (VIII 2 8).

Von Schroeder suggests indentification of nisadas with Nysacins who, according to the Greek memoirs sent an embassy to Alexander when he was in the land of the Aśvakas. The identification however is doubtful. Varahi militri recognises a lingdom (rastri) of the nisadas in the south east of the Madhyadesa (Br Sam XIV 10) Guha's principility was situated on the banks of the Ganges beyond Kośala with the city of Srngavera (Rum II 50, 83 19)

t Ind en Literatur und Cultur p 206

Tho nesāda was despised both for his profession and for his birth. His was a despicable pursuit Social position. (luddācāra khuddācārā'ti, Dn. XXVII. 25). That animal-killing was stigmatised is evident throughout the Jatakas. It is among the ten pursuits of straying Brāhmanas. A king asks a hunter to give up his calling and adopt agriculture, trade and usury (IV, 422). A setthi's son also dissuades a luddaka from his profession (III, 51). It is given that these ill-hehaved people (dussīlānam migaluddaka-macchahandhadinam) receive but do not follow the law (III. 170). In the Mahabharata a long tribute is paid by Sakra to the niṣāda king Nala who is well-versed in all duties, conducts himself always with rectitude, has studied the Vedas..., leads a life of harmlessness unto all creatures, is truth-telling and firm in his vows and in his house the gods are ever gratified by sacrifices held according to the ordinance. In that tiger among menthat king resembling a lokapāla in truth, forhearance, knowledge, asceticism, purity, self-control and perfect tranquility of soul. . '2 and so on (III. 58. 8-11). According to the Brāhmanical rules, a Sūdra is not allowed to read the Vedas nor to perform sacrifices, not to speak of a niṣāda. The picture is unreal and the encomiums may not he taken to suggest that a niṣāda who gave up his trade was promoted from his order to higher ranks.

A more realistic account is that of the niṣāda king Guha who claims Rāma's friendship and is emhraced by the latter. But neither Rāma nor Bharata accepted the food offered by him. Unlike the Vānara and the Rāksasa allies, this niṣāda king does not fignre in the sacrificial rites and public juhilations held after Rāma's return from exile to Ayodhyā. The niṣāda was a despised creature, both by hirth and profession, and stood just above the candāla and the pukkusa in the scale of social gradation.

IV The Vena

Like the ncsada, the tena and the rathakara were according to Rhys Davids "aboriginal tribes who were hereditary craftsmen in these crafts" Fick describes them as "professional castes" or "non Aryan races who, although they stood on a higher culture level than the hunting and fishing races, engaged in branches of profession the practice of which presupposed no acquaintance with metals and their employment and were therefore held in low esteem by the Aryans who worked with iron instruments '2". The Aryans advancing along the Gangetic plains gave the original settlers names after the meterial with which they worked. Thus the 'bamboo worker' and the 'carriage-huilder' hecame names of tribes or eastes (141)

The vena, literally, is one working with bamboo reeds

To the Vedas, venu is mentioned as a reed of bamboo, hut vena, vaina or venulara are not seen. Apart from the Pah passages referred to above, the vena appears at the end of the Milinda list of crafts and professions along with the chavadahaka, pupphachaddaka and nesada. In a Jātaka verse the veni is hracketed with the candalā (sie) as a term of reduke (V 306). The renukara or velukara who goes into the forest with his knife to collect a bundle for his trade (Jat IV 251) is probably another name of the same "functional caste" who ranks in the conventional fashion along with the candala, pukhusa and rathal ara in the Lalita Vistara as hīnal ula in which a Bodhisatta is not reborn (Ch. III)

The tribal craft of these people was working with reeds, i.e., hisket making and flute making. Dhammapala

¹ Dialogues of the Buddha Vol I, p 100

¹ Op cit . p 918

³ In the Artha-fastra the rains is the is-ne of an Ambastha on a Vaidelata woman (III 7)

explains them as a casto working on willows and reeds (venim vā ti veṇajātikā vilīvakāra-naļakārā, PvA, p. 175). The Jātaka commentary on veṇī (V. 306) explains it by tacchikā,—a carpenter's widow.¹ Prohably the original hamboo-working race was not always rigidly identified with its profession. Manu defines the function of the vena as playing drums (X. 49) while the craft of making baskets and other things with cleft bamboos is ascribed to the pāṇḍusaupaka easte otiginating from the caṇḍāla (Mhh. XIII. 48. 26; cf. Manu, X. 37).

V. The Rathakara

The rathakara or chariot-maker is in the Atharvayeda Origin and Degrada. one of those subject to the king (III. 5. 6) apparently standing as an example of the tion industrial population. It appears definitely as a caste-name in the Yajurveda Samhitās (Kath. XVII. 13; Mart. II. p. 5; Vaj. XVI. 17, XXX. 6) and in the Brahmanas (Tait. I. 1. 4. 8; III. 4. 2. 1; Sat. XIII. 4. 2. 17). In the Yājñavalkva he is the progeny of a māhisya (Kṣatriya father+Vaiśva mother) and a karanī (Vaisya fatber+Sūdra mother). In later literature he is a caste below the Vaisya but superior to the Sudra.2 He is a functional caste like the taksaka and the dhairara, the carpenter and the fisherman respectively in the Vedie literature, held as inferior to the arya orders. His further deterioration in social esteem is exhibited much later in the Pali texts quoted above. In the Khandahāla Jātaka he figures in a low series with the pukkusa and the vesa (VI. 142).3

¹ Thos one despised caste is explained by means of another. In the Vedic literature the takyaka or joiner appears in a low tole

Weber Inductie Studien, 10, 12, 13 Hillebraudt suggests that the Anu tribe formed the basis of this caste, referring to their worship of the Rbhus who are chariet makers par excellence Vedische Muthofone, 3, 152 f

³ In the Arthasastra, the rathasara's is a profession prescribed for the mixed caste of Vanya (III. 7), but in the previous chapter, it is a casta asme.

This rathakāra whose very appellation indicates the function of chariot-building, became Craft: charlot building and leather work associated in course of time with a new craft, that of working on leather. Probably this transformation from a comparatively less to a more disrespectable pursuit took place in the Gangetic regions and probably this also explains the consequent deterioration in social status of the caste as seen in Pali literature. In the Majihima the artisan who is shaping an axle of a chariot (rathassa nemim) is not a rathakāra but a yānakāra (I. 5). In the Jataka verses the metaphor occurs twice,-"just as the rathakāra cuts the shoe according to the skin" (rathakāro va cammassa parīkantam upāhanam, IV. 172; rathakāro va parikantam upāhanam, VI. 51). In the first, the commentary explains rathakāra as cammakara. The commentary on the Petavatthu also explains rathakārin as cammakārin (III. 1. 13). But certainly there was no complete overlapping of the two crafts in the same caste, for the cammakara and the rathakara are both mentioned side by side in the Milinda list referred to above.1

That the two were not identified is also proved by the second states enumeration of the cammakārasippam among the set of despised callings cited in contradistruction from the despised castes. The occupation of a cobbler was held disreputable in all quarters. Manu assigns working in leather to the mixed castes of kārāvara and dhigvana (X. 36. 49): this kārāvara again, is said to be begotten by a carnakāra on a niṣāda woman (Mbh. XIII. 48. 26). Food offered by the shoe-unker is not to be taken by a Brāhmana (Mbh. XII. 37. 31). Even trading

¹ Cowell and Rouse find a puzzle in this duel function of the Rathakara and take refuge in the suggestion that he might be the worker of wooden shoes.

According to Mann however, by a meads man on a raidsha woman

in iron and leather is consnrable (vikrayam lohacarmanal),

The leather-worker's was a developed art. He did not make shoes only. He prepared leather-sack holding a hogshead's weight (kumhha-kara-gāhikam cammabhastam), leather ropes and straps, shoes 'hig enough for an elephant,' and leather parachute (cammachatta) hy means of which a hunter flies down a mountain (Jāt. V. 45 f). He worked shields of 100 layers, of superb workmanship (phalasatam 2 cammam hontimantisunithitam, VI. 451). He is among the eighteen senis of artisans who huild a king's dwellings in Uttarapaūcāla (VI. 427).

The conventional Pali list does not certainly exhaust the medley of eastes and tribes who either Inferior races. because of their race or for low occupations remained outside the pale of the Aryan culture. Under the general brand of mleccha passed the procession of indigeoous aod foreign barbarians in the Epics,-the Pahlavas, Sakas, Yavaoas, Kāmhojas, Kirātas, Cīnas, Hunas and so forth. Sioful races who act like candalas, ravens and vultures are Andhakas, Guhas, Pulindas, Savaras, Cucukas and Madrakas io the South and Yaunas, Kambojas, Gandharas and Kirātas in the North (Mbh. XII. 207. 42 ff). The Yonas, Kāmbojas and Gandbāras settled in the North-West Frontier Province. Among the Yona, the Brahmana and Sramana bad no foothold in Asoka's time (R.E., V.). Among them and the Kāmbojas, it is said in the Majjhima, there were only two castes, ārya and dāsa (d'eva vannā ayyo c'eva dāso ca) and where a dāsa can be an ārya and au ārya a dāsa (93).

¹ Cf. the cammamaluka or the leather sack used to carry earth dug out of a tunuel (Jat VI. 432)

² Pbalasaiappamänam babukhäre khadäpetra mudubhavam upamiacammam,.... Com

The Andhras occupied the land beyond the Godavari,—the southern part of the Central Provinces and Nizam's dominions. The Pulindas, though scattered over many provinces appear mainly in the north and north-east of the Andhras (R. E. XIII).¹ The Abhīras who earned notoriety as a tribe of robbers (Rām. VI. 22. 30 f) infested the western coast south of Guzrat.

In the Artbaśāstra, the mlecchas figure as savage, barha-. rian tribes inhabiting the frontiers (VII. 10, 14; XII. 4). They are associated with criminals (XIII. 5) and the sardonic author finds in them a good recruiting ground for spies and agents provocateurs (I. 12, XIV. 1).

To Megasthenes some of these tribes were reported as pigmies waging war with cranes and partridges; to the author of the Periplus they are savage and cannihal races—the Cirrhadoe the Bargysi, the Horse-faces and Long-faces who inhabited the North or the Himalayan valleys.

Apart from these the Smrtis enumerate as many as fifteen mixed castes (apasada) asciibing some particular infamous occupation to cach of them. The elaborate regulations on these mixed castes and their unmitigated denunciation would not have heen necessary unless there was a real menace to the purity of the Aryan stock from conunbial relations with non-Aryan tribes. Racial admixture was laid under the strictest interdict and the progeny of the violation of Aryan blood, relegated to all sorts of impure crafts and callings, were debased into the lowest stratum of social conformation.

CHAPTER IV

DESPISED CRAFTS AND CALLINGS

The ainstripps (1) Basket maker (2) Cobbler (3) Petter (4) Wearer (5) Basher (6) Aerobat (7) Snake-charmer (8) Snake doctor (9) Physician (10) Miscellancous (11) Variance.

The Suttavihhanga Pācittiya enumerates the five low occupations as distinct from the five low castes:

Hīnam nāma sippam nalakārasippam kumbhakārasippam pesakārasippam cammakārasippam nahāpitasippam tesu tesu va pana janapadesu ofinātam avannātam hilitam paribhūtam acittikatam, etam hīnam nāma sippam. II. 2. 1.

It would seem that for those who made their living by these trades there was no hard and fast line determined by hirth. But on the other hand the tendency is very clear for the son to follow the father's craft. The association thus begun and the stigma laid on these crafts resulted in the course of centuries into complete identification of the eraft with hirth and the crystallisation of thorough-going and hidehound castes on the basis of particular professions.

1. The Basket-maker and 2. The Leather-worker

That easte and profession were fast converging and assuming a common horder-line is clearly understood from the enumeration of the nalahāra and the cammahāra among the crafts after the rena and rathakāra are cited to illustrate caste groups. We have seen the annotator explain rena as naļakāra (PvA.p. 175). The nalahāra works with renu

or reeds. So the rathakara and the cammakara are used indiscriminately to denote the leather-worker.

3. The Potter

The Potter made earthen pots with clay and the wheel just as in the present day in the villages of India (Jāt. III. 368; Sn. II. 83; Mbh. XI. 3. 11 ff). He made vasces with various artistic designs painted on them (Jāt. V. 291). The son generally followed the father's trade (II. 79; III. 376); but the mention of the antevāsi and the ācariyo in connection with this and similar petty professions implies that these were not necessarily hereditary (Jāt. V. 290 f; Dn. II. 88). The apprentice after learning the art from the master would certainly set up an establishment of his own or succeed to his master's.

The kumbhakāra is sometimes seen settled in villages outside city-gates (Jāt. III. 376, 508). But he does not generally appear in very dark colours. The potter Ghațikāra is a bosom friend (piyasahāyo) to the Brāhmaṇa Jotipāla, so much so that the two go to bathe together and the former even pulls the latter by the locks as an appeal to go to see Kassapa (Mn. 81).

4. The Weaver

The weaver was the pesakāra or the tantavāya both of which were synonymous (Com. Vin. III. 259). Some sort of corporate life or guild organisation seems to have developed among this profession. We hear of "weavers' quarter!" (tantavitatatthānam) in a nigamagāma (Jāt. I. 356) and of

¹ Priaputtā najvkāra... gangatiro velom opadharenta, Jat IV, 318; najakara-jetihaka .. pottena sadābin gantva tau venogumban chinditon ārabhi, DhpA.I. 177 Gf. Prince Kusa who entista humself aa an apprentice to a najakāra serving a royal house, makea a palm-leaf fan (tālavantam) with paintinga upon it; Jāt. V. 291 f; basket-makora wearing a mat-malakarā kilanjim einanti, II 301.

"weavers' street" (pesakāravīthi) outside a city (DhpA. I. 424). Four weavers in Benares would divide the proceeds of their trade into five shares, taking one each and giving away the fifth in common on charity (Jāt. IV. 475). In the Petavatthu Atthakathā eleven pesakāras with a jetthapesakāra entertain a bhikkhu to cordial hospitality (pp. 42f).

The pesakara is loosely defined as a craft and as a canna (DhpA. I. 428). He is presented with the kappaka, the nalakāra and the kumbhakāra in a list of ordinary craftsmen (putbusippāyatanāni) who maintsın themselves and their parents and children and friends in bappiness and comfort (Dn. II, 14). But his trade was not a lucrative one apparently hecause of the degradation of his race and craft (lāmakakamma, Jāt. I. 356). A weaver (tantavāya) dwelling outside city (bahinagare) who was spreading the threads (tantam pssareti) while her daughter moved the shuttle (tasaran vaddlicti) even when he was caught with senile decay was considered the poorest man in the city by Mahākassapa (ime mahallakakāle pi kammam karonti, imssmin nagare imehi duggatatarā natthi manne, DhpA. I. p. 424). A sāmaņera (novice monk) who is in love with a weaver's daughter is thus questioned by ber parents: "tvam ambe uccākulā ti sallakkbesi. Mayan pesakārā, sakkhissasi pesakārakamman kātun ti ?" The love-lorn monk gallantly retorts: "gihibhūto nāma pesakārakamman vā kāreyya, nalakārakamman vā, kin iminā ?'²; and he ohtains the girl and adopts the weaver's trade (VbbA. 294 f).

5. The Barber

The barber (nabāpita, kappaka) used to do shaving, hairdressing, cross-plaiting, sbampooing, etc. (massukaraṇa-kesauṭṭhāpana-aṭṭhapadaṭṭbapanādīni sabba kiccāni karoti, Jāt. II. 5). His was a definitely disbonourable status. A court-valuer sneaks at a king's miserly offer to his prognoses as a barber's gift (nahāpitādayo) and resigns (Jāt. IV. 137).

A barber after becoming a paccekabuddha addresses the king, his late master by his family name and the crowd is infuriated at such audacity on the part of a low-caste person whose occupation is clearing of dirts (hīnajacco malamajjano nahāpitaputto, III. 453; II. 452). A barber asks his son to give up his ambition for a Licchard princess as hīnajacca. The contrast set forth at the introduction of a story which recounts a similar fancy of a jackal for a honess significantly reveals the depraved status of a barber; he is the same to a royal family as the jackal to a hon (II. 5).

Was the barber's a more respectable calling in farther west from the Gangetic plains? In the Milinda list of crafts and professions be stands in company with cooks, smiths, florists, bathers, etc.² This profession is not stigmatised in the law-books or in relevant passages of the Epics. A Snātaka is allowed food offered by a barber (Manu, IV. 253) but not by other artisans (214-20). Even to-day his position is not very dishonourable and he performs important functions in the family ceremonies of the upper orders.

6. The Acrobat, Magician and Dancer

Acrobats, dancers and jugglers (nata-nartaha) form a class by themselves. Very often these arts were combined in the same persons. They entertained citizens in the samajas or festive amusements (Rām. I. 18. 18 f; II. 6. 14; 67. 9ff) or roamed about exhibiting their skill (sippam dassento vicarati, Jāt. I. 430; māyam vidbaṃseyya, Sn. III. 141) on the highroad.

Interesting specimens of this art are given. A man born in a jumper's family (lamghana nalaka yoniyam patisandhim gabetvā) lived with his pupil on the display of his

¹ The royal barber is occasionally seen in friendly intercourse with the employer (Jät. I. 137; Vin. VII. 14).

¹ Ct. Dn. II. 14.

feat (lamghanasippam) which consisted in setting up a number of javelins in a row and dance through them (ibid.). Elsewhere two magician natas show their tricks. One of them conjures up a mango tree, climbs it and gets himself chopped to pieces by the slaves of Vessavana. His accomplices join the pieces together, pour water and bring him back to life. The other walks into fire with his troupe and comes out unscathed when the fire is hurnt out (Jāt. IV. 324). Another conjurer swallows a sword 33 angulas long and of sharp edge, hefore a gathering (III. 338). The Arthasāstra explains several magical tricks like fire-walking, fire in water, breaking of chains, acquirement of invisibility, etc., many of these in a sham manner (XIV. 2, 3).

These trades served as a wide channel for the wasting of the rich man's money. In the Sigālovada Sutta (Dn.) the six dangers at a samajjā are dancing, singing, music, recitations, conjuring tricks and acrohatic shows (cf. Dn. I. i. 13). A prodigal son squanders paternal wealth of 40 crores on drinking, glutlony and debauchery and on jumpers, runners, singers and dancers (lamghanadhāvanagītanaccādīni, Jāt. II. 431). But it does not seem that this money went to the pocket of the struggling man who was half an artist and half a tramp and who is uniformly portrayed as a wretched and despicable creature. The poor jumper who kills himself in trying to clear five spears instead of four which was within his practice (Jat. I. 430), the dancer who drinks himself to death with all the earnings by his performance in a fête (III. 507), the impoverished family of acrobats (natakakula) reduced to begging (II. 167) are typical representatives of a class living a marginal existence. Presumably the rich gamblers betted in shows run by a parasitic set of people with professional jumpers and sprinters.

In the Milinda list of crafts, the nataka, naccaka, lamghaka, madajālika, and malla come in a series on the wake of the māṃsika and the majjika,—the hutcher and the brewer. 466 SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

cure snake-bites where Greek physicians fail (15), it is not impossible that his authority was merely echoing the Indians' vaunting.

9. The Physician

The medical profession ranged from wide pharmacological knowledge to quackery and sorcery. Mcgasthenes observes both the sides of the picture. He speaks of physicians whose most esteemed remedies were ointments and plasters and who "effect cures rather by regulating diet than by the use of medicines." At the same time he notices "diviners and corcerers.....who go about hegging both in villages and towns" (Str. XV. i. 60).

The renowned Ayurvedic school at Tavila is a tribute to the development of medical knowledge. Jivaka, the celebrated bouse-physician to the Magadhan king Bimbisara, received his education there (My. VIII. 6). The ancient teachers of medicology (tikiechakānam puhbakā ācariyā) are thus named : Nārada, Dhammantari (physician of the godsspecialist in snake-hite), Angirasa (versed in the charm of Atharvaveda against disease), Kapila, Kandaraggisāma, Atula and Pubba Kaccayana (Mil., p. 272). The parable of an expert physician and surgeon (knsalo bhisakko sallakatto) who operates upon and treats a septic wound caused by weapon (Mil., pp. 110 ff : My. VI. 1 ff) or a boil (Mil., pp. 149, 353) or who can cure a leper in advanced stage or "give the blind man bis eyes!" (Mn. 75) exbibits an advanced knowledge of pharmacopœia. But as in all ancient culture groups, medical lore was vitiated with demonology and exorcism (bhūtavijjā, Dn. I. i. 21; bhūtavejjam, Jāt. III. 511). In the introductory story of a Jataka tale, even in the portion which is supposed to be later composition, a boy is advised to escape from a disease-infected house by digging a hole in the wall as the spirit of disease was supposed to guard the gate but not other parts of the house (II. 79). Belief in spirits was not the only limitation to the science. The Vijayasutta of the Suttanipāta exhibits some elementary knowledge of anatomy and ends hy denouncing love for an impure thing like the human hody (cf. An. V 110). Here is perhaps a psychological factor which conduced to the relegation of pathology and surgery to the plebeian sciences.

The art of healing was stigmatised (Mhh. V. 39. 4; XIII, 135, 14). Not only is a Brāhmana prohibited from dealing in medicinal berbs (Manu, X. 86-89; Gaut. VII. 9 ff; Apas. I. 20. 12), he is not to take the food offered by the physician (Manu, IV. 211 ff; Apas. I. 6. 19. 15; Mhh. XII. 37. 29 ff). Indra opposes the offering of Soma juice to the twin Aświns, for their profession had degraded them to the position of servants (Mhh. III. 124, 12). Manu assigns medical practice to the mixed caste of Ambaşthas (X. 47).

But however stigmatised, for a good practitioner it was not a poor profession, because people do spend for the impure filth of their hody. By curing a patient Jīvaka gets 16,000 kahāpaṇas and a servant and a maid-servant (Mv. VIII. 13). For curing the chief setthi of Rāṇagaha, he charges a fee of 100,000 (ib. 20). Nor was his status a degraded one. Suṣena the state-physician of the vāṇaras of Kiṣkindhyā (Rām. VI. 101. 43) enjoyed presumably a quite respectable status. There appears to be an air of unreality in the unqualified damnation of the medical practice in the literature of the western districts; in the Gangetic provinces at least, the profession as such probably did not suffer under any stigma. The position of the practitioner depended on his practice as now and ever.

Miscellaneous

The list given above is not exhaustive. In the Santiparva appearance in theatres (rangavatarana), disguising oneself in divers forms (rūpopajīvanam), sale of liquor and meat (madyamāmsopajīvyājīca) are among censured professions (295. 5f). A washerman, one who lives on the income of dancing girls (rangastrījīvinām), professional panegyrists and gamblers (vandidyūtavidām) and singers and jesters (bāsaka) are among those whose food is forbidden to a Brāhmana (37, 29ff). A Brāhmana is prohibited from selling salt, cooked food, curds, milk, honey, oil, clarified hutter, sesame, meat, fruit, roots, pot-herbs, dycd cloths, perfumery and treacle (Mbh. V. 38. 5). To live by purveying lac, honey, meat, and poison is a curse (Ram. II. 75. 38). The Smrtis also give butchers, meat-sellers, killers and trappers of divers animals, trainers of animals, makers of, and dealers in weapons, smiths, earpenters, weavers, dvers, oil-pressers, ploughmen, artisans, mechanics, architects, superintendents of workers in mines and factories, engineers, washermen, quacks, tailors, shopkeepers, publicans, police-officers, macehearers, astrologers, soothsayers, weather prophets, etc., (Manu III. 150.63; IV. 84, 210-20; VIII, 65 f; XI. 64; XII. 45 f; Apas. I. 6. 14; Gaut. XVII. 17; Vāś. III. 3, XIV. 2 f; Baudh. I. 5. 10. 24, H. 1. 2. 13; Nar. I. 178, 181, 183-85; Vr. XXII. 3; Viş. XXXVII. 22f, 32, LI. 8, 10, 13-15; LXXXII. 7, 9). The stigma to some of these was only relative to the so-called religious caste while to others, i.e., where the subject is disqualified as witness, it pointed to an absolute standard by which the economic functions of society would be regulated.

The professions assigned in the law books to the socalled mixed castes were *ipse jure* infamous. Guardianship of the harem is the appropriate function of the Vaidehaka (Com. Manu, X. 47; Mhh. XIII. 48. 10)², management of horses and chariots (Manu, X. 47; Vis. XVI. 13), or

¹ Trade in hency and meat is censured also in Manu, III. 151 and in Jat IV. 861.
2 According to Juspu "keeping (dancing girls and other public) wemen and profiting by what they care "CXVI 19).

singing encomiums (Mbh. XIII. 48. 10) of the Sūta. The Ayogava is a carpenter (ib. 13) or net-maker (ib. 20). The Maireyaka manufactures wine and spirits (ib. 20).

Evidently no rigid and uniform elassification prevailed. The Vinava passage quoted at the beginning of the chapter indicates that besides the damned five there were other pursuits despised in other countries. Standards varied in countries and among communities. Jealousies and predilections played their part in mutual estimation of races. What was honourable at some place might he dishonourable at another. The whole of half-Arvanised Magadha was low in the eyes of the dwellers in the land of Manu, of the highbrowed and sneakish udicca-brahmana keenly sensitive of his pedigree. The Sakyas and the Kohyas regarded each other as harbarous people pursuing eustoms opposed to their own sense of decency (Jat. V. 412). There was, further, a host of artisan classes who filled a wide range of middle position in economic condition and social esteem,-always however gravitating towards the bottom,-the smith, the earpenter, the garland-maker, the musician, the actor, the panegyrist, the huffoon, the drummer, the butcher, the brewer, the brothcl-keeper and so on.

Vagrancy

· Below the great estates of wealth and honour, outside the labouring classes, the despised eastes and the despised eallings,—the vagrant or the professional beggar completes the social picture. There was no flooded mass of starving unemployed; and to many, beggary was a profitable business. Alms-giving being an acid test of picty, kings and merebants erected big charity-balls in the city wherefrom alms were distributed to thousands of people every day (Jāt. III. 129, 300, 414; IV. 15, 63, 176, 402; V. 383; VI. 97; Dn. XVII. i. 23). Professional beggars multiplied fruitfully under the shelter of indiscriminate charity and we hear

of heggar families (duggatakula, Jāt. I. 238) as much as of an acrohat family or a wage-earning family. But the real problem of poverty was not solved, as it never can he, hy private altrusm. There were people with whom begging was the last trench in the battle for existence. With the disruption of the primitive agricultural and pastoral economy, with the growth of cities and aggravation of famines, in days when men sold their freedom for food, there were many who remained outside the reach of the henevolent and wealthy. The Jataka verse refers to "those who hegged for need" (VI. 502) and it is not an unexpected fate for a disinherited Brāhmana boy, reduced to destitution and beggary, to die helpless on the street (V. 468; cf. Therīg. 122 ff).

¹ The commentary goes: vanibbalajanesu kano: ekam pi yacakam mā vihiţihāyittha.

CHAPTER V

CLASS BASIS OF SOCIAL ECONOMY

The real India Subjective character of esnomes) and court hierature Material for peoples history Comparative objectivity of popular hierature

Popular religion Aboriginal feliabism Aryan elemental gods Symbolical gods Growth of sects and rituals Priesthood Riss to wealth and power Official and private bounties Corruption, Regular and secular clergy

Kinga and military lords Merchanta Economic background of Buddhist heresy.

Blaves and wage-earners Foonomic determinism in social gradation. The parish—his position via a via the Bangha. Social contrast,

Class compromise Immaturity of class consciousness Lower middle class the centre of gravity Exploited elements a composite body. Innovance and subjection of the Sudra

As the broad economic motives behind social and cultural growth are unfolded before our eyes, we bid fair to the India of magic and romance, the India resounding with Vedie hymns, Buddhist sermons and Epic saga. The miracles wrought by the prophet, the carnivorous and the graminivorous living in fraternal embrace, the king forsaking rāṣtravijaya for dhammavijaya, the setthi spurning his hoard like chaff and taking to pabbājā,—all melt in the horizon and we feel the hard ground of conflicts and struggles under our feet. We explore the economic content of India's great spiritual culture—production and distribution of wealth, formation of classes thereon with interests essentially hostile beneath the external harmony of a priestly social philosophy.

To ascertain whether artha or paramartha was the motive power of the cultural apparatus, it is necessary, first of all, to examine the nature of India's historical material. India

produced no Thucydides or Tacitus. It yielded a pleotiful

erop of canonists and theoreticians to prescribe the divine law and write sacred texts. They formulated their social doctrines in tune with the Brahmanist scheme of society. Their sacred institutes and cannnial literature represent only the Brahmanist scheme of snciety and not society itself. It has been long proved by Western scholars like Senart, Fick and others that Indian society was never founded on the fourfold functional caste—the varnāsi ama—as punctiliously laid down in the Smrti and didactic literature. Brāhmanas are frequently seen to drive the plough, feeding themselves nn pork, fowl and heef, living on usury nr fighting even better than the so-called Ksatrivas. The householder, instead of repairing to the forest at the age inf fifty, is more often seen to cultivate the two middle vargas, - artha and kāma. A society which observes the priestly injunction that women are gates of hell cannot produce women like Uhhayahbarati and Maitrevi. The king who is sobriqueted Sadbhagin-as the taker of only 1/6 of agricultural produce as taxes-is frequently seen ruining the cultivators with fleecing demands and no less is the same king who is extolled as a veritable god nn carth seen to die or leave his kingdom before the fury of his oppressed folk.

These social pictures are not found in the Brāhmanical sacred hooks. In fact India's history is not the traced in these canonical works nor in the panegyrics of praśastikāras maintained by kings to him the trumpet. Even foreign visitors like Megasthenes, Fahien and Yuan Chwang wrnte under the influence of these religious motives or of king's court. The pulsatiog life off the endless mass of humanity that extended between the king's paface and the ascetic's aśrama is not felt in court or divine literature. The material for peoples' life is to be sought in peoples' literature. Fortu-

nately such popular literature is not so wanting for us as genealogical and chronological tables and diplomatic and military records. Of course even this literature could oot completely escape the tamperings of compilers with idealistic meters.

The remarkable difference between the canonical literature of Brahmanas and that of Buddhists is Comparative objects vity of popular litera-ture that the former's vehicle was a savaot's language, the latter's vehicle was a more widely spoken language. Buddhist philosophy and practice exhibit some advance from Brahmanism towards cauality and democracy in their monastic organisation and theories of state. This explains why the Pali works give insight ioto popular life more than the Sanskrit The social life of commoners in the countrysido with their sorrows and pleasures, their fouds and fellow-hips expresses itself in colourful stories .-- to rhymes and verses. These unmotivated, spootaneous effusions reflect clearly the beliefs. maooers, customs and means of livelihood of the masses. The stories of the Jatakas are such folk-tales accumulated through cecturies, in the lips of the commoner. They are presented by the compiler 10 a casual, parenthetic manner only with the interpolation of the Boddhisatta motive. Sometimes this motive does not colour the locidents which have absolutely no bearing on the moral. The current of popular literature sometimes fade and dry, showed itself again in works like the Pancatantra, Hitopadesa, Kathasaritsagara, etc Eveo the Puranas and the great Epics sometimes afford glimpses into real human life heneath the

With this literature as our sources we have to appraise

Popular religion the place of religion and the form of religion in the life of the masses Every

religious futh may be divided into two compartments—one

crust of poetic artistry and idealisation.

is theology, the other rituals. Theology and philosophy is the concern of saints and logicians; the rites and rituals are the peoples' affair. As in any other country, in India also it is seen that in the early stages of corporate life, man, instead of bravely facing the ordeals of Non Aryan. nature, lost his nerves before the unknown; from ignorance came fear, from fear propitiation and deification of the unknowable. Whatever was beyond the ken of knowledge and control became mystic and divine, a ready answer to all queries was available in animism. escape from danger was fetish-worship. In stones, in animals, in trees, everywhere the aboriginal Indian tribes scented the existence of gods, demons and fairies ready to pounce upon the unwary. Between these animal and totem divinities of the aboriginal non-Aryan tribes and elemental and astral divinities of the Aryans, there is not much difference. Indra. Agoi, Pavana and Varuna are symbols of elemental forces beyond human control. Arvan The cultivator who had no mechanical devices to cope against the vagaries of the monsoons, fell to propitiating the god of the rains. Unable to grapple with the furies of fire man worshipped Rudra, to stop the onslaught of storms and floods the air-god and the water-god had to be appeased. The professional priest now stepped in to hank upon the superstitions veneration and fear of the people. Between the scared man and the remorseless god, he intervened with the much-needed charms and simples, magics and amulets. Gradually the original elemental gods,the brood of savage ignorance and folly were nursed into the brains of the intellectual to grow into full-fledged supernatural gods, each symbolising a particular virtue. Rudra, the fire-god became Siva, hannting the crematorium-the ideal of sacrifice and renunciation. The rain-god became

¹ Ample traces of these are available in the Jätalas and in South Indian liters ture and inscriptions

the king of gods—conqueror of demons, the symbol of order and righteous government. Käli represented power, Visnu love and preservation of life, the custodian of clan vital.

These gods with their respective virtues heame the stock-in-trade of different religious seets. The hostility among the Saiva, Sākta, Vaisnava and Saura were sedulously perpetuated by the man-god who stood hetween man and god. Rooted in the vested interests of the intermediary, popular religion spread new offshoots. A paraphernalia of rituals and ceremonies, distinctive marks of different sects,—hostility between the faithful and the unbeliever were the crop of thus new development.¹ Thus popular rituals which at the heginning of economic struggle was confined to an instinctive devotion begotten of fear, ripened in the course of the riso of a now economic class into multifarious rites and practices, divisions and conflicts.

Of course the works of savants contained the gospel of unity within many, of concord of the divers, of godhead above the gods. But the riddles of theology or speculative knowledge are not our concern. We are concerned only with peoples' rites and peoples' religions which are the direct products of the struggle for existence,—not with that mystic core of religion which is reserved for the wise and the learned.

It is also admitted that there were sages who east aside wealth and fortunes and spent their life to unravel the mysteries of the universe. In ancient Egypt and Babylon and in Mediswal Europe we see the wealth of the nation accumulated in temples and churches and monasteries, that taking advantage of this wealth and human failings, the priest captured the supreme

I Inscriptions down from the time of the Guptas and observations of the Chinese pilgrime show the muliplicity of sects and rituals which divided both the Buddhist and Brahmanical communities.

power of the state and to defend this 'divine property against unbelieving and heretical interlopers, revelled in all sorts of intrigues, bloodshed and treason. It is true that the Indian picture is not blackened with such deplorable savagery practiced in the name of religion. But even in this sacred cradle of spiritual culture, the worldly and securiar priests far out numbered the remaining anchorite,—the dhammadhi apa, lutapatila and kuhal atapasa grew like mush rooms all around (Jit I 375, II 405, 147, III 137, 310, 541, Mhh XII 1208, 158 186, Arth. I 11)

The treasury and garner of the monk swelled with the Rise to wealth and produce of the brahmadeya and deratra Power and such like property assigned to him free of taxes Everywhere Brihmanas are seen enjoying tax free land to the extent of thousands of Iarisas, producing food erops by means of the ox and the plough and gangs of slaves and serfs and living with the power and splendour of kings 1 Or sometimes the revenues of whole lots of villages are assigned to the Br ilimanas by royal charter, the burden of replenishing these gaps in the royal treasury falls on the rest of the people For this investment of public money what returns society receives from the average Brahmana? At most a few couplets of royal culogy (Jat V 23, 484), the solution of a dream and interpretation of omens (Jat I 272) or performance of costly sacrifices for the propination of the gods. To the credulous he sold the privilege of rendering homage to the person of a woman who was helieved to have horne a child to Brahma (Jat IV 378) Wealth and social prestige gave him further powers in state and society The priest became the chief adviser to the king in matters temporal and spiritual (atthadhammanusa saka, Jat II 105, 125, 173, 175, 203, 264, III 21, 115, 206, 317, 337, 400, etc) Sometimes he made his office

¹ Dn III 1 IV 1 1 VII 1 AVIII 1 Mn 90

hereditary (Jat. I. 437). As the sole exponent of canon law he sat in the hall of judgment and extended his power to the wider regions of civil law-of vyavahāra and vinicchaya and not infrequently traded with his judicial decisions (lañcakhādako, kutavinicchayiko, Jāt. V. 1, 228; VI. 131). Sometimes he flattered the conquering zeal of the king so that in the whole of India "he will become the sole king and I the sole ho isepriest" (ekapurohita, Jat. III. 159) All the while the recipient of bhogagamas and brahmadeyas increasingly invested his wealth in commercial ventures or following the fourfold Vaisya pursuits of agriculture, cattlerearing, trade and usury grew into a multi-millionaire (asitikotivibhavo) eapitalist interest and basked in the sun-shine of the court. His daily pension from the king amounted to 100, 500 or 1,000 kahāpaņas (Mn. II. 163; Sn. I. 82: Dhp. 204 Com.) He is seen in the role of great magnates sending 500 wagons from East to West (Jat. IV. 7; V. 471). He is seen to multiply his wealth sailing with eargo and slaves and servants to the Far Eastern Islands (Jat. IV. 15: cf. VI. 208). He is seen to function as king's treasurer (Jat. I. 439; E.I. IX. 33. iii). As the cult of Mammon grew among the traders in religion, megalomaniae hounties became a fashion with their roy il patrons and proteges.

The gifts of brahmadeya imposed by priesthood on temporal authority by cajoles and threats conduced to a rapid concentration of land in the hand of secular Brāhmanas' who are so prominent by their landed wealth in folk literature, although in didactic pieces cultivation of land is assigned exclusively to Vaisyas. Private munificence vied with the royal. An early Brāhmī inscription in Mathura records a perpetual endowment hy a lord out of the monthly interest whereof 100 Brāhmanas should be served daily (E.I. XXI. 10). From a single day's

itinerary, a Brālimaņa begs sufficient money to buy slaves male and female (Jāt. III. 313).

Nor was the Buddhist samgha immune from the corrupting influences of gold. The Karle and Corruption and abuse Nasik Cave inscriptions show how the extravagant bounties of Saka princes flowed indiscriminately into permanent endowments to Brahmanas and to the samaha. Kusana inscriptions from Mathura tell the same story (E. I. XXI. 10). The Buddhist monasteries are so often found overflowing with gain and honour (labhasakkara) 'like five rivers' (Jat. I. 449; II. 415; III. 126; Dh's Com. on Therig. 92 ff), which undermine their ascetic purity (Mn. 76, 79). They maintained slaves and servants who begged alms on their behalf (Jat. III. 49) or served as gardener or went on shopping errands. Female slaves and dancing girls are seen in the Brahmanical (E. I. XIII. 7A) and Jama temples to serve or perform, for gods and their mortal agencies. The superintendent of female templeslaves enters into the list of temple officials (E. I. XIII. 7A). They "are frequently represented on the Buddhist monuments as exhibiting their art at festivals."2 Instances are not rare of sages falling from virtue as a result of surfeit from lay people (Jat. V. 162), nor of people entering into the cloisters for comfort and lucre (I, 311, 340). Parents . would choose for their boy the monastic life as the most comfortable means of a livelibood (My. I. 49). In the words of Mahamoggallana himself there was a vast number of deceitful tricksters (sathā māyāvino) who took to pabbajita not for belief hut for livelihood (asaddbā jīvikatthā; Mn. 5). The whole set of disciplinary rules laid down by Buddha throughout the Vinaya-pitaka reveals in fact a desperate effort to resist the rush of self-seekers and criminals in the

Mrs. Rhys. Davids. J. R. A. S. 1901 p. 853
 Bühler. Epigraphia Indica. IV. 24

samgha and to stamp ont corruption and luxury which public liberality constantly impinged upon it.

Inscriptions in Karle and Nasik Caves, those from the time of Kaniska and Huviska (E. I., VIII. 17 f) and those in the Sanchi Topes are a sad commentary on the monastic vow of poverty. Out of the 285 votive inscriptions from Sanchi as many as 54 monks and 37 nnus appear as donors. "They must have obtained by begging the money required for making the rails and pillars. This was no doubt permissible, as the purpose was a pious one. But it is interesting to note the different proceedings of the Jaina ascetics who according to the Mathura and other inscriptions, as a rule, were content to exhort the laymen to make donations and to take care that this fact was meotioned in the votive inscriptions." 1

The argument may be put forth that the brahmadeya and immunity from revenue accrued not Brahmanas, regular and secular to all Brābmanas but only to śrotriyas or those who studied the Vedas and performed sacrifices thereby performing some social duty. The Santiparva indeed carefully demarcates pious Brahmanas who are to be exempted, from secular Brabmanas who are to be fleeced with taxes and forced labour. But is there any recognised hallmark of piety? The Brahmanical works themselves show the priests haggling and burgaining for their fee (Sp. 29. 124f; of. Arth. 111. 14; Jat. I. 343; III. 45). They were organised exactly on the lines of industrial guilds and laws are laid down for the division of their carnings (Manu, VIII. 210, 206; Nar. III. S). The Palı literature, especially the Jatakas, show that the recipients of brahmadeya gifts of land as those of labhasakkara in the Buddhist Order were not devoted spiritualists. Even if it be accepted that wealth and privileges poured upon bona fide religious persons and orders, history has abundant proof that such a constant outflow corrupts even the purest recipient and works his ruin. At any rate, the state became the poorer and had to lay its fingers in the pockets of the toiler.

The pseudo-religous caste had not the monopoly of power and privileges. The other estates were Military lords. aligned with them on identity of interests, known in the Dharmasastras as the Kşatriya and the Vaisya. Although proofs are lacking of the existence of a group of military castes under the general name of Ksatriya, still there is little doubt that there was a class of nobles who cultivated the arts of polities and war and oecupied certain high posts of government. With the expansion of the king's family his kinsmen were absorbed in this class as generals, feudatory lords, governors and hureaucrats. Or, in the ease of oligarchical tribes like the Sakyas, the Koliyas, the Vrijis, the Mallas and later on the Rajput clans, the so-called Ksatriya caste divided the tribal land among themselves. With land they monopolised political power. Their much-belauded republican government was confined to the rajakulas;—the samantas, uparājas, amātyas and other underlings enjoyed that much of wealth and power which their masters condescended to spare for them, and the slaves and hirclings "who formed the majority in the state cultivated lands, gave their life in battles to defend their master's interests and obtained food and elothing or wages up to or more often below their living.1

Side by side with this class rose the class of merchants;

Mercantile magnates proprietorship of vast landed estates went under the grip of capital. The sreathis did not stop with sending fleets loaded with cargo to Java, Sunnatra and the Eastern Archipelago; they also cultivated

vast stretches of arable land by means of gangs of slaves and hirclings and thereby attained to the topmost rung of the economic ladder, familiar as asitikotivibhavo. Like the qāmabhojaka and the Brāhmaņa magnates, the setthi accumulated huge quantities of grain which he cornered in times of scarcity and which thus gave him a sinister influence in society. He represents "a crosscut through the ancient system of castes, a plutocracy perpetuating itself as an aristocracy." 1 The setthi and the industrial gana were powerful economic interests which had large influence in the policy of the state and which no king dared to defy. From this community was filled up the high post of financial adviser (setthitthana) which presumably determined the economic policy and functions of the state and which often tended to be bereditary (Jat. I. 231, 248; III. 475: IV. 62: V. 384). As owner of eighty crores he is found highly esteemed by king and hy citizens and country-folk alike (rājapūjito nagarajanapadapūjito). As Fick says, the setthi, by virtue of his immense wealth, became indispensable to the king, as we find him constantly in his retinue.2

As in Europe of the 18th century it is seen that the economic content of democratic movements was the struggle of the rising bourgeoisic to seize power from the grip of the

Economic background of Buddhism.

firmly entrenched clergy and nobles, so the ideal of Buddhist republicanism was the replacement of the Brāhmana priesthood

hy the setthis and galapatis and their royal allies. Against the Brāhmanical pretension to supremacy explicit in the fourfold caste order and asserted in many legends like that of Viśwāmitra, the Kṣatriya aspirant to Brāhmanism and that of Paraśurāma, the destroyer of Kṣatriyas twenty-one times all over India, the Buddhist works give precedence

^{61-15/5}B

to Khattiyas over the Brahmana, Gahapati and Sudda and very often bursts into vigorous denunciation of the Brāhmanas with their sacrificial rites and sordid motives of gain. "The Khattiyas are superior, the Brahmanas are inferior," so says Gotama (Ambatthasutta, Dn., cf. Jacobi: Jamasutras, pp. 225f). "The superior position of the Khattiyas in the Eastern countries and the corresponding decline of Brahmanical influence present themselves to us with irresistible necessity when we study the Pali Literature." "The prevalence of merchants and traders (in the Sanchi Ins) seems to indicate, what indeed may be gathered also from the sacred books of the Buddhists, that this class was the chief stronghold of Buddhism." 2 The settli and gahapati were the principal tax-paying class 3 and so had their axes to grind against the Brahmana exemptees swelling with wealth. The economic background of Buddhist heresy is the combination and revolt of the two powerful class interests-the military and the mercantile-against the old monopoly interests of Brāhmaņa priesthood.

The mercantile interest served the samgha as lay upāsahas, huilt them caityas and stūpas, fed them with choice delicacies and use to power and position. The long feud with Brāhmanism at last terminated into a compromise. The setthi and gahapati had their position acknowledged and with their purpose served, they let down the Buddhist and shifted their bounties and allegiance to the Brāhmaṇa. Inscriptions from the time of the Guptas record this change.

. Thus the upper classes appropriated national wealth and political power. The slave Slave and hireling. hireling who with their toil huilt the edifice of civilisation and prosperity remained the deprived aod despised underdogs of society. They were employed in gangs for the service of the rich. The slave was like He had no juristic personality nor master's cattle. property. The male slave is seen to work on hire to feed his master, the female slave is seen to warm his bed. If sometimes they were treated well, it was in the same way as the owner cared for his cattle from his own interest or from prolonged association. The servant working for a wage or for share of profit had not the same luck. most cases he was denied a living wage and a square meal. This landless proletariat remained at the lowest rung of the economic ladder. The lawgivers and politicians did not spare them the barest amenities of life.

The three aristocratic classes into whose hands concentrated national wealth form the dwija Economia determin trated national wealth form the ducia group—the impoverished dasa class form the Sudra group.1 Of the so-called Brāhmanas, Kṣatriyas and Vaisyas many were ımpoverished by the shufflings of fate and relegated to the pleheian class. Brahmanas and gahapatis fallen from fortune appear as poorest farmers, artisans and hunters. In literature, sacred and profane, they appear with despised callings of quacks, king's orderlies, wood-cutters, petty traders and craftsmen and in every conceivable role. Scions of royal race defeated 10 battle or dice or victims of court or palace intrigue are seen to be reduced to begging or to slavery. The commercial magnite whose caravan was plundered by brigands or whose cargo was sunk in the ocean had to live by serving others. Mabākacchana illustrates the equality of castes by

¹ Mark the indiscriminate use of ddsajati, sudrajati and dasavarna, indravarna,

pointing out the uncontroverted fact that any one of the four castes, if he can become rich, may employ another of even superior caste to serve him as slave (Mn. 84; Suk. III. 369-75). Against Senaka's contention that "wise men and fools, men educated or uneducated, do service to the wealthy, although they he high-born and he he hase-horn," Bodhisatta has to take his stand on the next world to prove the superiority of a poor sage over a wealthy fool (Jat. VI. 356ff). The cant coofession is made in the Mahāhhārata that wealth confers family digoity while poverty takes it away (III. 192. 21). Social precedence was thus determined not by hirth hut hy weslth. Thus the priestly caste theory which was sought to he foisted on society hroke down under the mexorable pressure of material circumstances and gave place to hostile classes helonging to different economic categories.

Aligned with slaves and hirelings was another class,the low castes and low crafts who under The Mieccha the general brand of mleccha were degraded even below the Sadra. The pariahs pursued arts and trades which the society could not dispense with but which repelled the sophisticated sense of refinement and culture. The Pali works testify that they lived outside the village gate and city gute, i.e., in isolation from civilised society. The habitat assigned them by the lawgivers was the hill and forest or the cremation ground. Tree is to he their shed, iron their ornameot and pariah arts their profession (Manu, X. 50; Mbh. XIII. 48. 32). They exposed themselves to any length of corporal punishment if they defiled with their filthy presence the air and water in the vicioity of their superiors. They were denied the great honour and privilege enjoyed by the slaves and seris, that of serving their masters.

It is true that the door of the samgha was open to all these people exceptiog the slaves. But they are very seldom seen as memhers of the Order; firstly, hecause the homeless,
conditinn was often a reaction from
surfeit of wealth and power which these
people were totally denied; secondly,
because the poverty and degradation which was their

people were totally denied; secondly, because the poverty and degradation which was their habitual lot did not foster that high enlightenment and spiritual consciousness which actuate monastic zeal. "Judging from their isolated and low position which excludes them from all communium with the Aryan people and as a consequence of this, from all participation in spiritual life the actual existence of such holy men is extremely doubtful." They were at least rare.

The pronounced social contrast between the two classes is expressed through the familiar Pali phrases 'mahābhogakula - and 'daliddakula,' 'sadhana,' and 'adhana,' 'sugata,' and 'duggata,' through the lamentations of Gālava (V. 106, 11) and of Yudhisthira Social contrast. (V. 71, 25f) in the Mahābhārata that one destitute of wealth is a wretch, that there is no virtue for the poor, that wealth is an essential contributory factor to the cultivation of virtue. In the Pali passage quoted at the beginning of this Book, ignorance, low birth, poverty, vice and purgatory form an unbroken chain, while wisdom, pedigree, wealth, virtue and heaven constitute a set of counterparts going together. This is not an isolated passage and recurs almost verbatim throughout the canons (Mn. 93. 96 : An. II. 85 : Sn. I. 93 : Pug. IV. 19). Virtue thus tended to be a monopolistic concern of the upper orders with ample leisure and ample wealth; and in the preservation of this leisure and wealth they ultimately made a caricature

¹ Fick, op. cit, p 51. 10 among the 259 authors included in the anthology of Theragitha and 4 out of the 73 in the Therigaths come from the ranks of the poor and despised; actor, parish, fisherman labourer, slave, trapper, 'poor family,'etc., e, sout 4 2 pc. 486 SOCIAL AND RURAL ECONOMY OF NORTHERN INDIA

of virtue which poisoned the social organism and led to metamorphosis and decay.

These are not to deny that this social inequality was not as glaring in India as in other ancient cultures. Class

differences did not assume those horrible and destructive proportions in India as they did in ancient Rome, Greece and Egypt and later in France and Russia. That implacable hatred between the Patrician and the Plebeian, the perennial and seething disaffection of the helots always ready to burst and explode the Spartan state and the enslavement of the whole people below the Pharaoh with his priesthoods and entourage in the land of the Pyramids,—these scenes are not witnessed in India. It is an interesting subject for investigation why class conflict and class consciousness did not mature in this country.

The chief reason is that the zemindary system could not develop in ancient India. The freeholder was resl master of his arable and homestead land. The small farmer defrayed his expenses cultivating his own land; in the eyes of law he was equal with the great Orreum stances favouring class comlandowner-the asitikotivibhavo kutumbiko promise: 1. The lower middle class. who employed slaves and serfs to cultivate his fields. Generally he had no fear of losing his property except in cases of famine or a natural calamity. Ordinarily he remained in hereditary enjoyment of his patrimony unless he pitted himself against the powerful and defaulted in the payment of revenues. The gamabhojaka was not a zemindar to whom land was farmed; he enjoyed the revenues of and ruling powers in his bhogagama but not ownership and usufruct.2 The independent small freeholders and craftsmen

¹ Class struggles were rare but not altogether absent though evidences are lacking. The Kaivarts revolt in the reign of Mahipale in Hengal is a pesitive instance.

¹ Ece supra, Bk. 1, Ch. III.

may be termed the petty hourgeoise of ancient India who from the last few ceoturies are being gradually declassed and levelled with the proletarian mass. This middle class formed the majority distributed over a wide range and this class of lower Vaisyas held the halance between the Sūdra and Dwija classes. Society was a complex hierarchy and because the centre was heavy, poise was maintained.

The second point to note is that the exploited elements in India were never welded into a homogeoeous mass with the consciousness of a common class

2. Exploited class, interest. It is seen even now that the Savara discards the Candala untouchable as much as he is himself hated as a low caste by the Brahmana. The exponents of divine will have created and perpetuated this division among the hinavarnas with masterly skill. The slaves and hired folk too could not combine with the pariahs,-they could not even develop a communal consciousness among themselves. The reason for this is that they were not numerically strong like the slaves in Rome and Egypt and they lived scattered and distributed in different localities. We have no dāsagāma or bhatikagāma as we hear of candalagāma or nesādagāma. The latter lived in villages of their own. The slaves and wage-earners lived with their masters or were scattered in their several sheds. The slaves were not always treated inhumaoly and felt the family ties of their masters; so discontent did not spread sufficiently deep for violent action. The wage-earners had no means to organise, no facilities to build guilds and unions like śreni, samaha, pūga, etc., as the skilled artisans used to do to safeguard their interests. They had no fixity of dwelling and fixity of terms nor any security of service. Standing between vagrancy and starvatioo, ekiog out a miserable existence by any chance eogagement, this mass of unskilled labour was thrown entirely at the mercy of the employer.

The third leason is that the lower classes were not give access to the secrets of knowledge which gives confidence

3 The Sudra kept and voice of protest to the marticulate in agnorance under For a Sudra it is sacrilege to profine the threat

these straceable times, these people were kept in dire ignorance. The holy mantra was coostantly dinned to their ears that their only path to salvation was through service of the higher varnas. Whoever had the temerity to question this authoritarian system or to strike at the closed doors of knowledge had on escape from the inquisitorial vigilance of the Brahmana and the retribution which it brought. The legend of Sambuka, a Sūdra hinavarna who dared to perform Brahmana cal rites and who for this inexpiable offence forfeited heavenly blus though killed in Rāma's hands is only a case in point. The Sūdra and Mieccha were never allowed to think and feel their position on earth.

Thus it is that the multi-caste society, compartmentally divided, lotegrated the parts. The mechanism of class collaboration was a slowly huilt process. The oldest books hark hack to the existence of only one varna, that of Brahmaoa or Deva in the dawning era of geoeration (Rv 10 90 5, 10, 121, 1, B: Up. 1 4 10 11; Mun Up 1. 1) This primogeoial varna or uni-easte society existed only during the figment of Satyayuga recalled to emphasise Aryan solidarity and the bliss that was yet to be conquered against the hostile surroundings of the time. The selfsame literature present a two-caste society, emerged, not from a split of the primogenial hody but from the impact with another body or race, viz, the Anaiya, Dasyu, Sudia or Asura (Rv 1 5 1 8, 1 103 3, 1 117 21, 1 230 8; 3 34. 9,5 28 4,6 22 10,7 6.3,10 22.7f, Av 19 62 3; 19.7 8 1, B: Up 3 3 1) This is not class war but a war between two families of races, the aboriginal Asura or Dasa on the one hand, the aggressor Deva or Arya on the other. 1

The two-varna war fought for the possession of the heaven, the earth and the seas, for the charms of women, greed of wealth and lust of power, legendised in innumerable hathas and gathas, was later attenuated into the esoteric doctrine of struggle heween the soul and the flesh. the sentient and the ohtrude, the sattra and the tamas This symbolisation of the devāsura legend was no doubt an after-thought, masmuch as the Asuras sometimes beat the wisdom of the Devas and the Devas acquire the secrets from their rivals hy methods not very sattvic 2 The spiritual antitheses of aryabhava and dasabhava were moulded into the synthesis of brahmabhava,- sarvé varnā hrāhmanā hrahmajāśca sarvė ' (Sp. 318 89), 'sarvam khalvidam hrahma saryam hrahmamayam jagat' (Ch Up III XIV 1) But the social antitheses found their synthesis not in monism hut in pluralism The casteless or classless millennium was an idea, never a reality. The two varna system gave way to a complex hierarchy, the Arya ramifying into three varnas which were intervoven into countless sub-castes and mixed castes. The Brahman remained a cosmogonical and an ontological conception, it never became a social entity It did not regulate the social attitude of the so-called Brahmanas and the privileged classes. The theism of Brahmavidva accordingly remained at the apex of the social pyramid. The popular religion of polytheistic and pseudo-theistic cults permeated the hody and the base

¹ The Rg veds is replete with references to this protracted socio-caste struggle "Viśwasmad simadhemanindra dasyun viso dasirakrno raprasastah, 5 28 4 Lord Indra : You have deprived these Basyus of all merits. You have made the Basa people blame worthy Again.

CHAPTER VI

MATERIAL BACKOROUND OF INDIAN CULTURE

So the pet patriotic tradition of a super-mundane Indian culture does not stand the test of the scientist. In the process of historical evolution, hard material facts are exposed with crude reality. On scientific analysis the glorified missionary and cultural enterprises heyond the Himalayas and the Bay of Bengal reveal similar social forces as worked helind the European migrations to Africa and Asia in the last century or recent Jewish exodus from Germany under pressure of the Nazis

The ahundant instances of sea voyages in the Jātaka stories all relate to commercial ventures in the Eastern Islands or to even haser economic motives. This early diplomatic exchanges between princes were very often secompanied by the exchange of some rare agricultural or commercial goods. It has been held on good authority that most of the emhassies from Tamil kings going with tribute to China were merely trading expeditions on joint account of the ambassadors. The great trek to Java from northwestern India was a part of the process of Saha migration which was stimulated by the anarchical conditions of northern India and by the conversion of the Bay of Cutch into a salt desert accompanied by the diversion of the rivers that witered it. The defeat of the white Huns by Sassa-

¹ One of them narrates how a whole settle nent of carpeters consisting of 1000 families took contracts for touses and furn ares—but sites taking a large advance fault to do ther job. Harsased by their creditors they built a ship and slipped off at dead of night with their families into the ocean. IV 189

¹ J R A S 1669 pp 490 ff

nisns and Turks in the latter half of the 6th century intercepted their retreat northwards. There were military pressures and defeat from the Maukharis of Kanauj. These were followed by the Turkish advance from the north and Arab raids both hy sea (637) and through Persia (650-60), the overthrow of the Buddhist Saharais by their usurping Brāhmanist minister Chach and his persecution of the Jats,—a series of incidents which explain a steady outflow of north-Indians southward from the ports of Sind and Gujarat which was stimulated by the tradition of Javan prosperity.

Prior to the ninth century from when the decline of Buddhism stimulated large-scale migration of the faithful from Bengal and Kalinga to the Eastern Islands, the commercial intercourse of the Buddhist merchants set the stage for missionary undertakings and later for assumption of political supremacy.2 In the memoirs of Chinese pilgrims the great Bengal emporium of Tamralipta appears as a conspicuous Buddbist settlement. Tudo-Chinese religious intercourse beginning from the 4th century A.D. was preceded by flourishing Indo-Chinese commerce from the 1st century A.D. This commercial and colonising activity as well as religious intercourse simultaneously reached their height in the time of I-tsing who records the itinerary of sixty Chinese pilgrims and bears witness to prosperous Indian colonies in the Archipelago and the East Asiatic coast which served as convenient halting places for missionaries.

So the spread of Buddhism in the far East with Indian art traditions, the dhammaghosa and the dhammavijaya are ultimately traced to the political and economic circumstances of northern India and neighbouring countries.

¹ Bombay Oazetteer, Vol. I, p 498.

¹ Col. Phayre : History of Burma Race.

The political interconrise between the Caesars and Kugāns as recorded by Roman historians is explained by the fact that "their commercial importance as controllers of one of the main trade routes between the East and the West made the friendship of the Kuṣāns or Sakas who held the Indus valley and Bactria a matter of the highest importance to Rome." These commercial transactions brought arts and ideas in their train. Roman astronomy, Roman coinage, Roman art traditions which inspired Indo-Bactrian plastic art at Gandhāra, all flowed through the streams of Roman gold.

Thus the noble cultural heritage of Greater India dissolves into a melieu of material forces operating under the inexorable dictates of Nature. Royal fury, foreign invasion, embroiling debts, loss of wealth and lust of gold,these motive forces set peoples and races on move. They only carried with them a gilded layer of Indian lore and Indian cultural traditions, the social and cultural values which were impregnated by the class-characteristics in their own country. Literature and art reflected this class stamp of society. Lake literature, art was divided, though not very sharply, into two schools,-the royal art executed at Sarnath, Karle and Nasik and the folk art carved at Barbut and Sanchi. The wide activity of the guilds in spheres legislative, political and cultural and their importance recognised in all theoretical works, shows the magnitude of economic influence. In the rise and fall of Empires, the same immutable laws were working. The great dynastic interests were sopported by the rise of the Brahmana and the Setthi on one hand and by foreign invasions on the other which threatened hig properties and vested interests. In the rise and decay of religions the same principles are revealed. It would not be gratifying for the Holy Buddha

Bombay Gazatteer, Vol. I, Part I, p. 490,

to find his immortal message reduced to a medley of silly superficial rituals. He would not be flattered at his devotees worshipping his nails and teeth instead of practising the four vijiās and the eight maggas. But such is the irresistible march of history. Bereft of the economic interests which called the Buddhist message to fight the existing order with their arms and wealth, Buddhist mission died as a religious force in the country and was transplanted into foreign countries with a new and congenial economic setting.

'artha eva pradhānah' so says Kautilya; arthamūlau hi dharmakāmāviti (Arth. I. 7).

APPENDIX

THE DATE OF THE ARTHASASTRA

The controversy over the date of the Arthasastra attributed to Kautilya has of late tended to subside and scholars with rare exceptions are complacently building their theses Shamasastri upon the theory of Vincent Smith and assigning the work to the 4th century B.C. The plea to bring it down to the 3rd century A.D. set forth by Jolly in the introduction to his edition of the Arthasastra and hy Winternitz in the third volume of the History of Indian Literature has had no wide acceptance and was weakened hy the refutation of Shamasastri and N. N. Law. In an article in the J.R.A.S., 1929 (pp. 77-89) it was shown hy another scholar that the comparison of certain expressions and passages in the Arthasastia with Asvaghosa's Buddhacarita on the one hand and with Aryasūra's Jātakamūlā and the Lamkavatarasutra on the other placed the book with tolerable certainty between the beginning of the Christian era . and about 150 A.D., or at most 250 A.D. In the Political History of Raychaudhuri 300 B.C. and 100 A.D. are taken as the upper and lower limits. Without any pretension to speak the last word on the subject a few clues to the chronological mystery may he gathered which expose the 4th century theory to considerable amount of criticism and incline the balance of evidence in favour of the 1st century after Christ.

The priority of the Arthasastra to the Smrtis of Manu and Yajaavalkya has been sought to be proved by comparson of their social and political systems. This is based on the false assumptions that the theories in the Arthasastra

correlate to facts and institutions without fail and that there was absolute uniformity of beliefs and practices in Magadha and the Brahmarsidesa or land of Delhi and the Eastern Punjab where the sacred institutes were born. The points of analogy moreover are not less if not more outspoken than those of disparity. As hetween the Arthaśāstra and Manu, Yājñavalkya and Nārada affinity is very close with regard to the laws of hire and contract, of debt, deposit, witness, gift, stolen property and ownership; robbery, defamation and intimidation; assault, marital rights and proprietary rights of women and inheritance. Manu and Yajñavalkya attest the fixing of price of merchandise. There is also similarity with Manu on the existence of private and communal ownership of land side by side. -acceptance of a day's work from common artisans in lieu of taxes, salt as a royal monopoly among other things (landgrants dating from the time of the Satavahanas frequently confirm that salt was a royal monopoly under their rule) and reference to the Magadha among mixed castes. The argument that the Arthasastra knows only four kinds of slaves while Manu seven and Nārada fifteen was put forth from oversight for the Arthasastra distinctly refers to the (1) udaradāsa—horn slave. (2) krīta—purchased. (3) āhitaka—acquired by mortgage, (4) sakrdātmādhātā—voluntary enslavement, (5) dandapranita-enslaved by court-decree. (6) gṛhajāta-born in the house, (7) dāyāgata-acquired by inheritance from ancestors, (8) dhvajahrta-captured war or raids. It is moreover pointed out that slaves might be acquired in other ways that are left unspecified (lahdhakrītāoām anyatamāni). Thus the Arthasāstra list is wider than Manu's (VIII. 415) and embraces almost all the varieties cited by Nārada (V. 26-28) only under more numerous sub-heads except a few which may have been later development. It is most unsafe to derive chronological conclusions from comparison between sastra literature which

not only ignore facts on many instances but represent theories and institutions of a much earlier age than the one when they are composed. Still the closer resemblance of the Arthasastra to the later dharmasastras than to the earlier dharmasatras of Gautama, Bodhāyana, etc., cannot be left entirely out of account.

A conspicuous example of this analogy is found in the currency system described in the three types of literature and in Pali works.

Commenting on Suttavibhanga, the Pārājika, 11-16, Buddhaghosa says that in Bimhisāra'a time in Rājagaha:—

1 Kahāpana = 20 māsakas 1 pāda = 5 māsakas

1 Kahapana = 4 padas

This kahāpana however, he warns, is the ancient nīlakahāpana not the Rudradāmaka—a depreciated standard adopted and followed from Rudradāman's time.

Sārīputta again in his commentary on the passage of Buddhaghosa, explains that this Rudradāmaka is \(\frac{3}{4} \) of a \(\frac{7}{16} \) itakahāvana.

From a comparison of the weight of the silver dharana as given by Msnu, Yājāavalkya and Viṣnu and of the Rudradāmaka kahāpaṇa it is found that they bear the same ratio in weight as the nīlakahāpaṇa to the latter, so that the dharana and the nīlakahāpaṇa may be identified denoting the same class of silver coins. It is to he noted that while Gautama and Kātyāyana, like the Pali texts retain the term kārsāpana for silver as well as copper coins, Manu, Yājāsvalkya and Visnu reserve kārsāpana only for copper coins and invent the separate term dharana for silver coins. Probably the Pali term nīlakahāpaṇa was devised to remove this source of confusion.

¹ See C D. Chatterpi's article on Numsematic Data in Pali Lifterature in B C. Law's Buddhistic Studies, pp. 424 ff.

Now the Arthasastra agrees with the later law-hooks in this respect. Its silver coin is dharana and its copper coin kārṣāpaṇa. It also agrees with Manu, Yājñavalkya and Visnu in respect of the prescribed weight of the standard gold and copper money,-the suvarna and the pana or karsapana-but differs as regards the weight of the standard silver coin-the dharana. This difference may be easily accounted for. . The prescribed weight of dharana in the Arthasastra closely approximates to the prescribed weight of the suvarna and pana the margin heing explicable by the fact that since the weight of the gaurasarsapa and the gunja or kṛṣṇala might slightly vary in different parts of India, the ratio between the two given in the Smrtis may not be the exact standard. It seems that the author of the Arthasastra aimed at a currency reform whereby the same weight standard could be prescribed for the three classes of coins like many other projected reforms in other spheres of administration.1

Shamasastri claims that the kārṣāpaṇa which according to Patañjali's Mahāhhāṣya was in earlier times equivalent to 16 māsas, indicated the Arthaśāstra's equation of 1 suvarṇa or karṣa to 16 māsas. He has confused between the weight standard of karṣa (to which conformed the standard gold coin suvarṇa) with the silver money called kārṣāpaṇa. In the Arthaśāstra's table 1 karṣa=16 māsas=80 guñjas or kṛṣṇalas (or ratis) according to Smṛti nomenclature while a kārṣāpaṇa weighs 56 grains or 32 kṛṣṇalas. The kārṣāpaṇa of Patañjali may of course be identified with the dharaṇa of the Arthaśāstra which is equated with 16 silver māsas. But this equation is repeated

C. D. Chattery, op. cit., pp. 423 ff

² The average weight of the Rudradāmaka lahāpana or old silver punch-marked coins is 42 grains Therefore 1 milakahāpana = ^{42 × 4}/₃ gra.=32 kṛṣṇalas or ratus, 1 rats being approximately equal to 175 gra C. D. Chatterji, op cut., pp. 423 ff.

with Manu (VII. 135-36), Yājnavalkya (1. 364) and 3 işņu (IV. 11-12) and in this as in many other respects the author of the Arthasastra may have merely lined up with contemporary Smrti literature without caring whether the system described prevailed in his time netually or only in tradition; or the system may have been revived from the 1st century A.D.

The standard gold coin in the Arthasastra is suvarna which in earlier literature is night, satumana and hyspala and in later ones dināra. But no chronological demarcation can be drawn between the suvarna and the dinara. The dinara never became a standard token coin all over India though it is found here and there from the 1st century A.D., while on the other hand the surarna continues to be the standard as late as in Usavadāta's Nasik inscriptions equalling 35 karsapanas. Thus the mention of surarna as standard gold coin places the Arthasastra positively later than the stage when the niska was the current coin as represented in the Epics and the Jatakas, but not necessarily earlier than the 1st century B.C. when the dinara began to obtain currency in parts of India.

The comparison of the political and social theories of the Arthasastra with the fragments of Megasthenes bespeaks a similar wrong mode of approach towards the chronological problem as its comparison with the legal injunctions. A political philosopher is no historian. Had Kautilya been the maker of the Maurya Empire and founder of the dynasty as well as the author of the monumental treatise it is of course likely that his pet theories would have been worked out in practice and Megasthenes' testimony agreed in many details over them. But Megasthenes differs no less than he agrees. He refers to a good war-practice that crops and lands are not destroyed by belligerents; the Arthasastra definitely enjoins such devastation (IX. 1). His affirmation that infliction of injury on royal artisans or

evasion of municipal tithe entailed death sentence is not found in the Arthasastra's penal code—which is more akin to that of Manu and Yajnavalkya. The cvidences of Megasthenes on writing, on famine and on usury though faulty, contain an indirect truth which substantially militates against the Arthasastra.

While these conflicting evidences are dismissed on the score of the rashness of Megasthenes' statements the observation on non-existence of slavery is adduced as tallying with the liberal rules of the Arthaśāstra on slaves. But in the Arthaśāstra's time there were mleccha slaves who are summarily passed over, but who obviously far outnumbered the ārya slaves and for whom there was no mitigation. Megasthenes therefore seems to have either made a statement without knowledge of facte and consequently of no worth, or the mleccha slaves must not have heen so numerous in his day as in the time of the Arthaśāstra.

Megasthenes and archaeological excavations show that Pāṭaliputra was surrounded by a timber palisade and an outer ditch. The Arthasastra is much against the use of wood because "fire finds a happy ahode in it" and wants—three ditches to be dug round a fort (II. 3).

The supposition that the Arthaśāstra reflects pre-Buddhistic society does not stand in the face of the clear reference to stūpa (XIII. 2) and to the śūkyas and ājīvikas. The proscription of these people along with the śūdra and the pravrājīta (III. 10) in ceremonials devoted to the gods and the manes is characteristic of the movement of Brāhmaṇical revival which is held to have hegun from ahout the time of the Sungas. The use of the word śūkya to denote a bhikṣu is of special significance. We do not come across such use earlier than in Kuṣān inscriptions where the word śūkyabhikṣu is commonplace and later in the Divyāvadāna.

¹ For references, see Epigraphia Indica, Vol. X, p. 222.

So far for the weakness of the 4th century theory. There are positive evidences of more weight which point to the 1st eentury A.D.

The strongest point in support of the post-Christian origin of the Arthasastra is the structure of the text. It is striking that it not only expounds a methodology of treating a subject which is foreign to earlier works but actually and scrupulously follows that methodology (tantrayuktı). The medical treatise of Susruta which is assigned to about the 2nd century A.D. and the Pali works Nettipakarana and Petakopadesa belonging to about the 1st century A.D. follow the same order and expound it just in the same manner. Suśruta in particular agrees with the Arthasastra in definition and even in the number of the tantrauuktis which is 32 (Uttaratantra LXV). The nomenclature is also the same except that for the Arthasastra's 'upamanam' and 'uttarapaksa' Suśruta substitutes 'anekanta' and 'nirnaya' respectively. The definitions resemble not only in idea but in many cases also in language. A few parallels may be quoted.

Arthasästra

Suśruta

Paramatam-apratisiddham-anumatam.

Atıśayopavarnanam vyāklıyānam.

Abhivyāpyāpakarṣaṇamapavargah, etc., etc.

That Susruta's definitions are a little more elaborate and precise is easily explained by the improvement undergone in a few intervening decades. It may be noted that later literature do not formulate but simply follow the method and in them its divisions evolve and multiply as for example in the Samhita of Caraka which follows 34 sub-divisions (Siddhisthana, XII).

The reference to Cina in the Arthasastra is a distinct pointer to an age much later than the year 249 B.C. when the Ts'in dynasty came to rule in China whence the name Cina was introduced in India. The significant name appears in no Indian literature of proved earlier date. The earliest Pali reference to Cīna and Cīnapatta occurs in the Buddhavamsa and the Apadana (1, 14; 406, 14), the two Pali compilations that were not included in the canon earlier than in the 1st century B.C. The instances in the Epics are evidently later interpolations as is further proved by the different readings in available recensions. To parade their geographical and racial knowledge the pedants of a later age introduced the Cinas, the Sakas, the Yavanas (sometimes even the Romakas and the Parasikas) and other generic terms indicating foreign harbarians along with the indigenous barharians who existed from an older time and

See B. M. Barua: Old Brāhms Inscriptions, p 285.

had place in the original text. These Cînas inhabited the borderlands along the Bablika, the Tibetan valleys and the Pragjyotisa and possibly implied the Mongoloid races percolating from the Himalayan ranges or the people who acknowledged some sort of suzerainty under the Chinese empire (Rāmāysna, IV. 44. 12-14; Mahābhārata, II. 26. 9; 51, 23; III. 176; VI. 9). Their chief produce was skin as well as woollen textile and fabrics of jute and silk in which they specialized along with the people of Bāhlī (pramāna-rāga-sparšādyam bāhlī-cīna-samudbhavam Aurnanca rānkavancarva patajam kīţajantathā, Mbh II.51, 26). In the Artbaśästra Sāmūra, Cīnası and Sāmūlı are skins procured from Vahlava which according to Bhattaswāmī is the name of a country on the Himālayan borders; and the silk and jute fabrics have become famous Chinese luxuries in Indian market (taya kauseyam cīnapaţtaśca cīnabhūmuā vyškļivātāh II. 11). This is reminiscent of the verse in the Buddhavamsa, XXIV. II, which runs as: 'pallunnsm cînspattanca koseyyam kamhalam pi ca.' The statements of the Mahabharata, the Arthasastra and the Buddhavamsa are remarkably parallel and reflect approximately the same age which in the case of the Buddhavamsa cannot be earlier than the 1st century B.C. From Chinese and Indian sources it is definitely known that this flourishing intercourse between China and India began from the dawn of the Christian era.

No less significant is the reference to Ceylonese sandal as 'pārasamudraka' (II. 11, Bhaṭṭaswāmī's commentary). In the Peripius of the Erythrean Sea of which the date is conclusively fixed near about the 6th decade of the 1st century A.D. and in Plny's Natural History which also helongs to the same century, Ceylon is referred to as Palisimundu.' Now Megasthenes knows Ceylon as

t For the identification of Parasomudra with Palisimundu see Raychsudhuri's note in Indian Antiquary, Vol. XLIVIII

Taprobane. The same name is seen in Aśoka's Edicts. The Rāmāyaṇa, however, knows it not only as Tāmraparnī hut also as Siṃhala and Lamkā. Had the name Pārasamudra heen in vogue in the time of the original composition of the Rāmāyana which is not far removed from the heginning of the Maurya Empire it would most prohably have been used hy the author of the Epic. The Arthaśāstra is thus acquainted with a name that seems to have existed in the 1st century A.D. hut not earlier.

The industrial guilds in the Arthaéastra are a constant source of menace and dangerous rival to royal authority. Villages and agricultural operations are protected against their interference. They supply militia to the royal force and are alternately woold or intrigued against by kings. They serve as state banks and hy means of sinister cartels and cornerings influence price. This extraordinary growth of the srenis into an incalculable political and economic force is suggested to have been a later development by a comparative study of the earlier and later Smrtis and post-Christian inscriptions. In Manu and Yājñavalkya the cartel and corner systems are found in full swing, an unwholesome factor in the market raising and lowering price by their machinations. The banking function of the srenis referred to in the Arthasastra (V. 2: VII. 11) is characteristic of a later age of thriving money transactions and speedy circulation of capital, and the earliest evidence we have of such operations is in Usavadāta's Nasik Inscription assigned to the 2nd century A.D.

The emergency tax or sur-tax of pranaya (V. 2) appears in the Arthasastra and in Rudradaman's Junagadh Rock Inscription but in no revenue or fiscal list of earlier literature or inscriptions.² What is more striking is that thus levy is mentioned in the Arthasastra without reference to

Winternitz . History of Indian Literature, Vol. I

See Raychaudhurs . Political History of Ancient India, 4th Edu., p S.

any controversy by the author, a levy on the justice of which there might well he some dispute. It may have heen that the Sakas first introduced it and the earlier teachers were strangers to the tax or the distinct name by which it was known.

The Arthasastra inaugurates the important system of specifying dates in terms of regnal years and months, fortnights and days of an official year (Rajavarşam māsah pakso diyasasca vyustam II. 6). But so far as the written records of Asoka hitherto discovered go he has nowhere mentioned the dates in terms of the year, month and day. It is in the Kuşana records that the datea have been stated for the first time in terms of the regnal year, and in that of the month and the day of an official year, cf. Devaputrasya Kaniskasya sam 5 : he 1 di 1.' The specification of the date in term of the regnal year, and the month, balfmonth and day of an official year as entoined in the Kautiliva Arthasastra is a convention which is met with for the first time in the earliest Sanskrit inscription of Rudradaman (A.D. 150) 'Rudradāmano varse dvisaptatitame (72) Mārgaśīrṣabahulapratıpadāyām ' The convention once established was adhered to in later Sanskrit inscriptions."1

In the state contemplated in the Arthasāstm Sanskrit is the official language. It is almost an established fact that from the time of the Maurya Empire right up to the beginning of the Christian era various forms of Prākrt remained popular and official language while Sanskrit was confined to the cultured few. This is auggested hy coin-legends and inscriptions' as well as by the rise of the two famous grammatical works, that of Patañjali in the north and that of Sarvavarman in the south who moreover preludes his book (Kātantra) by quoting an anecdote to illustrate how ignorant even the kings had become of the sacred language.

t B M. Barua · Asoka Educts in New Light, p. 75.

² See Rhys Davids Buddhtst India, pp 134 36, 317-18

The grammatical works heralded the revival and popularization of Sanskrit to which the Arthasastra is a clear testimony.

The Arthasastra shows intimate acquaintance with the Puranas and with Epic literature not only in its main plot but in many of the subsidiary ākhyānas such as those of Nala, Vātāpi, Māndavya, Dāndakya, etc. and in the theories of the great preceptors and theoreticians who are represented therein. As pointed out by Jolly most of the authorities in the field of political and social sciences quoted in the Arthasāstra figure in the Mahābhārata and these warn against fixing the age of its composition as high as 325 B.C.

These are not to deny that the Arthasastra contains much that must be thrown back to the 4th century B.C. or much carlier. As has been pointed out already, this is the general characteristic of sastra literature that they present an ideal rather than real state of society and often pass earlier opinions as their own. Unlike the Manava Dharmasastra the Arthasastra seems to be the composition of a single author but it does not follow that all he wrote was his own. In fact, he acknowledges his debt to his predecessors, a long list of whom frequently appears in the book. And in the process of taking from carlier authorities with or without acknowledgment theories and practices crept in the text which did not belong to the author's time.

It is tempting to synchronise a great treatiso like the Arthaśāstra with the foundation of the biggest empire of ancient India. But the chicanery and intrigue, the ruthless police methods, the nightmare of sedition, the unscrupulous use of poison and women reflect not the formation of a stable empire, rather its bankruptey and decadence. The vicious theory of circles of states speaks of the mātsyanyāya or primitive anarchy among bundles of independent and semi-independent statelings each with unlimited territorial ambition coalescing and splitting with

kaleidoscopic variety, faithlessness to allies and disrespect for treaties betray ao absence of political morality which evoked scathing denunciation from Bana the representative poet of another empire. The political philosophy of the Artha-sästra fits not so well with Mauya imperialism as with an age of turmoil when local principalities were dissolving in interpecine war.

A possible explanation of the testimony to Kautilyan authorship in later literature may be this. Kautilya or Canakya or Visnigupta may not have been altogether a fictitious figure as supposed by Johnston' and Jolly. He is known both to the Brahmanical tradition of the Mudrārāksasa and Visoupurāna and to the Buddhist tradition of the Mahāvamsa and Manjuśrīmūlakalpa. But had he been the man behind the throne the historians of Alexander who wrote not solely upon Megasthenes' record but utilized plenty of materials now lost to us-Justin, Quintius Curtiua, Arrian, Strabo and Plutarch for example,-would not have dismissed him with silent indifference while naming Candragupta and Nanda. Shamasastri fails to note that no literature earlier than from the 4th century A.D. mentions Kautilya or ascribes to him either the destruction of the Nandas or the composition of the Arthasastra or even quotes from the book. The Miliodapañho, a work believed to be compiled about the 1st century A.D., speaks of Naoda, his geoeral Bhaddasala, their great battle with Candragupta and of the beavy carnage on both sides but not a word about Kautilya. Probably he was boosted by ortbodox Brahmanas during the zeoith of the revivalist movement under the Guptas and it was sought to prove that the king, a Ksatrıya or a Sūdra, was a mere protégé of the Brāhmana chancellor. The claim was bolstered up by the ascription of a masterly digest of

political science to his authorship. The real author who hailed from a later age, remained obscuro and was forgotten, liberally borrowed from earlier savants among whom Kantilya or Cāṇakya was one and may be, the chief, just as several other collections of political maxims were issued under the name of Cāṇakya held or supposed to be a erafty politician of antiquity; and this may be a plausible explanation of the social and political institutions of widely separated ages reflected in the floating doctrines incorporated systematically in the book.

ADDITIONAL NOTES

- P. 46 L. 29. The king is received by grāmaṇīs along with ugras, pratyenasas and sūtas who keep the guest house ready with food and drink (Br. Up. 4. 3. 37).
- P. 76 L. 11. Flesh of the ox is prescribed directly in the Bibadaranyaka Upanisad (6. 4. 18).
- P. 90 L. 30. Earlier literature speaks of 10 kinds of cereals (dhānya) grown in rural areas, viz., vrīhi, yava, tila, māsa, aņu, priyangu, godhāma, masura, khalva, khalakula (kulatiha) (Br. Up. 6. 3. 13).
- P. 361 L. 4. According to Associated Press news of 19th June, 1945, more than 100 silver punch-marked coins helonging to the 4th century B.C. have been found in the Gorakhpur district and acquired by the U. P. provincial museum.
- P. 482 L. 10. The Upanisads give an earlier glimpse into this epic rivalry centering round the issue of animal sacrifice. The priestly and orthodox party upholding animal sacrifice had their stronghold in the Kuru-Pancala country, the heterodoxy led by the Kastriyas was ascendant in the eastern countries of Kāśī, Kośala, Magadha and Videha which are in the Satapatha Brahmana forbidden lands for the pure Brahmana of the Northern Aryan extraction. The Brahmanas there, it is said, had lost their dignity because of submission to the Ksatriyas. In the Brhadaranvaka and the Chandogya, Brāhmana sages are represented as defeated in philosophical disputes with, or as learning philosophical truths from Kṣatriya kings. The culmination of this hostility on ideological plane is seen in the court of Janaka at Videha where Yanavalkya, a Brahmana of the East had a hospitable seat to defeat in polemics the orthodoxy of the North and establish his thesis of Brahmavidya.
